Re: PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT
JOHN STREET PARKING LOT
WEST JOHN STREET
SECTION 11, BLOCK 184, LOT 15
HICKSVILLE, NASSAU COUNTY, NEW YORK
MATRIX NO. 16-144

Dear Mr. Aksman:

Matrix New World Engineering (Matrix) is pleased to present this Phase I Environmental Site Assessment (ESA) Report for the above referenced site.

This report summarizes the findings of the site reconnaissance, the review of historic and current uses of the site to identify contamination by hazardous substances or waste, the review of governmental databases, and the review of other pertinent data. No sampling or laboratory analysis of any media was performed as part of this Phase I ESA. As a result of the Phase I ESA, two Recognized Environmental Conditions (RECs) were identified on the site.

If you have any questions regarding the information contained in this report, please contact us at (973) 240-1800.

Sincerely,

Brian Crespi
Project Manager

Mindy Chassin Horowitz
Program Director

1.0 SUMMARY

Matrix New World Engineering, Land Surveying and Landscape Architecture, P.C. (Matrix) was retained by Gannett Fleming–AECOM Rail Road Expansion Partnership, a Joint Venture between Gannett Fleming Engineers and Architects, PC and AECOM USA, Inc. (the "JV") to provide environmental services to the Metropolitan Transportation Authority (MTA) and Long Island Rail Road (LIRR) in support of the proposed installation of a third track, railway grade crossing separations and/or closures and infrastructure improvements between the Floral Park Station and the Hicksville Station, known as the "LIRR Expansion Project".

As part of the project, Matrix has been retained to complete a Phase I Environmental Site Assessment (ESA) for the West John Street parking lot (Site), Hicksville, Town of Oyster Bay, Nassau County, New York, to be acquired as part of the project. The Phase I ESA has been performed in accordance with Attachment B of the LIRR's Technical Scope of Work (TSOW) for the LIRR Expansion Project from Floral Park to Hicksville (January 2016). The purpose of the Phase I ESA is to gather information to be used in the acquisition process. This Phase I ESA has been prepared in accordance with the American Society for Testing and Materials (ASTM) Designation E 1527-13 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and ASTM Designation E 2600-155 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions.* The following report summarizes the conclusions and opinions representing Matrix's best professional judgment based on information obtained during the Phase I ESA.

1.1 Site Summary

The Town of Oyster Bay owns and operates a parking lot facility in Hicksville, Town of Oyster Bay, New York. The approximately 1.3-acre site is an improved asphalt-paved parking lot. The Site was used for agricultural uses and was naturally-vegetated until it was developed in approximately 1947 as a truck machinery storage area. Around 1980, the truck machinery storage unit was demolished and the Site became a vacant lot. Around 1985, the lot was asphalt paved and from 1994 to the present the Site has been used as a parking lot for the Town of Hicksville.

1.2 Recognized Environmental Conditions

Matrix performed a Phase I ESA of the Site at West John Street in Hicksville, Town of Oyster Bay, New York in general conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 7.3 of this report. This assessment has revealed two RECs in connection with the Site:

- Former industrial use of the property for truck and machinery storage from sometime prior to 1947 to at least 1974. This usage potentially entailed the storage and usage of petroleum products and solvents for maintenance activities, which may have impacted the subsurface.
- Long history of industrial usage on the western adjacent property. The property adjacent to the west of the Site, currently a Hertz car rental facility, was formerly known as Long Island UK Auto and Saturn of Hicksville, located at 125 W John Street and listed on numerous databases, including CESQG, MANIFEST, AST, ECHO, FINDS AND UST and on the NY HIST AUTO database as Long Island UK Auto, which was open in 2008. In 1968, this property was depicted as a tractor repair facility on the Sanborn map. Spills on this property as a result of historic industrial usage could potentially impact the Site, due to its proximity.

1.3 Controlled RECs

Controlled Recognized Environmental Conditions (CRECs) are recognized environmental conditions resulting from a past release of hazardous substances or petroleum products that have been addressed to the satisfaction of the applicable regulatory authority with hazardous substance or petroleum products allowed to remain in place subject to the implementation of required controls. Matrix did not identify any controlled RECs (CRECs), as defined by the ASTM Standard.

1.4 Historical RECs

Historical Recognized Environmental Conditions (HRECs) are recognized environmental conditions resulting from a past release of hazardous substances or petroleum products that have been addressed to the satisfaction of the applicable regulatory authority, without subjecting the property to any required controls. Matrix did not identify any historical RECs (HRECs), as defined by the ASTM Standard.

1.5 De Minimis Conditions

No *de minimis* conditions were observed or identified through interviews or records review of current or historical uses of the Site and adjoining properties.

1.6 Other Findings

The term "other finding" is not defined by ASTM; rather, Matrix uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard. Although not a considered REC based on currently available information, Matrix identified the following other findings based on review of the historical automotive facilities database and the historical dry cleaning database. Sites within 0.1 miles of the Site and at a higher elevation were determined to have the potential to impact the Site should a spill have occurred. These facilities were not

identified on any other databases and there are no records of spills or other known sources of contamination from these facilities.

- The property adjoining the Site to the east (presumed upgradient and at a higher elevation) currently is a storage facility. Formerly, the property was Gilson Residence/Gilson Knitwear located at 65 West John Street. This facility was found on the NY SPILL database (one closed spill remediated to the satisfaction of NYSDEC in 2001). Spills on this property could potentially impact the Site, due to its proximity.

1.7 Significant Data Gaps

- To date, responses to most FOIL requests submitted have not been received. All responses will be forwarded upon receipt with recommendations, if necessary.
- No exact address was provided by the client and so Matrix used publicly available mapping services to determine potential addresses. The potential addresses for this Site are 71-91 West John Street.
- The entirety of the Site was inspected during Matrix's walkthrough, though most of the Site was covered by parked cars, limiting a complete inspection. Furthermore, neighboring properties had snow cover and snow banks, which limited visual observations of the surrounding area.
- A limitation was encountered in determining the historical use of the subject property. The earliest source of historical information reasonably ascertainable within the time frame of this report in which usage could be determined was an aerial photograph from 1938. At the time of the photograph, a portion of the Site appeared to be agricultural field crop land (a developed use per the ASTM Standard). Therefore, the ASTM E1527 requirement to determine all obvious uses of the property from the present back to the property's first obvious developed use, or back to 1940, whichever is earlier, could not be achieved. However, based upon the identified agricultural land use, it is unlikely that there had been significant prior development; therefore, this data failure is not expected to impact the results of this assessment.

1.8 Non-scope Considerations

Matrix did not identify any non-scope considerations.

2.0 INTRODUCTION

2.1 Purpose

This Phase I ESA Report has been prepared by Matrix for LIRR for the property located at West John Street (Section 11, Block 184, Lot 15) in Hicksville, Town of Oyster Bay, Nassau County, New York (Site). The objective of the Phase I ESA is to evaluate whether current or historical practices associated with the Site or nearby properties have the potential to have created, or to create in the future, a Recognized Environmental Condition (REC) at the Site. The term REC is defined by ASTM Standard 1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on or at a property due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. Historic information and current conditions and operations pertaining to the Site are addressed in this report.

2.2 Detailed Scope-of-Services

The scope of services for this project included a visual reconnaissance of the Site and neighboring properties; review of readily available Federal, state, and local regulatory records; examination of historic information and evaluation of current and past operations and activities on-site. Matrix reviewed/utilized historic aerial photographs, Sanborn Fire Insurance Maps, historic topographic maps and city directories as part of the Phase I ESA. Additionally, a regulatory database search was conducted by Environmental Data Resources Inc. (EDR), of Shelton, Connecticut for information available in governmental databases. The EDR Radius Map Report is provided in Appendix A.

The Phase I ESA also included an initial vapor encroachment screening (VES) to determine if there is a potential for vapors to occur in the subsurface below existing and/or proposed on-site structures from those hazardous substances, petroleum and petroleum products that consist of volatile organic compounds (VOC), semi-volatile organic compounds (SVOC) and inorganic volatile compounds. The VES meets the Tier 1 “non-invasive” screening requirements of ASTM E2600-13.

2.3 Significant Assumptions

Information and records provided by the client, government agencies, and outside vendors retained by Matrix are assumed to be correct and complete.

2.4 Limitations and Exceptions

This Phase I ESA has been prepared for the exclusive use of MTA, LIRR and the JV. It represents a professional opinion and judgment based on information supplied by the present owner of the Site, information collected by

Matrix, and additional data and information provided by governmental agencies. Matrix only warrants that it provides services in accordance with generally-accepted practices in the engineering/environmental site assessment field. No other warranty or representation, either expressed or implied, is included or intended as part of its services, proposals, contracts, or reports. Matrix cannot guarantee, certify, or warrant that the Site is, or is not, free of environmental impairment/liabilities without conducting a site-specific subsurface investigation involving soil and groundwater laboratory analyses. Even with such a program, the data and samples from any given soil boring or monitoring well will indicate conditions that exist only at that location, and may not necessarily apply to the Site as a whole.

In preparing this report, Matrix has relied on certain information provided by Federal, state, county and local officials and other parties referenced herein, and on file of government agencies and others that were readily available at the time of this assessment. Although there may have been overlap of this information provided by these various sources, Matrix did not attempt to independently verify the accuracy or completeness of information reviewed or received during the course of this Phase I ESA.

Observations were made on all portions of the Site as indicated in the report.

As part of this assessment, Matrix submitted requests for information via the Freedom of Information Act (FOIA) to various governmental agencies. As of the preparation of this report, these requests may not have been fulfilled. The conclusions of this report are subject to change upon receipt of a response from these FOIA requests.

Mold, indoor air quality, asbestos, and lead-based paint surveys are excluded from the scope of this report.

2.5 Special Terms and Conditions

There are no special terms or conditions to the content of the report that are in addition to the scope outlined in Section 2.2.

2.6 User Reliance

This Phase I ESA was performed at the client's request utilizing a format consistent with the table of contents and report format specified in ASTM E 1527-13 Appendix X4.

This assessment is intended, where applicable to the standard of care, to satisfy the requirements of the ASTM Standard Practice for Environmental Site Assessments, as published in ASTM E1527-13. The independent conclusions represent the best professional judgment of the Environmental Professional based on the conditions

that existed and the information and data available to Matrix during the course of this assignment. Factual information regarding operations and conditions provided by the Client, owner, or the representative has been assumed to be correct and complete. The report may be distributed and relied upon by MTA, LIRR and the JV. Reliance on the information and conclusions presented in this report by other party(ies) is not authorized by Matrix, unless specifically stated.

3.0 SITE DESCRIPTION

On March 16, 2017, a site reconnaissance was conducted by Jordan Farber, Environmental Scientist, of Matrix to evaluate current land usage and identify any RECs that may be present throughout accessible portions of the Site and surrounding areas. Appendix B contains photographs taken during the site reconnaissance.

3.1 Location and Legal Description

The Site is located on West John Street, Hicksville, Town of Oyster Bay, Nassau County, New York. The Site consists of one parcel (Section 11, Block 184, Lot 15) which is an asphalt-paved parking lot.

The Site consists of approximately 1.32 acres and is geographically located at 40° 46' 4.04" north latitude and 73° 31' 51.54" west longitude on the Hicksville, New York, U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle. A Regional Location Map and Topographic Map depicting the Site are presented as Figures 1 and 2, respectively. A Tax Map is presented as Figure 3.

3.2 Site General Characteristics

The Site consists of an asphalt-paved parking lot.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map (Hicksville, New York, 2013);	The Site is about 140 foot above mean sea level (amsl).
Topographic Gradient	USGS topographic map;	Relatively flat on-site, with a gentle downward slope to the north.
Hydrology		
Surface Water Runoff	Visual observations	Entire site is paved. Surface water enters storm drains that discharge to the municipal storm sewer system.
Nearest Surface Water Body to the Site	USGS topographic map;	Wantagh Reservoir, located approximately 5 miles to the southeast at its nearest point. The Reservoir ultimately discharges to the Seaman Pond.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Flood Plain	FEMA	No known occurrences of flooding at the Site. The Site is not located within a 500-year flood zone. The FEMA Flood Insurance Rate Map (FIRM) is included in Appendix J.
Wetlands	NWI*; Visual observations	There are no federally-designated wetlands on-site. Matrix did not identify any obvious suspected wetlands at the Site during the site visit.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map	Based on the topographic gradient sloping to the west/southwest, shallow groundwater likely flows to the southwest.
Depth to Groundwater	USGS	Specific information regarding depth to shallow groundwater was not readily available, but is expected to be at least 51 feet below ground surface, based on the USGS Long Island Depth to Groundwater Viewer[1]
On-Site Wells	Visual observations;	There are no production, monitoring, or injection wells on-site.
Nearest Groundwater Supply Wells	EDR database report	There are no federally registered public groundwater supply wells within a one-mile radius of the Site.
Geologic Conditions	EDR database report	Regional soils are identified as Urban land.
Site Utility Information		
Heating and Cooling Equipment	Visual observation	There are no interior areas and thus no heating or cooling equipment associated with the Site.
Electricity Supplier	Visual observation	There is no electricity service at the Site.
Natural Gas Supplier	Visual observation	There is no natural gas service at the Site.
Use of Fuel Oil for Building Heat	Visual observation	No current or former use of fuel oil reported.
Water Supplier	Visual observation	Hicksville
Sanitary Sewer	Visual observation	Nassau County Sewage Disposal District #3

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Stormwater Sewer	Visual observation	A storm water drain system was observed in the southern portion of the Site during the Site. No drainage swales or culverts were observed on exterior portions of the Site during the Site reconnaissance. Stormwater is handled by Nassau County Sewage Disposal District #3.
Septic Systems	Visual observation	No current or former septic systems reported.

Notes:

FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey NWI = National Wetlands Inventory

* - Source was provided in the EDR database report.

1 - https://ny.water.usgs.gov/maps/li-dtw10/.

3.3 Current Use of the Property

According to http://lrv.nassaucountyny.gov/, the Site is currently owned by the Town of Oyster Bay and used as a municipal parking lot. A Site Plan is presented as Figure 4.

3.4 Description of Structures, Roads, Other Improvements On-Site

The Site consists of one parcel which is an improved square-shaped, asphalt, parking lot. West John Street is to the north of the Site, West Barclay Street is to the south of the Site, a storage facility is adjacent to the east of the Site, and a Hertz car rental is adjacent to the west of the Site.

3.5 Current Uses of the Adjoining Properties

The property is located in a mixed residential/commercial land use area. The nearest residential area is located approximately 460 feet west of the Site. Based on discussions with facility personnel, Matrix's visual observations from the property boundary and public rights-of-way, and a limited review of publicly available information, a general determination of the current use of adjacent properties was developed, as described Table 2.

Table 2: Current Use of Adjacent Properties

Direction	Property/Land Use	Matrix's Observations
North	West John Street, an asphalt-paved parking lot, Hicksville Fire Department Training Facility, Kiddie Academy, Broadway Dental and Family Aids Inc. Beyond that, Northern State Parkway and Broadway Mall. Northwest of the Site is Cantaigue Park	Pole-mounted transformers were observed along West John Street. No staining was observed. No apparent exterior manufacturing or chemical storage operations were observed. No concerns were noted
East	Life Storage self-storage facility and beyond that are Routes 106 and 107.	No apparent exterior manufacturing or chemical storage operations were observed. No concerns were noted
South	Barclays Street, Hicksville Water District Plant No.11, beyond that is an asphalt-paved parking lot and further south are the LIRR Main Line train tracks.	Pole mounted transformers were observed along Barclays Street. No staining was observed. A pad-mounted transformer was observed at the Hicksville Water District Plant. No staining was observed.
West	Hertz car rental and beyond that, Marian Place, The Finishing Touch-Fine Linen Rental and U.S. Post office. Beyond that is Wantagh State Parkway.	No apparent exterior manufacturing or chemical storage operations were observed. No concerns were noted

Notes:
During the site visit, Matrix walked or drove by the borders of these properties that are shared with the subject site. Matrix did not enter the neighboring properties.

3.6 Reason for Performing Phase I

Matrix was retained by MTA, LIRR and the JV to perform a Phase I ESA as part of a due diligence evaluation prior to property acquisition.

3.7 Other

No additional information regarding the Site was provided.

4.0 RECORDS REVIEW

4.1 Standard Environmental Record Sources

A regulatory review of the Site and surrounding area was conducted through a search by EDR dated March 1, 2017. The review included inquiries into databases maintained by USEPA, as well as state agencies. A brief description of each database and the search results obtained during the Phase I ESA is presented below, for those databases where records were found within the corresponding search radii. The EDR Radius Map Report in its entirety is attached as Appendix A. The search was conducted in general accordance with ASTM E1527-13 standards. The Site was identified on the following databases searched by EDR: SWF/LF; however, this is an erroneous listing as it is for Ago Associates, located at 449 West John Street.

Federal Records

1. Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP): The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses

[1] The Site is erroneously listed on this database; the listing is for Ago Associates, located at 449 West John Street.

to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

The Site was not identified on the Delisted NPL database. No Delisted NPL facilities were identified within a 1/8-mile or 1/4-mile radius of the Site. One Delisted NPL facility was identified between ½ - mile and 1-mile radius. Based on the distance to the Site, there is limited potential for impact to the Site from the Delisted NPL facility. The Delisted NPL data was last updated on December 5, 2016 (EDR Inc., 2017).

2. Resource Conservation and Recovery Act (RCRA) Corrective Action Sites (CORRACTS): CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

   The Site was not identified on the CORRACTS database. No CORRACTS facilities were identified on the CORRACTS database within a ⅛-mile or ¼-mile radius of the Site. One CORRACTS facility was identified on the CORRACTS database between a ½-mile and 1-mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from the CORRACTS facility. The CORRACTS data was last updated on December 12, 2016 (EDR Inc., 2017).

3. Resource Conservation and Recovery Act (RCRA)-Large Quantity Generators (LQGs)- The RCRA-LQG database is US EPA's comprehensive information system, providing access to data supporting the 1976 RCRA and the 1984Hazardous and Solid Waste Amendments (HWSA). The database includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Large quantity generators (LQG) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

   The Site was not identified on the RCRA-LQG database. No RCRA-LQG facilities were identified within a ⅛-mile radius of the Site. One RCRA-LQG facility was identified between ⅛ mile and ¼-mile radius of the Site. 110 Duffy Avenue is at higher elevation than the Site and identified as a historical generator for tetrachloroethylene (D039) and trichloroethylene (D040). Additionally, no violations were found. Based on this information, there is limited potential for impact to the Site from this RCRA-LQG facility should a release occur. No RCRA-LQG facilities were identified between ¼-mile and 1-mile radius of the Site. The RCRA-LQG data was last updated on December 12, 2016 (EDR Inc., 2017).

4. Resource Conservation and Recovery Act (RCRA)-Small Quantity Generators: The RCRA-SQG database is USEPA's comprehensive information system, providing access to data supporting the 1976 RCRA and the 1984 Hazardous and Solid Waste Amendments (HWSA). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. SQGs generate between 100 kilograms (kg) and 1,000 kg of hazardous waste, hazardous waste per month.

   The Site was not identified on the RCRA-SQG database. No facilities were identified on the RCRA-SQG database within ⅛-mile radius of the Site. One RCRA-SQG facility was identified between a ⅛-mile and ¼-mile radius of the Site. AAAA-1 Auto Body is located at 112 Duffy Avenue at a lower elevation than the Site. AAAA-1 Auto Body is a generator of benzene (D018), methyl ethyl ketone (D035), nonhalogenated solvents (xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol) (F003), and additional nonhalogenated solvents (toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyanol, and 2-nitroporpane [F005]). Violations for this property have been received. On April 24, 2013, AAAA-1 Auto Body received two violations for Pre-Transport of Generators and Preparedness and Prevention. The violations were corrected and the cases were closed on July 1, 2013. Based on the information provided, there is limited potential for impact to the Site

from this RCRA-SQG facility. No RCRA-SQG facilities were identified between ¼-mile and 1-mile radius of the Site. The RCRA-SQG data was last updated on December 12, 2016. (EDR Inc., 2017).

5. Resource Conservation and Recovery Act (RCRA)-Conditionally Exempt Small Quantity Generator (CESQG): The RCRA-CESQG database is USEPA's comprehensive information system, providing access to data supporting the 1976 RCRA and the 1984 Hazardous and Solid Waste Amendments (HWSA). The database includes selective information on sites which generate, transport, store, treat and/or dispose hazardous waste as defined by RCRA. CESQGs generate less than 100 kilograms (kg) of hazardous waste, or less than 1 kg of acutely hazardous waste per month. The RCRA-CESQG database is administered by the EPA.

   The Site was not identified on the RCRA-CESQG database. One RCRA-CESQG facility was identified within a ⅛-mile radius of the Site. Saturn of Hicksville (currently a Hertz rental facility) is located at 125 West John Street, adjacent to the west of the Site and at a higher elevation than the Site. Saturn of Hicksville is identified as a historic generator of ignitable waste (D001), cadmium (D006), lead (D008), tetrachloroethylene (D039), and trichloroethylene (D040) in 1998, 1999, and 2006. No violations were found for this RCRA-CESQG facility. Additionally, this property is identified on the FINDS and ECHO databases. Based on the site location being upgradient from and adjacent to the Site, there is potential for impact to the Site from this RCRA-CESQG facility should a release occur. Based on its proximity to the Site and multiple listings on various databases described in this section, this facility is considered a REC.

   One RCRA-CESQG facility was identified between ⅛-mile and ¼-mile radius of the Site. Bouchard Oil Transportation located at 77 Newbridge Road, at a higher elevation than the Site. No violations have been identified for Bouchard Oil Transportation. No additional information about the facility was provided. Based on this information, there is a limited potential for impact to the Site from this RCRA-CESQG facility should a release occur. No RCRA-CESQG facilities were identified between ¼-mile and 1-mile radius of the Site. The RCRA-CESQG data was last updated on September 12, 2016 (EDR Inc., 2017).

State Records

6. Known Contaminated Sites Administered by NYSDEC (NY State Hazardous Waste Site [SHWS]) Database: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These Sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites were cleanup will be paid for by potentially responsible parties. The data come from the NYSDEC's Inactive Hazardous Waste Disposal Sites list.

   The Site was not identified as a SHWS facility. No SHWS facilities were identified within a ½-mile radius of the Site. Eight SHWS facilities were identified between a ½-mile and a 1-mile radius of the Site. Based on their distances to the Site, there is limited potential for impact to the Site from these SHWS facilities. The SHWS data was last updated on June 30, 2016 (EDR Inc., 2017).

7. NY Vapor Reopened: Vapor intrusion refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in the analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

The Site was not identified as a NY Vapor Reopened facility. No NY Vapor Reopened facilities were identified within a ½-mile radius of the Site. Four NY Vapor Reopened facilities were identified between a ½-mile and 1-mile radius of the Site. Based on their distances to the Site and closed case statuses, there is limited potential impact to the Site from these NY Vapor Reopened facilities. The NY Vapor Reopened database was last updated on June 1, 2016 (EDR Inc., 2017).

8. New York Solid Waste Facilities/Landfill Sites (NY SWF/LF): Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities, landfills or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal.

   The Site was erroneously mapped in the EDR database as Ago Associates, West John Street, under the NY SWF/LF facility. Ago Associates is located at 449 West John Street, greater than ½-mile from the Site. The database summary for the Ago Associates indicates that the site is inactive. In addition, the activity description is landfill-construction and demolition debris per the NY SWF/FD database. No additional information about this listing was provided. Based on the distance to the Site, there is limited potential impact to the Site from this listing. No other NY SWF/LF facilities were identified within a 1-mile radius of the Site. The NY SWF/LF database was last updated on January 10, 2017 (EDR Inc., 2017).

9. New York Leaking Storage Tank Incident Reports (NY LTANKS): NY LTANKS contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking above ground storage tanks. The causes of the incidents are tank test failures, tank failure, or tank overfills.

   The Site was not identified as a NY LTANKS facility. One NY LTANK facility was identified within ⅛-mile radius of the Site.

   - A residence located at 20 Wyckoff Street, at a higher elevation than the Site. This facility is a private dwelling and had a tank failure on April 4, 1995. There was a known release, approximately 1 gallon of No. 2 fuel oil. NYSDEC was notified and spill No. 9500106 was assigned to this facility. The Corrective action was completed and the case was closed on April 4, 1995. Based on the quantity spilled and closed status, there is no potential for impact to the Site from this NY LTANK facility.

   Four NY LTANK facilities were identified between ⅛-mile and ¼-mile of the Site.

   - Federal Express Corp is located at 201 West John Street at a higher elevation than the Site. This commercial/industrial facility had a spill due to tank test failure. There was a known gasoline spill into the groundwater on August 25, 1995. NYSDEC was notified and Spill No. 9506499 was assigned. The spill case was closed on March 28, 1996. This facility is also listed under the FINDS, RCRA NonGen/NLR, ECHO, SPILLS, and NCFM UST database. Based on the information provided, there is limited potential for impact to the Site from this NY LTANK facility.
   - Phillips Int'l Hold Corp is located at 25 West Marie Street at a higher elevation than the Site. This commercial/industrial facility had a spill due to tank test failure on December 20, 1990. There was a known spill that release #2 fuel oil. NYSDEC was notified and Spill Number 90010243 was assigned. The case was closed for this facility on March 7, 1991. Based on the information provided, there is limited potential for impact to the Site from this facility.
   - Chemical Bank is located at 100 Duffy Avenue at a higher elevation than the Site. This commercial/industrial facility had a spill of #2 fuel oil due to tank test failure on July, 11, 1994. NYSDEC was notified and Spill Number 9404966 was assigned. The case was closed for this facility on November 8, 1994. This facility was also identified on the SPILLS database assigned to

the same case number. Based on the information provided, there is limited potential for impact to the Site from this facility.

- R Kadia Residence is located at 153 West Marie Street at a higher elevation than the Site. This facility is a private dwelling that had a known release due to a tank failure. Two gallons of # 2 fuel oil spilled from the tank on November 5, 1994. NYSDEC was notified and Spill No. 9410435 was assigned. The case was closed on November 7, 1994. Based on the information provided, there is limited potential for impact to the Site from this facility.

Sixteen facilities were identified on the NY LTANKS data base between ¼-mile and ½-mile radius from the Site. Based on the distance of these facilities to the site, there is limited potential for impact to the Site from these facilities. NY LTANKS database was last updated on February 6, 2017 (EDR Inc., 2017).

10. New York Underground Storage Tank (NY UST): The underground storage tank database contains registered USTs, regulated under Subtitle I of the RCRA. The data come from the NYSDEC Petroleum Bulk Storage (PBS) Database.

    The Site was not identified as a NY UST facility. One NY UST facility was identified within a ⅛-mile radius of the Site. Saturn of Hicksville (currently a Hertz rental facility) is located at 125 W John Street, adjacent to the Site to the west This facility had a UST that was installed on September 1, 1961. According to the EDR database, the tank has been removed. No tank closure dates or information was provided. This facility was also identified on the FINDS, RCRA-CESQG, ECHO, and NY MANIFEST databases. Based on the facility being adjacent to the Site, there is potential for impact to the Site from this facility. Based on its proximity to the Site and multiple listings, this facility is considered a REC

    Six NY UST facilities were identified between ⅛-mile to ¼-mile radius of the Site. Due to the distance of the facilities to the Site, there is limited potential to impact the Site from these facilities. The NY UST database was last updated on February 10, 2017 (EDR Inc., 2017).

11. New York Major Oil Storage Facility (NY MOSF): These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater.

    The Site was not identified as a NY MOSF facility. No facilities were identified within ¼-mile radius of the Site. One NY MOSF facility was identified between a ¼-mile and ½-mile radius of the Site. Based on the distance of the facility to the Site, there is no potential for impact to the Site from this NY MOSF facility. The NY MOSF database was last updated on December 28, 2016 (EDR Inc., 2017).

12. New York Above Ground Storage Tanks (NY AST): The AST database contains registered ASTs. The data comes from NYSDEC's Petroleum Bulk Storage (PBS) Database.

    The Site was not identified as a NY AST facility. One facility was identified as a NY AST within ⅛-mile radius of the Site. Saturn Service HICKS (also known as Saturn of Hicksville on other databases and currently a Hertz rental facility) is located at 125 West John Street at a higher elevation than the Site. Two ASTs are currently in-service at this facility. Tank 001 is a 280-gallon double-walled waste oil AST. Tank 002 is a 500-gallon double-walled Motor Oil AST. No violations were identified in relation to the ASTs. Based on the information provided, there is potential for impact to the Site from this NY AST facility if a spill were to occur. Based on its proximity to the Site and multiple listings, this facility is considered a REC.

    Three NY AST facilities were identified between ⅛-mile and ¼-mile radius of the Site. Based on the distance of the facilities to the Site, there is no potential for impact to the Site from the NY AST facilities. The NY AST database was last updated on February 10, 2017 (EDR Inc., 2017).

13. New York Institutional Control (NY INST CONTROL): Environmental Remediation Sites that have institutional controls in place.

    The Site was not identified as a NY INST CONTROL facility. No facilities were identified as a NY INST CONTROL within ¼-mile radius of the Site. One facility was identified as a NY INST CONTROL between ¼-mile and ½-mile radius of the Site. Based on the distance and the elevation of the facility there is no potential for impact to the Site from the NY INST CONTROL facility. The NY INST CONTROL database was last updated on November 14, 2016 (EDR Inc., 2017).

14. New York Brownfields (NY BROWNFIELDS): Brownfields Site List.

    The Site was not identified as a NY BROWNFIELD facility. No facilities were identified as a NY BROWNFIELD within ¼-mile radius of the Site. One facility was identified as a NY BROWNFIELD between ¼-mile and ½-mile radius of the Site. Based on the distance and elevation from the Site, this facility does not have potential to impact the Site. The NY Brownfield was last updated on November 14, 2016. (EDR Inc., 2017).

Records of Emergency Release Reports

15. New York Spills (NY SPILLS): Data collected on spills reported to the NYSDEC is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, through today.

    The Site was not identified as a NY SPILLS facility.

    Four NY SPILLS facilities were identified within ⅛-mile radius of the Site:

    - Gilison Residence is located at 65 West John Street, immediately adjacent, upgradient, and at a higher elevation than the eastern side of the Site, was identified as a NY SPILL site. On April 11, 2001, a # 2 fuel oil spill was identified during a UST removal. The NYSDEC was informed and Spill No. 0100418 was assigned. Soil was impacted, corrective action was taken and the case was closed on August 5, 2001. Based on its proximity to the Site, this facility is considered an other finding as defined by Matrix.
    - Waler Maure, located at 145 West John Street at a higher elevation than the Site, was identified as a NY SPILL site. On December 10, 1993, a traffic accident caused a spill of approximately 3 gallons of gasoline. NYSDEC was notified and Spill No. 9311048 was assigned. Corrective action was taken and the case was closed on December 23, 1993. Based on the status of this case, the location of the property, and the information provided, there is no potential for impact from this NYS DEC facility to the Site.
    - Hicksville Post Office is located at West John Street and Maple Place and is at a higher elevation that the Site. Two spills have been recorded here. (1) On May 26, 2006, equipment failure caused a dielectric fluid spill of approximately 4 gallons. NYSDEC was notified and Spill No. 0602140 was assigned. Corrective action was taken and the case was closed on August 2, 2006. Based on the information provided, there is no potential for impact from Site for NY SPILLS database. (2) On August 28, 2009, a spill of approximately 4 gallons of transformer oil occurred in a vault. The spill was cleaned up and the spill number closed on February 5, 2010. This facility is also identified on the UST, RCRA NON GEN/NLR and MANIFEST database. Based on the closed status of these spills and the quantities spilled, there is limited potential for impact to the Site. Based on its proximity to the Site and listings on multiple databases, this facility is considered an other finding.
    - An unknown residence, located at 172 West John Street at a higher elevation than the Site, was identified as a NY SPILL. On July 5, 2011 equipment failure caused a spill of approximately 5 gallons of transformer oil. NYSDEC was notified and Spill No.1103704 was assigned. Corrective

action was taken and the case was closed on November 4, 2011. Based on the information provided, there is no potential for impact from Site.

This NY SPILLS database was last updated on November 25, 2013 (EDR Inc., 2017).

Other Ascertainable Records

16. Resource Conservation and Recovery Act Non-Generator (RCRA NON-GEN/NLR): EPAs comprehensive information system, providing access to data supporting the 1976RCRA and the 1984 HSWA. The database includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by the RCRA. Non-Generators do not presently generate hazardous waste.

    The Site was not identified as a RCRA NON-GEN/NLR facility. No RCRA NON-GEN/NLR facilities were identified within ⅛-mile radius of the Site. Nine RCRA NON-GEN/NLR facilities were identified within ⅛-mile and ¼-mile of the Site. Based on the information provided and the distance of these facilities to the Site, there is no potential for impact from this RCRA NON-GEN/NLR facility to the Site. This RCRA NON-GEN/NLR database was last updated on December 12, 2016 (EDR Inc., 2017).

17. Record of Decision (ROD): ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

    The Site is not identified as a ROD facility. No ROD facilities were identified within ½-mile radius of the Site. One ROD facility was identified between ½-mile and 1-mile radius of the Site. Based on the information provided and the distance of the facility to the Site, there is no potential for impact from this ROD facility to the Site. This ROD database was last updated on November 25, 2013 (EDR Inc., 2017).

18. CONSENT: Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by U.S. District Courts after settlement by parties to litigation matters.

    The Site is not identified as a CONSENT facility. No CONSENT facilities were identified within ½-mile radius of the Site. Two CONSENT facilities were identified between ½-mile and 1-mile radius of the Site. Based on the information provided and the distance of the facilities to the Site, there is no potential for impact from this CONSENT facility to the Site. This CONSENT database was last updated on January 30, 2017 (EDR Inc., 2017).

19. New York Manifest (NY MANIFEST): Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

    The Site is not identified as a NY MANIFEST facility. One NY MANFIEST facility was identified within ⅛-mile radius of the Site. Saturn of Hicksville (currently a Hertz rental facility) is located at 125 W John Street at a higher elevation than the Site. The facility is identified as shipping manifested waste for waste codes D001 from 1999 to 2008 as well as D039 in 2008. Based on the elevation relative to the Site, there is potential for impact to the target property should a spill occur from the NY MANIFEST facility. Based on its proximity to the Site and listings on multiple databases, this facility is considered a REC. Seven NY MANIFEST facilities were identified between a ⅛-mile and ¼-mile radius of the Site. Based on the distance from the facilities to the Site, there is no potential for impact from the NY MANIFEST facilities to the Site. This NY MANIFEST database was last updated on January 30, 2017 (EDR Inc., 2017).

20. New Jersey Manifest (NJ MANIFEST): Hazardous waste manifest information.

    The Site is not identified as a NJ MANIFEST facility. No NJ MANIFEST facilities were identified within ⅛-mile radius of the Site. One NJ MANIFEST facility was identified between a ⅛-mile and ¼-mile radius of the Site. Based on the elevation of the facility and the distance from the Site, there is no potential for impact to the Site from the NJ MANIFEST facility. This NJ MANIFEST database was last updated on December 31, 2015 (EDR Inc., 2017).

21. Pennsylvania Manifest (PA MANIFEST): Hazardous waste manifest information.

    The Site is not identified as a PA MANIFEST facility. No PA MANIFEST facilities were identified within ⅛-mile radius of the Site. One PA MANIFEST facility was identified between a ⅛-mile and ¼-mile radius of the Site. Based on the elevation of the facility and the distance from the Site, there is no potential for impact to the Site from the PA MANIFEST facility. This PA MANIFEST database was last updated on December 31, 2015 (EDR Inc., 2017).

EDR Recovered Government Archives

22. EDR Historical Auto (EDR HIST AUTO): EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of source that might in EDR's opinion, include gas station/filling station /service station establishments. The categories reviewed included, but were not limited to: gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

    The Site is not identified as an EDR HIST AUTO facility. One EDR HIST AUTO facility was identified within ⅛-mile radius of the Site. This property, Long Island UK Auto, is located at 125 W John Street, referenced in other databases as Saturn of Hicksville (currently a Hertz rental facility), at a higher elevation than the Site. The historical auto station was open in 2008. Based on the distance of the EDR HIST AUTO facility and the information provided, there is potential for impact to the Site from this facility. Based on its proximity to the Site, this facility is considered a REC. The EDR HIST AUTO facility was last updated on February 20, 2007 (EDR Inc., 2017).

4.2 Additional Environmental Record Sources

Matrix contacted the USEPA, NYSDEC, Nassau County Clerk, Nassau County Fire Department and the Oyster Bay Municipal Clerk regarding environmental files for the Site. Copies of FOIL requests and responses are provided in Appendix C.

Responses from all the agencies requested have not been received at this time. Nassau County Clerk, NYSDEC, and the USEPA were the only agency to respond at this time The Nassau County Clerk and the NYSDEC were unable to complete this request with an unknown mailing address. No findings were provided in the USEPA's FOIL request.

4.3 Historical Use Information on the Property and Surrounding Properties

4.3.1 Sanborn Maps

A search was made through EDR for historical Sanborn Fire Insurance (Sanborn) maps for the Site and surrounding properties. Fire insurance maps were initially produced by private companies for the insurance industry to provide information on fire risks to buildings and other structures. Fire insurance maps serve as an historical resource for evaluating the potential for site contamination based on history of past use. Sanborn maps were reviewed for the years 1908, 1917, 1925, 1947 and 1968. However, the Site is only identified on the 1968 Sanborn. A copy of the Sanborn Map Report is included in Appendix D.

1908 Sanborn Fire Insurance Map (1" =600')

The Site is not illustrated; however, the areas north and northeast of the Site are depicted. North of the Site and John Street, three dwellings with associated outbuildings were constructed. Strong Street (unlabeled) and Wyckoff Street appear to the northeast of the Site. The area northeast of the Site is also residential with various dwellings depicted. No other information is provided.

1917 Sanborn Fire Insurance Map (1" =600')

The Site is not illustrated on this map; however, the areas north and northeast of the Site are depicted. no occurred. No substantial changes were identified since the 1908 Sanborn Fire Insurance Map.

1925 Sanborn Fire Insurance Map (1" =600')

The Site is not illustrated on this map; however, the areas north, northwest and northeast of the Site are depicted. To the north of the Site, four additional dwellings were constructed. The name of John Street has changed to West John Street. Dwellings are shown along the north side of West John Street to the northwest. No additional substantial changes were identified since the 1917 Sanborn Insurance Map.

1947 Sanborn Fire Insurance Map (1" = 600')

The Site is not illustrated on this map; however, the areas north, northwest and northeast of the Site are depicted. No substantial changes have been identified since the 1925 Sanborn Fire Insurance Map.

1968 Sanborn Fire Insurance Map (1" = 600')

The Site is developed with a one-story U-shaped Truck and Machinery Storage building covering the southeastern quarter of the lot. No other information is provided about the Site. To the north, additional dwellings, office buildings, and a fire station were constructed. Two properties east of the Site are shown as a parking lot. Further east, Gilison Knitwear Co. Inc., a knitting mill, is shown as having been constructed in 1962. A tractor repair

facility and dwelling were constructed immediately adjacent to the west of the Site. Further west, Marion Place and a truck repair shop have been constructed. To the south of the Site, West Barclay Street is shown. South of West Barclay Street there is a truck and machinery storage unit called Karlson & Reed, Inc. Contractors and a beverage and beer depot call Pabst Brewing Co. Further south, the Long Island Railroad tracks are depicted in their current location. No additional substantial changes were identified since the 1947 Sanborn Fire Insurance Maps.

4.3.2 Aerial Photographs

An inquiry was made with EDR to obtain historical aerial photographs for the Site. Aerial photographs were reviewed for the years 1938, 1947, 1953, 1957, 1962, 1966, 1970, 1974, 1980, 1985, 1994, 2006, 2009 and 2011. These photographs were used to determine past land usage and major improvements to the Site and surrounding area. Copies of EDR aerial photographs are included in Appendix E.

1938 Aerial Photograph (1" = 500')

The 1938 aerial photograph indicates that the Site is cleared and not developed with any buildings. What appears to be a dirt road or path has been constructed running diagonally through the site (northwest corner to southeast corner), which indicates usage of the property. West John Street is shown along the northern border, West Barclay Street long the southern border, and Marion Place is shown to the west of the Site. The adjacent property to the west appears to be residential. The LIRR tracks are approximately 400 ft. to the south of the Site. In addition, commercial/industrial/farming buildings were constructed south of Barclay Street just north of the LIRR tracks. The surrounding area indicates a mixture of residential areas and farmland in all directions.

1947 Aerial Photograph (1" = 500')

The 1947 aerial photograph indicates a U-shaped building was constructed on the south-eastern portion of the Site. The path across the property is no longer present. The remainder of the Site is vacant. A small building has been developed on the property adjacent to the east of the site. Beyond that property to the east, a large commercial or industrial building was constructed, which on the 1968 Sanborn map is labeled as Gilison Knitwear Co. Inc., a knitting mill. Additional residential structures have been developed northwest of the Site. Directly south of the Site consists of commercial/industrial buildings that have been constructed. No additional significant changes have occurred since the 1938 aerial photograph.

1953 Aerial Photograph (1" = 500')

The 1953 aerial photograph shows the U-shaped building unchanged, with the remainder of the Site used as a parking lot. In addition, trucks are captured in the photograph parking on the northern portion of the Site. No

additional significant changes have occurred on the Site. Additional residential properties have been constructed to the north, east, and west direction of the Site. The properties to the south look commercial or industrial. No additional significant changes have occurred in the surrounding areas since the 1947 aerial photograph.

1957 Aerial Photograph (1" = 500')

The 1957 aerial photograph indicates no significant changes have occurred to the Site since the 1953 aerial photograph. No additional significant changes have occurred in the surrounding areas since the 1953 aerial photograph.

1962 Aerial Photograph (1" = 500')

The 1962 aerial photograph indicates that the majority of the trucks that were located at the northern portion of the Site are no longer present, which may indicate that the photo was taken over a weekend. No additional significant changes have occurred to the Site. No additional changes have occurred to the surrounding area since the 1957 aerial photograph.

1966 Aerial Photograph (1" = 500')

The 1966 aerial photograph does shows a P shaped dirt road was constructed in the northern portion of the Site, no other significant changes occurred to the Site. Since the 1962 aerial photograph, the two properties east of the Site has constructed an addition to its building. A rectangular building was constructed on the adjacent property to the west. A large building was constructed in between West Barclay Street and Marion Place. The two rectangle buildings that were located south of West John, adjacent to the west of the Site were demolished. Further west of the Site (approximately 800 ft.) a large rectangle building was constructed. This building is located East of Holman Boulevard, and south of West John Street. The small buildings that were previously on that property were demolished. No additional significant changes have occurred to the surrounding area since the 1962 aerial photograph.

1970 Aerial Photograph (1" = 500')

The 1970 aerial photograph indicates an additional dirt patch has been constructed to the immediate west of the P-shaped dirt road. No other significant changes have occurred to the Site since the 1966 aerial photograph. No additional changes have occurred to the surrounding area since the 1966 aerial photograph.

1974 Aerial Photograph (1" = 500')

The 1974 aerial photograph indicates no significant changes have occurred to the Site since the 1970 aerial photograph. No significant changes have occurred to the surrounding properties since the 1970 aerial photograph.

1980 Aerial Photograph (1" = 500')

The 1980 aerial photograph indicates that the building on-Site has been demolished. No significant changes have occurred to the immediately adjacent properties to the north, east and west. The buildings directly south of the Site, on the south side of Barclay Street, have been demolished and the property is vacant. No additional changes have occurred to the surrounding area since the 1974 aerial photograph.

1985 Aerial Photograph (1" = 500')

The 1985 aerial photograph indicates that the Site has been asphalt paved. No additional changes have occurred to the Site. The adjacent properties have all replace dirt parking lots with asphalt paved parking lots. Directly south of the Site, across Barclay Street, has also been asphalt paved. To the southeast of the Site, along the railroad tracks, the buildings that were present in the 1980 aerial, have been demolished. No additional significant changes have occurred to the adjacent properties and the surrounding area since the 1980 aerial photograph.

1994 Aerial Photograph (1" = 500')

The 1994 aerial photograph indicates that the Site is being used as a parking lot. A property to the northwest, across West John Street, has expanded its building northward, with parking surrounding it. No other significant changes have occurred to the Site or the surrounding areas since the 1985 aerial photograph.

2006 Aerial Photograph (1" = 500')

The 2006 aerial photograph indicates no significant changes have occurred to the Site since the 1994 aerial photograph. The property to the northwest, across West John Street, has expanded its building northward again into what appears to be a strip mall. Just west of the strip mall, another building was constructed on formerly vacant land. North of the Site, the buildings were demolished and a parking lot constructed. A large building was constructed adjacent to the east of the Site. No additional significant changes have occurred to the surrounding area since the 1994 aerial photograph.

2009 Aerial Photograph (1" = 500')

The 2009 aerial photograph indicates no significant changes have occurred to the Site or surrounding area since the 2006 aerial photograph.

2011 Aerial Photograph (1" = 500')

The 2011 aerial photograph indicates no significant changes have occurred to the Site or surrounding area since the 2009 aerial photograph.

4.3.3 Historical Topographic Maps

An inquiry was made with EDR to obtain historical USGS topographic maps for the Site. Historical topographic maps were reviewed for the following quadrants and years: Oyster Bay, New York, 1897, 1989 and 1899/1900, Hicksville, New York 1947, 1954/1955, 1967/1969, 1979 and 2014. No significant changes in elevation were noted. Copies of the historical topographic maps can be found in Appendix F.

1897 Oyster Bay Quadrant Topographic Map (1:62,500)

Based on a review of the 1888 Oyster Bay quadrant topographic map, the use of the Site is unidentifiable. Roads are developed surrounding the Site. The Long Island Railroad has also been developed to the south of the Site. The land immediately surrounding the Site appears to be undeveloped with no noted changes in elevation.

1898 Oyster Bay Quadrant Topographic Map (1:62,500)

Based on a review of 1898 Oyster Bay quadrant topographic map, no significant changes in development or elevation have occurred to the Site or the surrounding area since the 1897 topographic map.

1899/1900 Oyster Bay Quadrant Topographic Map (1:62,400)

Based on a review of the 1899 Oyster Bay quadrant topographic map, no significant changes in development or elevation have occurred to the Site or the surrounding area since the 1898 Oyster Bay quadrant topographic map.

1947 Hicksville Quadrant Topographic Map (1:24,000)

Based on a review of the 1947 Hicksville quadrant topographic map, no significant changes in development or elevation appear to have occurred to the Site, although we know from the 1938 and 1947 aerial photographs that the Site has been in use and undergone some development. Directly to the south of the Site, buildings were developed to the north of the LIRR tracks. Additional roads including James Street, Maple Place, Wyckoff Street, and Sackett Street were developed to the north of the Site. The dashed lines are on this figure are the topographic lines from the 1899/1900 Topographic Map, and the solid lines are the current/new topographic lines.

1954/1955 Hicksville Quadrant Topographic Map (1:24,000)

The 1954 Hicksville quadrant topographic map indicates that the Site is within an urbanized area, although no structures are illustrated on-Site. The area immediately surrounding the Site are also within the urbanized area; however, structures are no longer depicted. No other significant changes in development or elevation have occurred to the Site and surrounding area since the 1947 Hicksville quadrant topographic map.

1967/1969 Hicksville Quadrant Topographic Map (1:24,000)

Based on a review of the 1967/1969 Hicksville quadrant topographic map, the U-shaped building, first identified in the 1947 aerial photograph, is depicted on-Site. No other significant changes in development or elevation have occurred to the Site since the 1954 Hicksville quadrant topographic map. Buildings have been constructed to the adjacent properties to the south, east, and west of the Site. Cantiague Park was constructed to the northwest direction of the Site. Additional surface water bodies have been identified to in all directions from the Site. No other significant changes in development or elevation have occurred to the Site and surrounding area since the 1954/1955 Hicksville quadrant topographic map.

1979 Hicksville Quadrant Topographic Map (1:24,000)

Based on a review of the 1979 Hicksville quadrant topographic map, no significant changes in development or elevation have occurred to the Site since the 1967/1969 Hicksville quadrant topographic map. Several buildings are identified west of the Site. Several disturbed areas are noted to the southwest of the Site. No other significant changes in development or elevation have occurred to the Site and surrounding area since the 1967 Hicksville quadrant topographic map.

2013 Hicksville Quadrant Topographic Map (1:24,000)

Based on a review of the 2013 Hicksville quadrant topographic map, no significant changes in development or elevation are illustrated within the Site or surrounding area since the 1979 Hicksville quadrant topographic map, although buildings are not depicted on this topographic map.

4.3.4 City Directory

City directories serve as a historical resource by listing the name of a resident or the name and type of a business at a particular address. A search was made by EDR for historical city directories of the Site and immediately adjacent properties. As a result of the search, the city directories were reviewed for the years 1973, 1978, 1983, 1988, 1992, 1995, 1999, 2003, 2008 and 2013. The reviewed city directory was Cole Information Services. A copy of the City Directory Abstract Report is included in Appendix G.

A specific address was not provided for this Site location. Therefore, a public database was used to determine an address. The potential addresses for this Site are 71-91 West (W) John Street (North side of the parking lot) and 110-132 Barclays Street (south side of the parking lot). Based on a review of the City Directory Abstract, the Site was not identified.

Based on the proximity to the Site, adjacent streets that were further researched in the city directory include neighboring properties located along W. John Street. The properties are identified as commercial and residential as described below:

Occupant	Year(s) Listed
65 W John Street

4.4 Tier 1 Vapor Encroachment Screening

Matrix conducted a VES in general accordance with the ASTM Designation E2600-15 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*.

The objective of the VES is to conduct an initial screening to determine whether current or historical practices associated with the Site or nearby properties have the potential to have created a Vapor Encroachment Condition (VEC). The term VEC is defined by ASTM Standard 2600-15 "as the presence or likely presence of chemicals of concern (COC) vapors in the subsurface of the Site caused by the release of vapors from contaminated soil and/or groundwater on or near the Site as identified by Tier 1 or Tier 2 procedures."

The Tier 1 screening process includes the following: (1) a search distance test to determine if there are known or suspect contaminated properties in the AOC; and (2) a COC test to determine for those known or suspect contaminated properties within the AOC whether or not a COC is likely to be present.

Matrix reviewed standard environmental record sources typically collected as part of the ASTM E1527-13 Phase I to determine if there are known or suspected sources of contamination within the AOC. The AOC is determined utilizing the approximate minimum search distances as defined by ASTM E2600-15. The approximate minimum search distance is based upon the type of COC; petroleum hydrocarbons or non-petroleum hydrocarbons. Generally, the approximate minimum search distance with regards to the AOC is one-third mile for non-petroleum hydrocarbons and one-tenth mile for petroleum hydrocarbons.

There are four possible conclusions of the Tier 1 screening process which include: (1) a VEC exists; (2) a VEC likely exists; (3) a VEC cannot be ruled out; or (4) a VEC can be ruled out because a VEC does not or is not likely to exist. If a VEC does not exist or is unlikely to exist, then the VES process is considered complete in accordance with ASTM E2600-15. If a VEC cannot be ruled out in the Tier 1 screen, then further action may be recommended (i.e., Tier 2). A Tier 2 screening is excluded from the scope of the Tier 1 process.

4.4.1 Standard Environmental Record Sources

A VES was completed for the Site and surrounding area through a search by EDR dated March 9, 2017. The VES utilizes standard environmental record sources to determine if there are known or suspected sources of contamination within the AOC. The search was conducted in general accordance with ASTM E 2600-130 standards.

Based on the findings of the VES Worksheet, a VEC was ruled out. A copy of the Vapor Encroachment Screen is included in Appendix H.

4.5 USER PROVIDED INFORMATION

4.5.1 Title Records

Chain-of-Title records were not provided for review by Matrix. Based on information obtained from http://lrv.nassaucounty.gov West John Street (Section 11; Block 184, Lot 15) is owned by Town of Oyster Bay. No other chain-of-title records were made available by the User.

4.5.2 Environmental Liens or Activity and Use Limitations

No records regarding environmental liens or activity and use limitations were provided by the User for Matrix to review.

4.5.3 Specialized Knowledge

Specialized knowledge of RECs or potential RECs in connection with the Site has been included in Section 5.0.

4.5.4 Commonly Known or Reasonably Ascertainable Information

Commonly known or reasonably ascertainable information has been provided in Section 10.0.

4.5.5 Valuation Reduction for Environmental Issues

No information regarding the valuation reduction for environmental issues was provided by the owner.

4.5.6 Owner, Property Manager, and Occupant Information

The Site is currently owned by Town of Oyster Bay, based on information provided the Site consists of an asphalt paved parking lot that is used for municipal parking.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

A reconnaissance of the Site and surrounding area was performed on March 16, 2017, by Jordan Farber of Matrix. No Site personnel were present during the site reconnaissance. All exterior areas of the property were inspected during the Site reconnaissance. There are no interior structures on-Site. During the site reconnaissance, cars were parked in almost all parking spaces within the Site and neighboring properties had snow cover and snow banks; therefore, these are noted as limitations. Photographs of significant features identified during the Site reconnaissance are included in Appendix B.

5.2 General Site Setting

The Site is located at West John Street, occupies Section 11, Block 184, Lot 15 in Hicksville, Town of Oyster Bay, Nassau County, New York. The Site consists of one parcel which is improved asphalt-paved parking lot.

5.3 Exterior Observations

5.3.1 Hazardous Substances/Wastes

No evidence of hazardous substances/wastes and petroleum products was observed during the Site reconnaissance.

5.3.2 Bulk Storage Tanks and Appurtenances

Aboveground Tanks and Associated Piping

No evidence of hazardous substances/wastes was observed during the Site reconnaissance.

Underground Tanks and Associated Piping

No evidence of USTs and associated piping was observed on exterior portions of the Site during the Site reconnaissance.

Storage Pads and Areas Including Drum/Waste Storage

No evidence of storage pads and areas including drum/waste storage was observed on exterior portions of the Site during the Site reconnaissance.

Rail, Truck, or Other Loading and Unloading Areas

No evidence of rail, truck, or other loading and unloading areas was observed on exterior portions of the Site during the Site reconnaissance.

Pump Stations, Sumps, and Pits

No pump stations, sumps, or pits were observed on exterior portions of the Site during the Site reconnaissance.

Surface Lagoons and Impoundments

No surface lagoons or impoundments were observed on exterior portions of the Site during the Site reconnaissance.

5.3.3 Drainage Systems and Areas

Surface Water Bodies

No surface water bodies were observed on exterior portions of the Site during the Site reconnaissance.

Sanitary/Storm Sewer Collection Systems

A storm sewer collection system was observed on Site during the Site reconnaissance. No evidence of staining or a release was identified in the vicinity of the storm water collection sewer grates. Several storm water collection sewer grates were observed throughout the street surrounding the Site.

Septic Systems and Leach Fields

No septic systems or leach fields were observed on exterior portions of the Site during the Site reconnaissance.

Seepage Pits and Dry Wells

No seepage pits or dry wells were observed on exterior portions of the Site during the Site reconnaissance.

Storm Water Detention Ponds and Fire Water Ponds

No storm water detention pond and fire water pong were observed on exterior portions of the Site during the Site reconnaissance.

Drainage Swales and Culverts

A storm water drain system was observed in the southern portion of the Site during the Site. No evidence of staining or a release was identified in the vicinity of the storm water collection sewer grates. No drainage swales or culverts were observed on exterior portions of the Site during the Site reconnaissance.

5.3.4 Discharge and Disposal Areas

Solid Waste Generation/Disposal and Dumpsters

No evidence of solid waste generation/disposal and dumpsters was observed during the Site reconnaissance.

Sanitary/Process Waste Generation/Discharge Points

No evidence of sanitary/process waste generation or discharge points was observed on exterior portions of the Site during the Site reconnaissance

Underground Piping, Including Industrial Process Sewers

No evidence of underground piping, including industrial process sewers was observed on exterior portions of the Site during the Site reconnaissance.

Waste Piles

No evidence of waste piles was observed on exterior portions of the Site during the Site reconnaissance.

Landfills or Landfarms

Based on a review of the State's Solid Waste Facility Directory and the Site reconnaissance, no landfills or landfarms are located in close proximity to the Site.

Open Pipe Discharges

No open pipe discharges were observed on exterior portions of the Site during the Site reconnaissance.

5.3.5 Transformers

Based on the Site Reconnaissance, one pole-mounted transformer was identified on West John Street. The transformer did not appear to have any indication whether they contain PCBs. In the case of a leak, explosion, etc. the components within the transformers could have potential impact on the Site.

Matrix contacted LIPA, the owner of the transformers, regarding the contents of the transformers and received the following response:

"No analytical data is available for these transformers. However, all distribution transformers owned by LIPA were specified at the time of purchase from the manufacturer to contain a dielectric fluid consisting of mineral oil, not PCBs. As a result, LIPA's in-service transformers typically are expected to either contain no detectable PCBs or low levels of PCBs (typically <0.01%). Even though mineral oil was specified, low levels of PCBs could nonetheless be present because manufacturers sometimes manufactured mineral oil transformers in close proximity to transformers manufactured to specifically contain PCBs. LIPA does not routinely conduct sampling and analysis of transformers for PCBs as that would require the incurrence of an outage and costs that would have to be passed on to the customer. Instead, units are tested when they retired from active service."

5.4 Interior Observations

As stated above, there were no interior structures located on site.

6.0 INTERVIEWS

6.1 Interview with Owner

No facility or additional personnel were present on the Site during the Site reconnaissance. A user questionnaire was provided to LIRR and information provided has been included throughout this report. A copy of the completed Prospective Landowner and/or User Questionnaire will be included in Appendix I.

6.2 Interview with Site Manager

No personnel were present during the Site reconnaissance; therefore, no interview was conducted with the Site Manager.

6.3 Interview with Occupants

The Site does not consist of any occupants,

6.4 Interview with Local Government Officials

As indicated above (Section 5.2), Matrix contacted the USEPA, NYSDEC, Nassau County Clerk, Nassau County Fire Department and the Oyster Bay Township Municipal Clerk regarding environmental files for the Site. Information request letters and responses associated with these agencies are included in Appendix C.

6.5 Interview with Others

A Prospective Landowner and/or User Questionnaire was provided to LIRR for completion. Responses provided on the Prospective Landowner and/or User Questionnaire have been included throughout this report. A copy of the Prospective Landowner and/or User Questionnaire has not been received yet. When Matrix receives it, the document will be provided in Appendix I.

7.0 FINDINGS & OPINIONS

Based on the site reconnaissance, database review, historical review, review of available records, and interviews with persons familiar with the Site and surrounding area, Matrix is providing findings and opinions including RECs, historical recognized environmental conditions (HRECs), *deminimis* conditions, and data gaps.

Recognized Environmental Conditions

During the site reconnaissance, two RECs were identified on the Site:

- Former industrial use of the property for truck and machinery storage from sometime prior to 1947 to at least 1974. This usage potentially entailed the storage and usage of petroleum products and solvents for maintenance activities, which may have impacted the subsurface.
- Long history of industrial usage on the western adjacent property. The property adjacent to the west of the Site, currently a Hertz car rental facility, was formerly known as Long Island UK Auto and Saturn of Hicksville, located at 125 W John Street and listed on numerous databases, including CESQG, MANIFEST, AST, ECHO, FINDS AND UST and on the NY HIST AUTO database as Long Island UK Auto, which was open in 2008. In 1968, this property was depicted as a tractor repair facility on the Sanborn map. Spills on this property as a result of historic industrial usage could potentially impact the Site, due to its proximity.

Controlled RECs

No CRECs have been identified for the Site.

Historical RECs

No HRECs have been identified for the Site.

De Minimis Conditions

No *de minimis* conditions were observed or identified through interviews or records review of current or historical uses of the Site and adjoining properties.

Other Findings

The term “other finding” is not defined by ASTM; rather, Matrix uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard. Although not a considered REC based on currently available information, Matrix identified the following other findings based on review of the database reports. Sites within

0.1 miles of the Site and at a higher elevation that were determined to have the potential to impact the Site should a spill have occurred were deemed other findings.

- The property adjoining the Site to the east (presumed upgradient and at a higher elevation) currently is a storage facility. Formerly, the property was Gilson Residence/Gilson Knitwear located at 65 West John Street. This facility was found on the NY SPILL database (one closed spill remediated to the satisfaction of NYSDEC in 2001). Spills on this property could potentially impact the Site, due to its proximity.

Data Gaps

- To date, responses to most FOIL requests submitted have not been received. All responses will be forwarded upon receipt with recommendations, if necessary.
- No exact address was provided by the client and so Matrix used publicly available mapping services to determine potential addresses. The potential addresses for this Site are 71-91 West John Street.
- The entirety of the Site was inspected during Matrix's walkthrough, though most of the Site was covered by parked cars, limiting a complete inspection. Furthermore, neighboring properties had snow cover and snow banks, which limited visual observations of the surrounding area.
- A limitation was encountered in determining the historical use of the subject property. The earliest source of historical information reasonably ascertainable within the time frame of this report in which usage could be determined was an aerial photograph from 1938. At the time of the photograph, a portion of the Site appeared to be agricultural field crop land (a developed use per the ASTM Standard). Therefore, the ASTM E1527 requirement to determine all obvious uses of the property from the present back to the property's first obvious developed use, or back to 1940, whichever is earlier, could not be achieved. However, based upon the identified agricultural land use, it is unlikely that there had been significant prior development; therefore, this data failure is not expected to impact the results of this assessment.

8.0 DEVIATIONS

The Phase I ESA was performed in accordance with the ASTM 1527-13 Standards as well as the detailed scope of services presented in Section 2.2 of this report.

9.0 ADDITIONAL SERVICES

No additional services were performed beyond the detailed scope presented in Section 2.2 of this report.

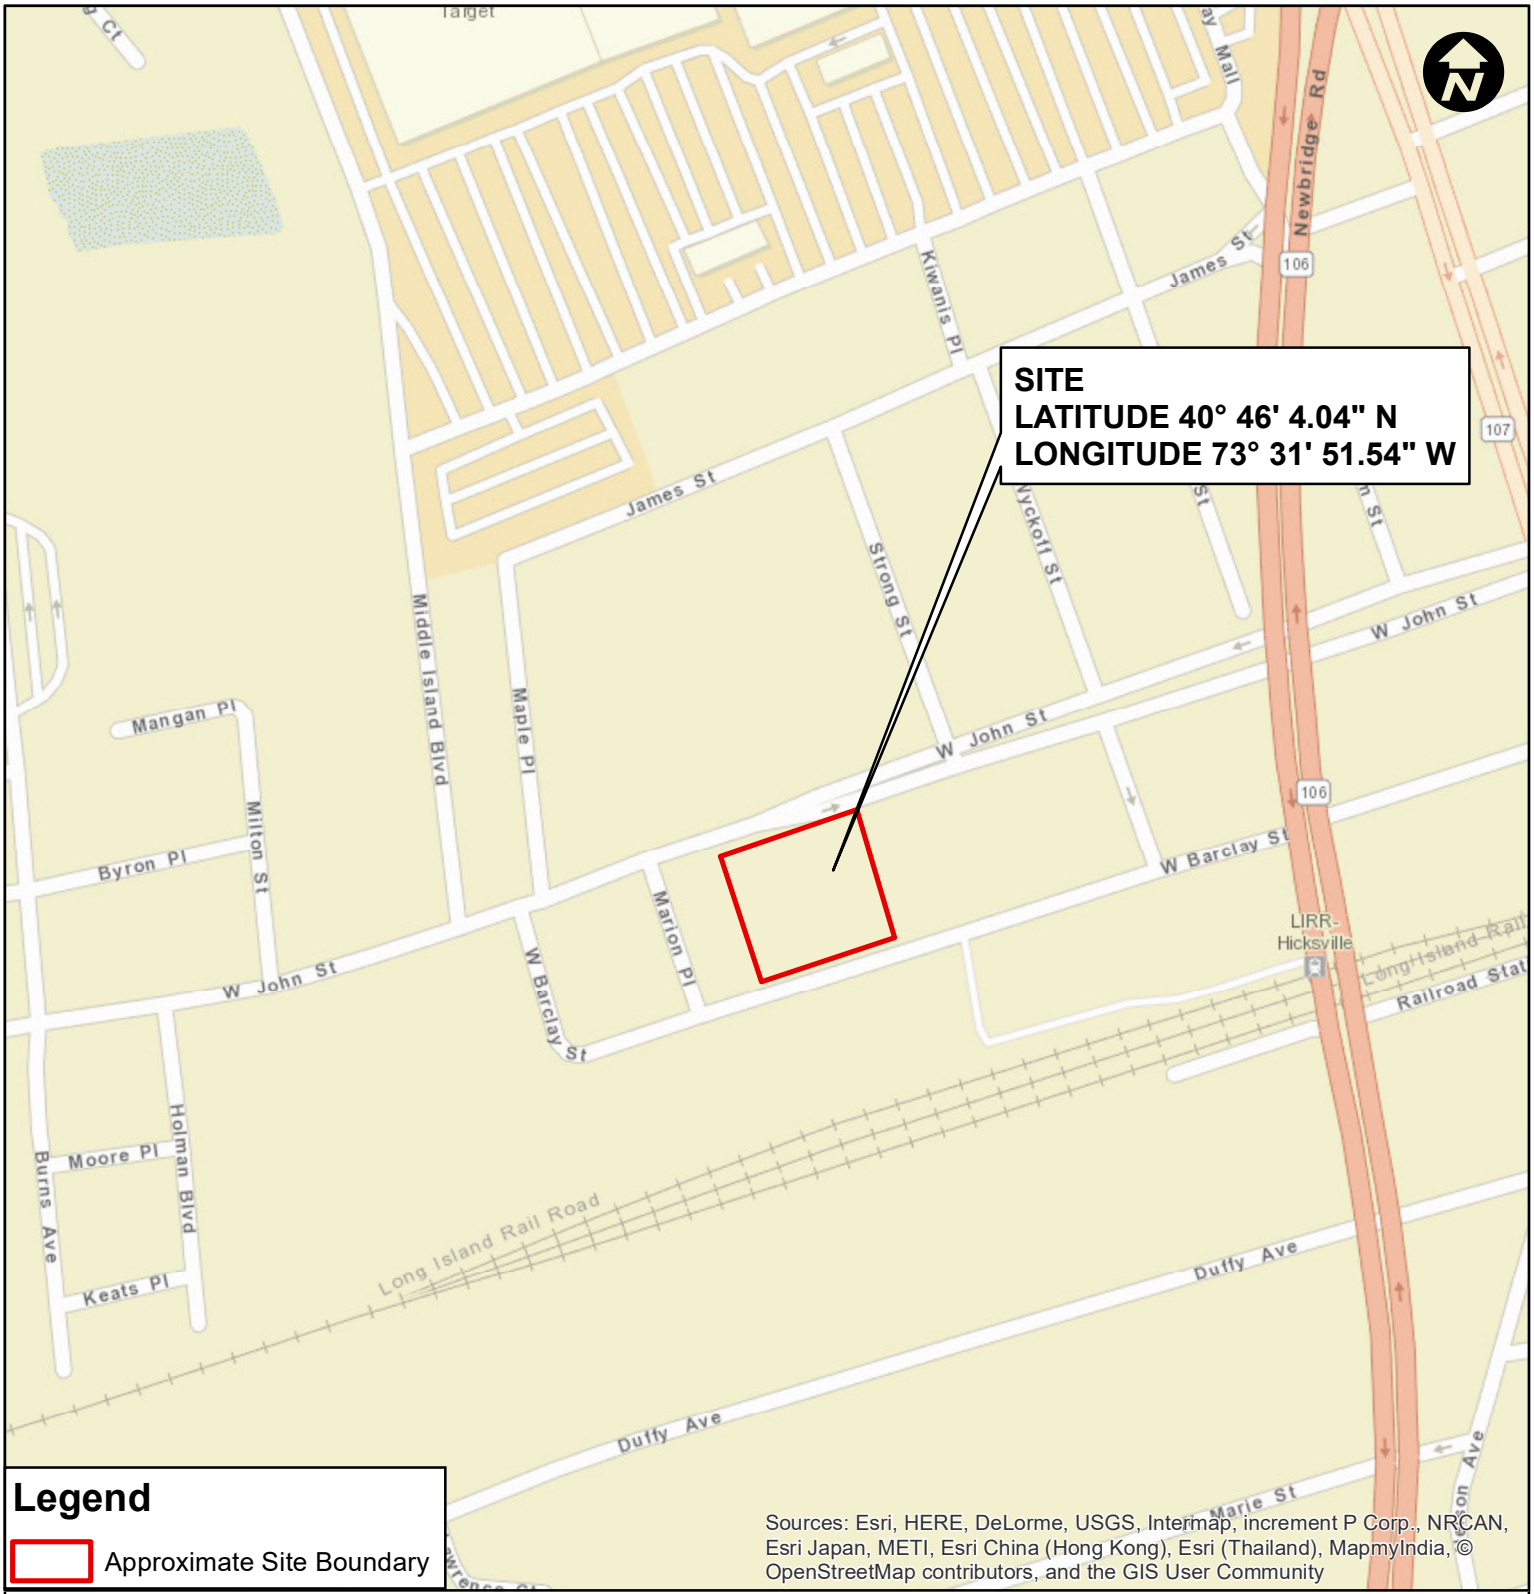
11.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Matrix declares, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and preformed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Samantha Adler
Environmental Scientist

Brian Crespi
Project Manager

Mindy Chassin Horowitz
Program Director



12.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

SAMANTHA ADLER
Environmental Scientist
Ms. Adler has over three years of experience in environmental investigations including environmental oversight, environmental assessment, and remediation projects under NJDEP and NYSDEC jurisdiction for commercial/industrial facilities. Ms. Adler's experience includes but is not limited to, oversight of temporary and monitoring well installations, soil borings and soil classification, groundwater, surface water, soil gas, and sediment sampling, processing of sample laboratory analysis, and environmental technical reports relative to Preliminary and Phase I Environmental Site Assessments and investigations. She has experience in the preparation of various environmental technical reports relating to the various environmental investigations in New Jersey and New York.

BRIAN CRESPI
Project Manager
Mr. Crespi has over eight years of experience in the environmental consulting field performing initial and remedial site assessments, hazardous materials assessments, construction oversight, health and safety monitoring, remedial design, and landfill gas evaluations. Mr. Crespi's areas of expertise include brownfield cleanup and redevelopment; investigation and remediation of sites with potential hazardous material contamination; litigation support for cost recovery and insurance matters; development of remedial cost estimates; and vapor intrusion assessments and remediation. Mr. Crespi has extensive experience conducting investigations for clients in both the public and private sectors, including projects focusing on railroads, landfills, industrial and commercial facilities, as well as impacts on neighboring or proposed residential development. Mr. Crespi has developed and directed the implementation of numerous soil, groundwater and vapor intrusion sampling programs for remedial investigations at industrial facilities being evaluated under the New York Spill Response Program and SRRA and ISRA in New Jersey. His environmental science and engineering background, along with varied experience in New York and New Jersey, provide the foundation to develop and implement investigation and remediation plans and develop the findings into reports for various state and federal regulatory programs. Mr. Crespi is certified through the NYC Mayor's Office of Environmental Remediation, as an OER Certified Brownfield Professional, to efficiently achieve brownfield cleanup and redevelopment on New York City Brownfield sites.

MINDY CHASSIN HOROWITZ
Project Director
Ms. Horowitz has over 20 years of experience in the environmental consulting field performing hazardous materials assessments, waterfront permitting, construction oversight and remedial design. Ms. Horowitz's areas of expertise include brownfield cleanup and redevelopment; investigation and remediation of New York City e-designation sites (sites with a zoning map amendment) with potential hazardous material contamination; stormwater pollution prevention; environmental due diligence of industrial, commercial, residential and mixed-use facilities; litigation support for cost recovery and insurance matters; and development of remedial cost estimates. She has extensive experience managing and conducting hydrogeologic investigations for clients in both the public and private sectors, including projects focusing on rail roads, highways, airports and industrial and commercial facilities. Ms. Horowitz has developed and directed the implementation of numerous soil, groundwater and sediment sampling programs for remedial investigations at industrial facilities being evaluated under ISRA. Her combined hydrogeological and geo-environmental engineering background, along with her varied experience in New York and New Jersey, enable her to compile and interpret analytical data to develop clear and technically defensible conceptual site models and incorporate these findings into reports for various state and federal regulatory programs. Mindy is certified through the NYC Mayor's Office of Environmental Remediation, as an OER Certified Brownfield Professional, to efficiently achieve brownfield cleanup and redevelopment on New York City Brownfield sites.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal Delisted NPL site list

Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

A review of the Delisted NPL list, as provided by EDR, and dated 12/05/2016 has revealed that there is 1 Delisted NPL site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
ANCHOR CHEMICALS	***500 WEST JOHN STREET***	***W 1/2 - 1 (0.797 mi.)***	***L57***	***217***

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/12/2016 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
110 DUFFY LLC	***110 DUFFY AVE***	***ESE 1/8 - 1/4 (0.244 mi.)***	***J32***	***99***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
AAAA-1 AUTO BODY	***112 DUFFY AVE***	***S 1/8 - 1/4 (0.159 mi.)***	***E17***	***50***

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/14/2016 has revealed that there are 8 NY SHWS sites within approximately 1 mile of the target property.

Class Code: Significant threat to the public health or environment - action required.				

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 06/01/2016 has revealed that there are 4 NY VAPOR REOPENED sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/06/2017 has revealed that there are 21 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 7 NY UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 02/06/2017 has revealed that there are 4 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/12/2016 has revealed that

there are 9 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto

site within approximately 0.125 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Conditionally Exempt Small Quantity Generator

Date form received by agency: 07/08/1999
Site name: BVF AUTO BODY
Classification: Not a generator, verified

Date form received by agency: 06/25/1986
Site name: BVF AUTO BODY
Classification: Small Quantity Generator

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS

BVF AUTO BODY (Continued) **1000112600**

CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

FINDS:

Registry ID: 110006445203

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Record Added Date: 10/01/2004
Record Updated Date: 09/26/2016
Update By: WJPARISH
Site Description: Site Location: The site is located at 230 Duffy Avenue in Hicksville, Nassau County. Site Features: The site occupies approximately 6.76 acres of land. The main site feature include a 122,900 square foot one and two story building. The remainder of the site consists of an asphalt parking area with some limited area of grass cover. The Site is bounded on the north by the Long Island Railroad; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations. The Site building is presently used for warehouse/retail. Surrounding land uses include residential, commercial and industrial uses. Current Zoning/Use: The property, which is located in an urban/suburban area, is currently zoned for commercial/industrial use. Historic Use(s) and Source of Contamination: Philips Electronics North America Corporation (Philips) formerly owned the Site, which was operated by Amperex Electronics Corporation, a subsidiary of Philips. Amperex's primary business was the manufacture of electron tubes, consisting of receiving and transmitting tubes for high power RF and microwave applications. Manufacturing operations included the machining, heat treating, chemical cleaning, metal and glass working, cathode coating and metal plating processes. In the early 1990s, the plant was closed and all manufacturing and process equipment was removed from the Site.Site Geology/Hydrogeology: The soils in the area of the Site are classified by the US Department of Agriculture as consisting mostly of urban land soils, which contain a mix of sand, silt, clay and fill material. The depth to groundwater at the Site varies from approximately 55 to 65 feet below grade. The site-specific groundwater flow direction is to the south-southeast.
Env Problem: Nature and Extent of Contamination: Based on the environmental data collected during the RI and supplemental RI that was conducted at the site, the primary contaminants of concern at this site include volatile organic compounds (VOCs) and metals in soil and groundwater. Several VOCs were detected in site soils but below their respective NYSDEC Part 375 Restricted Industrial standards. Two metals, arsenic and mercury, were detected in site soils exceeding the Part 375 Restricted Industrial standards. Several VOCs were detected in site groundwater above the NYSDEC AWQSGVs. Detected compounds include:

230 DUFFY AVENUE (Continued) **S102135819**

tetrachloroethene (PCE) at 12 ug/L, cis-1,2-dichloroethene (cis-1,2-DCE) at 14 ug/L, trichloroethene (TCE)at 40 ug/L, 1,1-dichloroethane (1,1-DCA) at 59 ug/L, and 1,1,1-trichloroethane (1,1,1-TCA) at 3000 ug/L. The several metals were detected in site groundwater above the NYSDEC AWQSGV. Soil vapor intrusion into structures on-site is also a concern. Sub-slab and soil vapor samples collected revealed levels exceeding NYSDOH guidance values. 1,1,1 TCE values ranged from 117 ug/m3 to 7,310 ug/m3. Carbon tetrachloride was found at levels ranging from 21 ug/m3 to 1,990 ug/m3. PCE values ranged from 173 ug/m3 to 14,600 ug/m3. TCE values ranged from 6.4 ug/m3 to 355 ug/m3. Regarding sub-slab samples collected, 1,1,1 TCE was found in exceedance of the NYSDOH Sub-Slab guidance value in five of the six sub-slab samples collected, ranging from 446 ug/m3 to 16,600 ug/m3. PCE was found in exceedance in five of the six sub-slab samples, ranging from 479 ug/m3 to 1,530 ug/m3. TCE was found in exceedance in two of the six sub-slab vapor samples ranging from 59.7 ug/m3 to 63.4 ug/m3. Based on a comparison to the NYSDOH guidance document decision matrices, mitigation is warranted. Currently a Remedial Work Plan is being prepared.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes. The site is served by a public water supply that has a treatment system in place to remove contamination prior to distribution to the public. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for inhalation of site contaminants via soil vapor intrusion within the on-site building. Also, the potential exists for off-site migration of contaminated soil vapor toward downgradient residences.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was PARISH WELL 12/31/86: Long Island Lighting reported gasoline odors in

230 DUFFY AVENUE (Continued) **S102135819**

the building and in their utilities. 01/05/87: As per Nassau County Fire Marshal- odor was noted where utilities enter building. Amperex has a 275 gal gasoline tank for their generator, and a 3K gal alcohol tank. NY Telephone is next door (202 Duffy). NCFM to request tank tests; Nassau County Health to check air quality. 01/06/87: As per NCFM- found 2000ppm in pit in the building. NY Tel has 1 abandoned 4K and 1 abandoned 2K. 01/09/87 (A): DEC (Parish) met NCFM on site- Confirmed gasoline odor. Has sketch. 01/09/87 (B): POSSIBLE SOURCES- Amperex has 1 275 gal gasoline tank, 1 15K #4 oil tank, and the 3K alcohol tank. NY Tel (next door E) has some abandoned tanks and a 10K gasoline tank. Old farm across street to S has 550 gal gas. There are others further away. 01/16/87: Parish on site- requested access from Amperex for investigation. 01/30/87: Amperex denying access unless gasoline was found in significant amounts . 02/06/87: NCHD report of 6 and 14Jan- Some BTEX in utility pit, along with chlorinated solvents. 03/02/87: Parish on site with Tyree- performed soil gas survey along Duffy, and between Amperex and NY Tel, and took samples. Has sketch. 03/06/87: Map- shows old gasoline , fresh gasoline , and chlorinated hydrocarbons . 04/27/87: Parish and Tyree on site- Installed well on Duffy. 04/28/87 - 04/30/87: Tyree installed more wells along Duffy, between Amperex and NY Tel. 07/17/87: Parish letter to NY Tel- Request info on numbers and locations of past and present tanks; on-site investigation. Gives scenario for failure to comply. 08/04/87 (A): NY Tel to have soil borings performed next to the tanks. Will finish them as wells if necessary. 08/04/87 (B): MAP SHOWS 1 ABANDONED 550 GALLON DIESEL TANK, 1 ABANDONED 550 GALLON GASOLINE TANK, 1 ABANDONED 2K GASOLINE TANK, 1 ABANDONED 4K GASOLINE TANK, 1 550 GAL WASTE OIL TANK, 1 3K FUEL OIL TANK, AND 1 10K GASOLINE TANK. 08/11/87: DEC (Acampora) on site- Borings performed at NY Tel near abandoned gas and diesel tanks. Soil ok. 10/20/87: Pedneault sampled- Low levels of BTEX, along with tetrachlorethane. 02/10/88: DEC (Mirza) checked U-tubes of the 10K tank on N side of NY Tel- FOUND 8 PRODUCT IN THE WEST TUBE. THIS OCCURRED ONLY ONCE. 02/16/88: Mirza checked wells- no floating product. 03/21/88: Tyree installed wells around tank at rear of NY Tel. 07/06/88: Pedneault to sample for BTEX. 07/18/89: Letter to Tyree- cease monitoring of wells (no floating product ever found?). 01/17/89: Parish on site with Amperex and consultant- SITE BEING SOLD. Consultant to sample. 05/03/91: Tyree letter- No floating product from 7Apr88 to 9Mar90. Request closure. 05/21/91: Letter to Tyree- sample for dissolved product. 07/31/91: Tyree letter- sampled 26Jun. FOUND 2060PPB MTBE AND 343PPB BTEX IN WELL 1 ; TRACE MTBE AND 55PPB BTEX IN WELL 2 . 03/10/97: Letter to 230 DUFFY REALTY CORP - There is no identified responsible party or groundwater impact based on our investigation . The spill will be closed. ***NOTE: SEE ALSO 8704418 (210 DUFFY-AMPEREX)- 15K #2 OIL TANK FAILED TIGHTNESS TEST. PASSED RETEST 6SEPT87. CLOSED 23SEPT87. FILE MISSING. ***NOTE: SEE ALSO 9005890 (230 DUFFY- AMPEREX)- CONTAMINATION FOUND DURING ROUTINE REMOVAL OF 1 15K #6 OIL TANK. APPROX 70-80CY SOIL REMOVED. BORINGS AND SAMPLING IN 1997 FOUND ONLY TRACE CONTAMINATION. CLOSED 7APR97. SEE IT FOR FULL HISTORY. ***NOTE: SEE ALSO 9204967 (NY TELEPHONE- 202 DUFFY)- CRACK IN 10K GAS TANK. TANK HAD LINER? TANK REPAIRED? ACTIVE. ***NOTE: SEE ALSO 9707470 (NYNEX- 202 DUFFY)- CONTAMINATION FOUND DURING REMOVAL OF 10K GAS. APPROX 70-80 TONS SOIL REMOVED. CLOSED 16OCT97."

Remarks: "GASOLINE ODOR IN BUILDING ***SEE ALSO 8704418 AND 9005890???***"

Site Code:	331484
Site Description:	Site Location: The site is located at 230 Duffy Avenue in Hicksville, Nassau County. Site Features: The site occupies approximately 6.76 acres of land. The main site feature include a 122,900 square foot one and two story building. The remainder of the site consists of an asphalt parking area with some limited area of grass cover. The Site is bounded on the north by the Long Island Railroad; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations. The Site building is presently used for warehouse/retail. Surrounding land uses include residential, commercial and industrial uses. Current Zoning/Use: The property, which is located in an urban/suburban area, is currently zoned for commercial/industrial use. Historic Use(s) and Source of Contamination: Philips Electronics North America Corporation (Philips) formerly owned the Site, which was operated by Amperex Electronics Corporation, a subsidiary of Philips. Amperex's primary business was the manufacture of electron tubes, consisting of receiving and transmitting tubes for high power RF and microwave applications. Manufacturing operations included the machining, heat treating, chemical cleaning, metal and glass working, cathode coating and metal plating processes. In the early 1990s, the plant was closed and all manufacturing and process equipment was removed from the Site.Site Geology/Hydrogeology: The soils in the area of the Site are classified by the US Department of Agriculture as consisting mostly of urban land soils, which contain a mix of sand, silt, clay and fill material. The depth to groundwater at the Site varies from

AMPEREX ELECTRONIC CO (Continued) **1000214757**

approximately 55 to 65 feet below grade. The site-specific groundwater flow direction is to the south-southeast.

Env Problem: Nature and Extent of Contamination: Based on the environmental data collected during the RI and supplemental RI that was conducted at the site, the primary contaminants of concern at this site include volatile organic compounds (VOCs) and metals in soil and groundwater. Several VOCs were detected in site soils but below their respective NYSDEC Part 375 Restricted Industrial standards. Two metals, arsenic and mercury, were detected in site soils exceeding the Part 375 Restricted Industrial standards. Several VOCs were detected in site groundwater above the NYSDEC AWQSGVs. Detected compounds include: tetrachloroethene (PCE) at 12 ug/L, cis-1,2-dichloroethene (cis-1,2-DCE) at 14 ug/L, trichloroethene (TCE)at 40 ug/L, 1,1-dichloroethane (1,1-DCA) at 59 ug/L, and 1,1,1-trichloroethane (1,1,1-TCA) at 3000 ug/L. The several metals were detected in site groundwater above the NYSDEC AWQSGV. Soil vapor intrusion into structures on-site is also a concern. Sub-slab and soil vapor samples collected revealed levels exceeding NYSDOH guidance values. 1,1,1 TCE values ranged from 117 ug/m3 to 7,310 ug/m3. Carbon tetrachloride was found at levels ranging from 21 ug/m3 to 1,990 ug/m3. PCE values ranged from 173 ug/m3 to 14,600 ug/m3. TCE values ranged from 6.4 ug/m3 to 355 ug/m3. Regarding sub-slab samples collected, 1,1,1 TCE was found in exceedance of the NYSDOH Sub-Slab guidance value in five of the six sub-slab samples collected, ranging from 446 ug/m3 to 16,600 ug/m3. PCE was found in exceedance in five of the six sub-slab samples, ranging from 479 ug/m3 to 1,530 ug/m3. TCE was found in exceedance in two of the six sub-slab vapor samples ranging from 59.7 ug/m3 to 63.4 ug/m3. Based on a comparison to the NYSDOH guidance document decision matrices, mitigation is warranted. Currently a Remedial Work Plan is being prepared.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes. The site is served by a public water supply that has a treatment system in place to remove contamination prior to distribution to the public. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for inhalation of site contaminants via soil vapor intrusion within the on-site building. Also, the potential exists for off-site migration of contaminated soil vapor toward downgradient residences.

AMPEREX ELECTRONIC CO (Continued) **1000214757**

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes. The site is served by a public water supply that has a treatment system in place to remove contamination prior to distribution to the public. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for inhalation of site contaminants via soil vapor intrusion within the on-site building. Also, the potential exists for off-site migration of contaminated soil vapor toward downgradient residences.

Site Code: 331484
Site Description: Site Location: The site is located at 230 Duffy Avenue in Hicksville, Nassau County. Site Features: The site occupies approximately 6.76 acres of land. The main site feature include a 122,900 square foot one and two story building. The remainder of the site consists of an asphalt parking area with some limited area of grass cover. The Site is bounded on the north by the Long Island Railroad; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations. The Site

AMPEREX ELECTRONIC CO (Continued) **1000214757**

building is presently used for warehouse/retail. Surrounding land uses include residential, commercial and industrial uses. Current Zoning/Use: The property, which is located in an urban/suburban area, is currently zoned for commercial/industrial use. Historic Use(s) and Source of Contamination: Philips Electronics North America Corporation (Philips) formerly owned the Site, which was operated by Amperex Electronics Corporation, a subsidiary of Philips. Amperex's primary business was the manufacture of electron tubes, consisting of receiving and transmitting tubes for high power RF and microwave applications. Manufacturing operations included the machining, heat treating, chemical cleaning, metal and glass working, cathode coating and metal plating processes. In the early 1990s, the plant was closed and all manufacturing and process equipment was removed from the Site.Site Geology/Hydrogeology: The soils in the area of the Site are classified by the US Department of Agriculture as consisting mostly of urban land soils, which contain a mix of sand, silt, clay and fill material. The depth to groundwater at the Site varies from approximately 55 to 65 feet below grade. The site-specific groundwater flow direction is to the south-southeast.

Env Problem: Nature and Extent of Contamination: Based on the environmental data collected during the RI and supplemental RI that was conducted at the site, the primary contaminants of concern at this site include volatile organic compounds (VOCs) and metals in soil and groundwater. Several VOCs were detected in site soils but below their respective NYSDEC Part 375 Restricted Industrial standards. Two metals, arsenic and mercury, were detected in site soils exceeding the Part 375 Restricted Industrial standards. Several VOCs were detected in site groundwater above the NYSDEC AWQSGVs. Detected compounds include: tetrachloroethene (PCE) at 12 ug/L, cis-1,2-dichloroethene (cis-1,2-DCE) at 14 ug/L, trichloroethene (TCE)at 40 ug/L, 1,1-dichloroethane (1,1-DCA) at 59 ug/L, and 1,1,1-trichloroethane (1,1,1-TCA) at 3000 ug/L. The several metals were detected in site groundwater above the NYSDEC AWQSGV. Soil vapor intrusion into structures on-site is also a concern. Sub-slab and soil vapor samples collected revealed levels exceeding NYSDOH guidance values. 1,1,1 TCE values ranged from 117 ug/m3 to 7,310 ug/m3. Carbon tetrachloride was found at levels ranging from 21 ug/m3 to 1,990 ug/m3. PCE values ranged from 173 ug/m3 to 14,600 ug/m3. TCE values ranged from 6.4 ug/m3 to 355 ug/m3. Regarding sub-slab samples collected, 1,1,1 TCE was found in exceedance of the NYSDOH Sub-Slab guidance value in five of the six sub-slab samples collected, ranging from 446 ug/m3 to 16,600 ug/m3. PCE was found in exceedance in five of the six sub-slab samples, ranging from 479 ug/m3 to 1,530 ug/m3. TCE was found in exceedance in two of the six sub-slab vapor samples ranging from 59.7 ug/m3 to 63.4 ug/m3. Based on a comparison to the NYSDOH guidance document decision matrices, mitigation is warranted. Currently a Remedial Work Plan is being prepared.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes. The site is served by a public water supply that has a treatment system in place to remove contamination prior to distribution to the public. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. Detected compounds include: tetrachloroethene (PCE) at 12 ug/L, cis-1,2-dichloroethene (cis-1,2-DCE) at 14 ug/L, trichloroethene (TCE)at 40 ug/L,

AMPEREX ELECTRONIC CO (Continued) **1000214757**

1,1-dichloroethane (1,1-DCA) at 59 ug/L, and 1,1,1-trichloroethane (1,1,1-TCA) at 3000 ug/L. The several metals were detected in site groundwater above the NYSDEC AWQSGV. Soil vapor intrusion into structures on-site is also a concern. Sub-slab and soil vapor samples collected revealed levels exceeding NYSDOH guidance values. 1,1,1 TCE values ranged from 117 ug/m3 to 7,310 ug/m3. Carbon tetrachloride was found at levels ranging from 21 ug/m3 to 1,990 ug/m3. PCE values ranged from 173 ug/m3 to 14,600 ug/m3. TCE values ranged from 6.4 ug/m3 to 355 ug/m3. Regarding sub-slab samples collected, 1,1,1 TCE was found in exceedance of the NYSDOH Sub-Slab guidance value in five of the six sub-slab samples collected, ranging from 446 ug/m3 to 16,600 ug/m3. PCE was found in exceedance in five of the six sub-slab samples, ranging from 479 ug/m3 to 1,530 ug/m3. TCE was found in exceedance in two of the six sub-slab vapor samples ranging from 59.7 ug/m3 to 63.4 ug/m3. Based on a comparison to the NYSDOH guidance document decision matrices, mitigation is warranted. Currently a Remedial Work Plan is being prepared.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes. The site is served by a public water supply that has a treatment system in place to remove contamination prior to distribution to the public. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for inhalation of site contaminants via soil vapor intrusion within the on-site building. Also, the potential exists for off-site migration of contaminated soil vapor toward downgradient residences.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"02/04/13 1550 Hrs (A): Called Response and spoke to MATT GEIGER- THEY WERE CONTACTED BY HIRSCH FUEL. 02/04/13 1550 Hrs (B): Response has dispatched KEN WATSON (CLEAR VIEW ENVIRONMENTAL) to document the situation. DR 02/04/13 1605 Hrs (A): Wood called- she confirmed that the oil has been transferred to drums. Hirsch will set up a temporary tank and reuse that oil. 02/04/13 1605 Hrs (B): The tank was on a concrete slab, but the oil impacted both the slab and surrounding soil. She confirmed it is believed approximately 25gal of oil leaked. 02/04/13 1605 Hrs (C): The owner has already contacted her insurance, who said she has no coverage BUT WOOD SUGGESTED THE OWNER SPEAK TO HER INSURANCE AGAIN. 02/04/13 1605 Hrs (D): WOOD SAID THE OWNER IS ELDERLY, DISABLED, AND ON SOCIAL SECURITY, AND HAS LIMITED FUNDS. DEC informed Wood that it is allowable for the owner to have a relative or friend EXCAVATE the contaminated soil. DR Clenup completed by the homeowner. All materials have been removed and properly disposed of. No further action. OK for closure."
Remarks:	"Outside tank leaked into slab and soil. FD called and pumped oil into drums. Replacement being scheduled. Cleanup is pending."

Site Description: Location:The ALSY site is located in an urban/suburban portion of Nassau County. The site is located approximately 4000 feet east of the Wantaugh State Parkway at 270/280 Duffy Avenue in Hicksville. The

ALSY MANUFACTURING, INC. (Continued) **S104541551**

Site occupies approximately 4 acres of land. Site Features:The main Site features include several large one-story buildings surrounded by asphalt parking areas. The Site is bounded on the north by the Long Island Railroad and a construction and demolition (C&D) debris reclaimer; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations.Current Zoning/Use(s):The Site buildings are presently used for commercial business. Surrounding land uses include residential, commercial and industrial uses.Historical Use(s): Prior to 1975, Metalab, a laboratory furniture manufacturer, conducted operations at the Site. ALSY Manufacturing manufactured electric lamps and lampshades at this facility from 1975 through 1991. ALSYs manufacturing processes included bronze plating, electroplating, and antiquing. Waste material that was generated included metals plating waste, wastewater treatment sludge, paint thinner, acidic paint stripper, alkaline paint stripper, and 1,1,1-trichloroethane. A remedial investigation was completed in several phases between 1995 and 2003. A Record of Decision (ROD) was issued March 2005. The ROD required a soil vapor intrusion assessment, rerouting the drainage of the parking lot, excavation/disposal of contaminated dry well sediments and installing monitoring wells between the site and a public water supply well. The Remedial Design was completed June 2009. The Remedial Construction to implement the remedy began January 2010. The contract cost was $1.312 Million. Construction was completed in April 2010. The Project is in Site Management. Due to remaining contamination, an Environmental Notice was filed on the property on May 29, 2013. Groundwater monitoring is performed periodically.Site Geology and Hydrogeology:The site is underlain by glacially derived sand and gravel deposits. Groundwater is found approximately 50 feet below ground surface, and flow is in a southerly direction.

Env Problem: The primary contaminants of concern at the Site were associated with historic metal plating operations. Contaminants that exceeded clean-up guideline concentrations included arsenic, chromium, copper, nickel and zinc in the soil and nickel in the groundwater. Chlorinated solvents were also found in soil vapor on-site, triggering mitigation of overlying structures. A SSDS system has been installed by the current owner of the overlying structures.The remedial action for the site involved excavation and off-site disposal of contaminated soils and sludge/waste from drywells at the site. These source removal actions are expected to prevent further releases to groundwater and reduce nickel concentrations south of the site (dissolved nickel has exceeded the groundwater standard). A monitoring program is being implemented to ensure that these actions remain protective of active public water supply wells are located generally downgradient of the site.

Health Problem: Access to the site is unrestricted and a majority of the site is covered by buildings and pavement. However, contact with contaminated soil or groundwater is unlikely unless they dig below the surface materials. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Subslab

ALSY MANUFACTURING, INC. (Continued) **S104541551**

depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in both of the on-site buildings to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Description: Location:The ALSY site is located in an urban/suburban portion of Nassau County. The site is located approximately 4000 feet east of the Wantaugh State Parkway at 270/280 Duffy Avenue in Hicksville. The Site occupies approximately 4 acres of land. Site Features:The main Site features include several large one-story buildings surrounded by asphalt parking areas. The Site is bounded on the north by the Long Island Railroad and a construction and demolition (C&D) debris reclaimer; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations.Current Zoning/Use(s):The Site buildings are presently used for commercial business. Surrounding land uses include residential, commercial and industrial uses.Historical Use(s): Prior to 1975, Metalab, a laboratory furniture manufacturer, conducted operations at the Site. ALSY Manufacturing manufactured electric lamps and lampshades at this facility from 1975 through 1991. ALSYs manufacturing processes included bronze plating, electroplating, and antiquing. Waste material that was generated included metals plating waste, wastewater treatment sludge, paint thinner, acidic paint stripper, alkaline paint stripper, and 1,1,1-trichloroethane. A remedial investigation was completed in several phases between 1995 and 2003. A Record of Decision (ROD) was issued March 2005. The ROD required a soil vapor intrusion assessment, rerouting the drainage of the parking lot, excavation/disposal of contaminated dry well sediments and installing

Site Description: Location:The ALSY site is located in an urban/suburban portion of Nassau County. The site is located approximately 4000 feet east of the Wantaugh State Parkway at 270/280 Duffy Avenue in Hicksville. The Site occupies approximately 4 acres of land. Site Features:The main Site features include several large one-story buildings surrounded by asphalt parking areas. The Site is bounded on the north by the Long Island Railroad and a construction and demolition (C&D) debris reclaimer; on the south by Duffy Avenue and a residential

ALSY MANUFACTURING, INC. (Continued) **S104541551**

neighborhood; and on the east and west by active and vacant industrial or commercial operations.Current Zoning/Use(s):The Site buildings are presently used for commercial business. Surrounding land uses include residential, commercial and industrial uses.Historical Use(s): Prior to 1975, Metalab, a laboratory furniture manufacturer, conducted operations at the Site. ALSY Manufacturing manufactured electric lamps and lampshades at this facility from 1975 through 1991. ALSYs manufacturing processes included bronze plating, electroplating, and antiquing. Waste material that was generated included metals plating waste, wastewater treatment sludge, paint thinner, acidic paint stripper, alkaline paint stripper, and 1,1,1-trichloroethane. A remedial investigation was completed in several phases between 1995 and 2003. A Record of Decision (ROD) was issued March 2005. The ROD required a soil vapor intrusion assessment, rerouting the drainage of the parking lot, excavation/disposal of contaminated dry well sediments and installing monitoring wells between the site and a public water supply well. The Remedial Design was completed June 2009. The Remedial Construction to implement the remedy began January 2010. The contract cost was $1.312 Million. Construction was completed in April 2010. The Project is in Site Management. Due to remaining contamination, an Environmental Notice was filed on the property on May 29, 2013. Groundwater monitoring is performed periodically.Site Geology and Hydrogeology:The site is underlain by glacially derived sand and gravel deposits. Groundwater is found approximately 50 feet below ground surface, and flow is in a southerly direction.

Env Problem: The primary contaminants of concern at the Site were associated with historic metal plating operations. Contaminants that exceeded clean-up guideline concentrations included arsenic, chromium, copper, nickel and zinc in the soil and nickel in the groundwater. Chlorinated solvents were also found in soil vapor on-site, triggering mitigation of overlying structures. A SSDS system has been installed by the current owner of the overlying structures.The remedial action for the site involved excavation and off-site disposal of contaminated soils and sludge/waste from drywells at the site. These source removal actions are expected to prevent further releases to groundwater and reduce nickel concentrations south of the site (dissolved nickel has exceeded the groundwater standard). A monitoring program is being implemented to ensure that these actions remain protective of active public water supply wells are located generally downgradient of the site.

Health Problem: Access to the site is unrestricted and a majority of the site is covered by buildings and pavement. However, contact with contaminated soil or groundwater is unlikely unless they dig below the surface materials. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Subslab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in both of the on-site buildings to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a concern for off-site

Site Description: Location: Magnusonics is a 3 acre site located at 290 Duffy Avenue, in the Hicksville section of the Town of Oyster Bay. Site Features: The entire site is paved or covered by the building structure. The northernmost and southernmost portions of the site are used as parking areas. Current Zoning and land use: Site is zoned light industrial and is presently occupied by Custom Closets and the Daily News. The site is located within a mixed use area that consists of commercial/industrial properties to the north, east and west and residential properties to the south. The Long Island Railroad tracks border the site to the north.Historical Uses: Magnusonics Devices manufactured computer tape recording heads, an operation which generated both hazardous and non-hazardous wastes. Processes included photographic etching of thin sheet metal as well as copper and chrome electroplating. The facility used a physical chemical treatment system that processed rinse waters from its plating and chemical milling operations, and discharged the treated wastewater, which contained metals and solvents, into on-site leaching pools. Plating wastes containing chromium and lead were discharged into a leaching pool. A ferric hydroxide sludge which contained lead and iron was generated as part of the facility's processes and discovered beneath the parking lot at the northern portion of the site. Site Geology and Hydrogeology:Groundwater was encountered at a depth of approximately 60 feet below land surface. Groundwater flow direction was determined to be to the south.

SPORT STAMP & THE CLOSET (Continued) **1000323314**

Env Problem:	Nature and Extent of Contamination:Remediation at the site is complete. The primary site contaminants of concern were metals in soils and groundwater. The selected remedy was performed and met the remediation goals identified in the Record of Decision.
Health Problem:	Remedial actions taken have eliminated the potential for contact with site-related contaminants.

Site Code: 55770
Site Description: Location: Magnusonics is a 3 acre site located at 290 Duffy Avenue, in the Hicksville section of the Town of Oyster Bay. Site Features: The entire site is paved or covered by the building structure. The northernmost and southernmost portions of the site are used as parking areas. Current Zoning and land use: Site is zoned light industrial and is presently occupied by Custom Closets and the Daily News. The site is located within a mixed use area that consists of commercial/industrial properties to the north, east and west and residential properties to the south. The Long Island Railroad tracks border the site to the north.Historical Uses: Magnusonics Devices manufactured computer tape recording heads, an operation which generated both hazardous and non-hazardous wastes. Processes included photographic etching of thin sheet metal as well as copper and chrome electroplating. The facility used a physical chemical treatment system that processed rinse waters from its plating and chemical milling operations, and discharged the treated wastewater, which contained metals and solvents, into on-site leaching pools. Plating wastes containing chromium and lead were discharged into a leaching pool. A ferric hydroxide sludge which contained lead and iron was generated as part of the facility’s processes and discovered beneath the parking lot at the northern portion of the site. Site Geology and Hydrogeology:Groundwater was encountered at a depth of approximately 60 feet below land surface. Groundwater flow direction was determined

SPORT STAMP & THE CLOSET (Continued) **1000323314**

to be to the south.
Env Problem: Nature and Extent of Contamination:Remediation at the site is complete. The primary site contaminants of concern were metals in soils and groundwater. The selected remedy was performed and met the remediation goals identified in the Record of Decision.
Health Problem: Remedial actions taken have eliminated the potential for contact with site-related contaminants.

Corrective Action Summary:
Event date: 07/30/1993
Event: RFI Workplan Approved

Event date: 04/20/1995
Event: RFA Completed

Event date: 05/24/1995
Event: RFA Determination Of Need For An RFI, RFI is Necessary;

SPORT STAMP & THE CLOSET (Continued) **1000323314**

Event date: 06/19/1995
Event: CA Responsibility Referred To A Non-RCRA Federal Authority, Corrective Action referred to another non-RCRA Federal Authority.

Event date: 08/26/1996
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 09/23/2011
Event: CA550RC

Event date: 09/23/2011
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 02/19/2014
Event: Corrective Action Process Terminated, Remedial Activities Completed

Event date: 02/20/2014
Event: CA800YE

Event date: 02/26/2014
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Summary Details:

Conditions at proposal October 15, 1984): Anchor Chemicals has operated on a 0.9-acre site in Hicksville, Nassau County, New York, since l964. The facility blends and packs chemicals for the graphic arts industry. In l978, Anchor Chemicalswas purchased by Chessco Industries. The new company is known as AnchorLith Kem Ko. Below the concrete floor of the building on the site are l7 storage tanks with capacities ranging from l,000 to 2,000 gallons. A number of the tanks leaked during various pressure tests performed from 1981 through January 1983 by the Nassau County fire marshall and AnchorLith Kem Ko. The company has installed three monitoring wells at the site. Analyses by the company indicate that thewells are contaminated with volatile organic chemicals similar to those contained at various times in the storage tanks. About 90,000 people draw drinking water from wells within 3 miles of the site. Status June 10, 1986): EPA isconsidering various alternatives for the site.

CERCLIS Site Alias Name(s):
Alias ID: 101
Alias Name: ANCHOR CHEMICALS
Alias Address: 500 W. JOHN STREET
HICKSVILLE, NY 11801
Alias Comments: Not reported
Site Description: LEAKING UNDERGROUND STORAGE TANK RELEASE OF VOLATILE ORGANICCOMPOUNDS.The Anchor Chemical Superfund Site is located at 500 West John Street in the Village of Hicksville, Town of Oyster Bay, Nassau County, New York. The surrounding area is primarily industrial. The Site is bordered to the west by

ANCHOR CHEMICALS (Continued) **1000243745**

a commercial property, to the south by West John Street and to the Northwest by Cantiague Park, a 125-acre recreational facility. A groundwater recharge basin lies to the east of the Site. The Site is approximately 1.5 acres in size and includes one 28,850 square foot, two story building. Before construction of the building in 1964, the Site was used for agricultural purposes. Anchor Chemical leased the Site from 1964 to 1978 and began manufacturing, blending, and storing chemicals for the graphic arts industry. The company operated two solvent mixing rooms and several container storage areas. In 1964, seventeen under-ground storage tanks (USTs) which ranged in size from 500 to 4,000 gallons were installed under the mixing rooms. The tanks were used to store chemicals and solvents, such as acetone, 1,1,1 trichloroethane, methylene chloride, 2-butoxyethanol and isopropyl alcohol. The chemicals were also stored in seven aboveground tanks, which ranged in size from 550 to 1,500 gallons and were removed in 1985. In addition, there are 9 dry wells and one drain, which are located in the parking lot on Site. These wells and drain were installed to collect rainwater runoff and drainage from the building. Most of the Site is paved with asphalt. Liquid which collects in the dry wells infiltrates into the soil. Four of the dry wells are contaminated with metals and volatile organic compounds (VOCs). The average depth to the water table at the Site is 50 to 60 feet. The following three aquifers underlay the Site, the Upper Glacial Aquifer, the Magothy Aquifer, and the Lloyd Aquifer. All three aquifers serve as a source of drinking water for Long Island, NY. The direction of groundwater flow is to the southwest. Analysis of groundwater samples taken from these aquifers revealed that they have been contaminated with inorganic and organic chemicals. In 1977, the Nassau County Health Department (NCHD) discovered 1,1,1 trichloroethane, trichloroethene (TCE) and tetrachloroethene (PCE) in liquid samples near drywell 1. In response, Anchor Chemical submitted a spill prevention plan to the NCHD. In 1978, Anchor Chemicals was purchased by Chessco Industries and became known as Anchor/Lith Kem-Ko. Company operations were terminated in 1985. Since 1985, the following tenants have occupied the Site: from 1985 to 1988, Emery Worldwide Freight; from 1988 to 1992, J.D. Brauner; from 1992 to 1994, Distributors of America; and from 1994 to present, Machinery Values. In May 1981, the Nassau County Fire Marshall notified Anchor that the 17 underground storage tanks (USTs) on Site had not been registered with the Fire Marshall or tested for leaks. In subsequent testing of 14 of the 17 USTs, 5 tanks failed air over product tank tightness tests. The five tanks were decommissioned in 1983. The three remaining tanks were tested from 1982 to 1983; one failed. In 1982, the NCHD requested that Anchor/Lith Kem-Ko investigate the possibility of groundwater and soil contamination at the Site. Three groundwater monitoring wells were installed in September 1982, and tests indicated the presence of 24,000 ppb of 1,1,1 TCA, 1,100 ppb of PCE, 350 ppb of dichloroethane, 170 ppb of chlorodibromomethane, 41 ppb of methylene chloride and 55 ppb of TCE. Soil samples taken during the installation of one well revealed 490 ppb of methylene chloride and 22 ppb of 1,1,1-TCA. In January 1983, the Site was included on the New York State Department of Environmental Conservations (NYSDEC's) list of hazardous waste sites in Nassau County. On June 10, 1986, the Site was added to the National Priorities List (NPL). On June 2,1989, EPA issued an Administrative Order on Consent to the K. B. Company, the owner of the property and successor to Kobar, to undertake a remedial investigation/feasibility study (RI/FS) to determine the nature and extent of contamination at the Site and to evaluate options for cleanup. On August 3, 1989, EPA issued an Administrative Order to Chessco Industries, which required it to participate and cooperate with K.B. Company. On March 31, 1992, EPA issued an Administrative Order to Anchor Lith/Kem-Ko, which also required it to participate and cooperate in the performance of the RI/FS. The RI field work was completed in February 1995, compiled by the potentially responsible parties (PRPs) and submitted to the EPA

ANCHOR CHEMICALS (Continued) **1000243745**

in March 1995. The Risk Assessment was finalized by the EPA on June 2, 1995. On September 15, 1995, K.B. Company, the owner of the property, Anchor Lith/Kem-Ko and Chessco Industries, a former owner of Anchor Lith/ Kem-Ko, were ordered by the EPA to remove the contaminated sediment and soil from four on Site dry wells. K.B. Company was issued an unilateral administrative order, while Anchor Lith/Kem-Ko and Chessco industries were issued an administrative consent order for the removal work. A workplan for the drywell removal action was approved by EPA on September 28, 1995. The actual removal of the material from the drywells occurred on September 29, 1995. On September 29, 1995, a No Action Record of Decision (ROD) was signed for the Site.

Site Description: The Anchor Lith Kem Ko site is located at 500 West John Street in the Village of Hicksville, Town of Oyster Bay, Nassau County, New York. The main site feature is a 28,850 square foot, two story building, a small lawn area in the front, and a paved parking lot in the front and rear of the building. The site is presently active and is zoned for commercial use. The surrounding parcels are predominantly commercial/industrial but recreational areas are located to the north. The nearest residential area is approximately 1,200 feet to the east.Contamination at the site is attributed to the building's past use as a chemical blending and packaging operation. Chemicals utilized during operations included acetone, 1,1,1-trichloroethane (TCA), methylene chloride, 2-butoxyethanol, and isopropyl alcohol. There were several on-site dry wells believed to have been impacted by site operations, as well as six underground storage tanks that failed tank tightness tests in the 1980's. A record of decision was issued for this site by the U.S. Environmental Protection Agency (EPA) on September 29, 1995. Additional investigations were conducted

ANCHOR LITH KEM KO (ANCHOR CHEM) (Continued) **S104648236**

	from 2008 to 2010 to evaluate off-site groundwater and soil vapor intrusion. All off-site groundwater concerns and soil vapor intrusion concerns have been adequately addressed and no further action is required. The local geology consists primarily of medium to fine sand with gravel and discontinuous clay layers. The Upper Glacial Aquifer is approximately 50 feet below ground surface and flows towards the south-southwest.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were chlorinated organics (TCA) and metals (chromium and lead) within the soil and groundwater. The 17 underground storage tanks have been abandoned in place. The 7 aboveground storage tanks have been removed. The impacted soils within the dry wells were removed. The site does not present a significant threat to the environment.
Health Problem:	Direct contact with contaminants in soil is unlikely because contaminated soils were excavated and properly disposed off the site. People are not coming into contact with the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of a building, is referred to as soil vapor intrusion. The potential for soil vapor intrusion to occur within the on-site building was evaluated and sampling indicated that soil vapor intrusion is not a concern for the building. In addition, sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Description: In 1963, AGO Associates purchased this property, which was then a 35 to 45 foot deep sand pit covering about 10 acres. Between 1963 and January, 1979 the pit was filled with construction and demolition material. Local residents recall that although a sign at the facility entrance advertised for "clean fill", all kinds of truckloads of waste were disposed there. In 1974 the Nassau County Health Dept. discovered several dozen drums reportedly containing industrial solvents lacquers, and thinners. The Health Department ordered the removal of the drums and others that were subsequently discovered at the site. By January 1975, all of the drums were

AGO ASSOCIATES (Continued) **S105972360**

	removed and disposed of. In September 1987, NYSDEC collected surficial soil samples from a portion of the site which was occupied by an asphalt company at the time. A Phase I report was completed in September of 1989. A State Funded Phase II investigation was completed in 1992. Despite the reports of drum disposal, analytical results from the monitoring wells revealed no significant contamination.
Env Problem:	Low levels of pesticides and VOCs were found in surface soil samples at the site. Although contamination has been reported in the wells downgradient of this site, connections have not been established between that contamination and past activities at the AGO Associates landfill operation.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description: The site consists of a one story masonry building located on a two acre parcel in a commercial/industrial setting in Nassau County. The site is located at the southern end of Frank Road. Historical operations at the facility consisted of importing commercial dry cleaning machinery for assembly, testing and distribution. In 1989, a spill of dry cleaning fluid (PCE) into an on-site leaching pool system contaminated subsurface soil and groundwater. The surrounding area consists of residential properties to the east and south and commercial properties to the north and west.An environmental assessment was conducted in December 1989 in response to an accidental discharge of PCE at the site. In March 1991, the NYSDEC oversaw the excavation and removal of approximately 450 tons of contaminated soil (maximum depth 29 ft bgs). In August 1992, a site screening investigation (SSI) was performed. Based on the findings interim remedial measures were performed in September 1992. The facility was connected to the municipal sewer system.The Remedial Investigation (RI) was conducted in September, 1992 (Phase I) and in September 1993 (Phase II). After the completion of an on-site and off-site remedial investigation a record of decision (ROD) was issued in March 1999. As prescribed in the ROD, groundwater sampling was conducted on a quarterly basis for three years starting in June 2000. On February 26, 2004, the site was delisted when the groundwater

BOWE SYSTEMS AND MACHINERY (Continued) **S103565986**

	quality goals (NYS Drinking Water Standards) were obtained. A soil vapor intrusion evaluation was initiated in September 2006 with subsequent activities in March 2007. The vapor investigation was completed in December 2007. The investigation did not identify any unacceptable indoor air contamination, but did find levels of chlorinated solvents in sub-slab soil vapor, which triggered a recommendation for action to protect indoor air quality.
Env Problem:	The primary contaminants detected at the site are tetrachloroethylene (PCE), 1,1,1 trichloroethylene (TCA), and trichloroethylene (TCE). Groundwater samples obtained at the site did not detect site contaminants in September 2006. Air samples collected in September 2006 and March 2007 detected elevated concentrations of site contaminants in the soil vapor and sub-slab soil vapor at the site. In door air levels at the on-site structure were below or slightly above background levels. Off-site structure sampling detected minimal impacts from site contaminants.
Health Problem:	The site is covered by buildings and pavement so public exposures to contaminated soils are not expected unless excavation occurs on the site. Exposures to contaminated groundwater via drinking water are not expected because public water serves the area and groundwater levels are below applicable standards, criteria, and guidance values. The potential for soil vapor intrusion was investigated, and no further actions were necessary for the off-site structures; however, the potential for future exposures via soil vapor intrusion into the on-site structure exists.

Site Description: The Hercules Machine site is located in a urban portion of Nassau county, NY. The site address is 550 West John Street, Hicksville.The predominant feature is a building that occupies roughly a third of the site. There is a parking lot and paved area that occupies the remaining area. The current operations at the site are believed to be related to washing machine repair. The surrounding properties are current or former hazardous waste sites. There are impacted municipal wells downgradient of this site. There is a golf course on the northern border of this site. No previous investigations are known to have taken place. A State Funded site characterization has generated a records report for this site. It has been determined that the site does not qualify for listing on the registry.
Env Problem: A records search report has been evaluated by the Department. The site has been classified as N. No further investigation is planned at this time.

Site Description: Location: The Metco site is located at 325 Duffy Avenue in suburban Hicksville. The site is about 6.8 acres and is bounded by Henrietta Street to the west.Site Features: The main site features include one large building surrounded by parking lots and roadways. A storm water recharge basin is located in the southeastern corner of the site.Current Zoning and Land Use: The property is currently zoned Commercial; storage, warehouse and distribution. The surrounding area is a mix of commercial and industrial use. The nearest residential property is about 140 feet east of the site.Past Use of the Site: The site has been historically used for light manufacturing and metal working, machining, metal finishing (including a vapor degreaser), and metal spraying. These prior uses appear to have led to site contamination. Nassau County Department of Health sampling of the wastewater discharge point and on-site private water well were reported to have solvent related contaminantsSite Geology and Hydrogeology: The geology at the site generally consists of stratified sand and gravels. Groundwater lies approximately 53 feet below the land surface and flows to the south-southwest.
Env Problem: Nature and Extent of Contamination: Based on the investigations conducted to date, the primary contaminants of concern are metals and chlorinated volatile organic compounds (solvents).Soil Soil contamination consisted of metal and polycyclic aromatic hydrocarbon (PAH) contaminants above standards. Maximum shallow surface soil sampling results reported chromium of 337 mg/kg, above the 10 mg/kg Soil Cleanup Objective (SCO); Nickel at 64 mg/kg, above the 13 mg/kg SCO. Slightly elevated arsenic, copper, iron, mercury and zinc were also present in shallow soils. Maximum subsurface soil results were reported slightly above SCOs for chromium and iron.Groundwater On-site groundwater contamination in excess of Standards, Criteria and Guidance (SCGs) was reported for 1,1,1, Trichloroethane (1,1,1,TCA) and multiple metals. The TCA was reported at 9.6 ug/l and slightly exceeded the SCG of 5 ug/l. Cadmium was reported at 9.3 ug/l and slightly exceeded the SCG of 5 ug/l; chromium was reported at 2190 ug/l and exceeded the SCG of 50 ug/l; copper at 723 ug/l exceeded the SCG of 200 ug/l; lead was reported at 340 ug/l above the 25 ug/l SCG; nickel was reported at 467 ug/l above the 100 ug/l SCG; and thallium was estimated at 6.4 above the SCG of 0.5 ug/l. Potassium, iron, manganese, sodium and selenium also had results above SCGs.Soil Vapor & Indoor Air Tetrachloroethene (PCE), Trichloroethene (TCE), Trichlorofluromethane, Methylene Chloride, Acetone and 1,1,1 TCA were detected in on-site soil vapor. The maximum PCE was reported at 876 ug/m3, maximum TCE at 1461 ug/m3,

METCO DIVISION PERKIN-ELMER (Continued) **1000175687**

	maximum Trichlorofluromethane at 400 ug/m3, maximum Methylene Chloride at 647 ug/m3, maximum Acetone at 202 ug/m3 and 1,1,1 TCA at 5205 ug/m3. No sub-slab or indoor air testing has been conducted.Significant Threat: This site presents a significant environmental threat because the dissolved groundwater contamination is impacting a sole-source aquifer.
Health Problem:	People are not drinking the contaminated groundwater because the area is serviced by a public water supply that obtains its water from a different source. The site is not fenced, therefore people who come onto the site may come into contact with contaminants in the soil by digging on or below the ground surface, and otherwise disturbing the soil.Volatile organic compounds in the groundwater may move into the soil vapor (air space within the soil), which in turn may move into overlaying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Based on previous soil vapor sampling, the potential for soil vapor intrusion to affect the indoor air quality of the on-site building exists. The NYSDOH has insufficient information to determine whether soil vapor intrusion is a concern for off-site buildings.

Following information was gathered from the prior CERCLIS update completed in 10/2013:
Site ID: 0201340
Federal Facility: Not a Federal Facility
NPL Status: Not on the NPL
Non NPL Status: Deferred to RCRA

Program Priority:
Description: RCRA Deferral Audit

Description: RCRA Deferral - Lead Confirmed

CERCLIS-NFRAP Assessment History:
Action: SITE INSPECTION
Date Started: / /
Date Completed: 01/01/90
Priority Level: Deferred to RCRA (Subtitle C)

Action: DISCOVERY
Date Started: / /
Date Completed: 10/01/80
Priority Level: Not reported

Action: PRELIMINARY ASSESSMENT
Date Started: 09/01/84
Date Completed: 09/01/84
Priority Level: Low priority for further assessment

Action: ARCHIVE SITE
Date Started: / /
Date Completed: 01/31/97
Priority Level: Not reported

Corrective Action Summary:

Event date: 01/16/1990
Event: Stabilization Measures Implemented, Primary measure is source removal and/or treatment (e.g., soil or waste excavation, in-situ soil treatment, off-site treatment).

Event date: 01/16/1990
Event: RFA Determination Of Need For An RFI, RFI is Necessary;

Event date: 01/16/1990
Event: RFI Imposition

Event date: 01/30/1990
Event: RFI Workplan Approved

Event date: 01/30/1994
Event: CA610

Event date: 04/30/1994
Event: Stabilization Construction Completed

Event date: 04/03/1995
Event: RFA Completed

Event date: 05/12/1995
Event: RFA Determination Of Need For An RFI, RFI is Necessary;

Event date: 08/22/1996
Event: CA Prioritization, Facility or area was assigned a medium corrective action priority.

Event date: 09/27/1996
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity because of a lack of technical data. An evaluation has been completed, but further data is necessary to determine stabilization measures, feasibility or appropriateness. This status should be changed when data becomes available.

Event date: 09/27/1996
Event: Stabilization Measures Evaluation,This facility is amenable to stabilization activity based on the status of corrective action work at the facility, technical factors, the degree of risk, timing considerations and administrative considerations.

Event date: 03/30/1997
Event: CA610

Event date: 03/30/1997
Event: RFI Approved

Event date: 05/30/1997
Event: Stabilization Construction Completed

Classification: Significant threat to the public health or environment - action required.
Region: 1
Acres: 11.5
HW Code: 130020
Record Add: 11/18/1999
Record Upd: 04/25/2016
Updated By: GTBOBERS
Site Description: Location: The General Instrument Site is located in an industrial and suburban portion of Nassau County, New York. The site occupies 11.5 acres at the northeast corner of the intersection of West John Street and Cantiague Rock Road in Hicksville. Site Features: The main site features include several large, abutting one- and two-story buildings surrounded by paved parking lot. Current Zoning and Land Use: The site is presently leased for commercial and light industrial uses including warehousing, distribution and manufacturing. The surrounding parcels are generally industrial and commercial use. A school is located nearby to the west of Cantiague Rock Road. The nearest residential area is about 400 feet northwest of the site. Past Use of the Site: Prior uses of a variety of solvents and acids during the production of microelectronic components have led to site and groundwater contamination. The effluent from production was discharged into a waste lagoon and drywells. During 1985, the on-site waste lagoon area was partially remediated under the oversight of the Nassau County Dept. of Health. Liquid waste, sludge and shallow soils were removed from the lagoon. Operable Units: The site is divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) is on-site soils and source areas while OU2 consists of contaminated groundwater. Additional investigation activities for OU2 are being managed by USEPA under Site No. 130215.Site Geology and Hydrogeology: The

FORMER GENERAL INSTRUMENT CORPORATION (Continued) **1000212438**

geology at the site generally consists of stratified sand and gravels. The depth to water is about 60 feet below the land surface. The groundwater generally flows in a southerly direction.

Env Problem: Nature and Extent of Contamination: For OU1; On-site SoilsBased upon investigations conducted to date, the primary contaminants of concern for OU1 included chlorinated and petroleum volatile organic compounds (VOCs), including tetrachloroethene, trichloroethene, 1,2-dichlorobenzene, ethylbenzene, xylene, vinyl chloride and other breakdown products. Soil- Contaminants of concern were present in the waste lagoon area soils and sludge, and in on-site soils in other areas, above standards and guidance values.Groundwater- On-site groundwater has been contaminated with chlorinated and petroleum volatile organic compounds (VOCs). The primary contaminants of concern include tetrachloroethene, trichloroethene, dichlorobenzene, ethylbenzene, xylene, vinyl chloride and other breakdown products. Groundwater standards have been exceeded. Continuing investigations indicate a plume of groundwater contamination has migrated off-site and extends generally south beyond the property border and beyond Old Country Road.Soil Vapor and Indoor Air- Soil vapor contamination was present in areas of shallow contaminated water and/or contaminated soil. On-site soil vapor contamination has been addressed during remediation by excavation and Soil Vapor Extraction (SVE).For OU2; GroundwaterGroundwater: The primary contaminants of concern for OU2 include chlorinated and petroleum volatile organic compounds (VOCs), including tetrachloroethene, trichloroethene, dichlorobenzene, ethylbenzene, xylene, vinyl chloride and other breakdown products. Groundwater standards have been exceeded.

Health Problem: Soil contamination is beneath buildings or pavement and dermal exposures are unlikely. Exposures to site-related contaminants in groundwater are not expected since the area is served by public water. Industrial and monitoring wells downgradient of the site are contaminated with volatile organic compounds (VOCs). The Hicksville Plant 5 supply wells one mile downgradient of the site treat raw water to remove low levels of VOC contamination.The water is monitored routinely to verify compliance with New York State drinking water standards. Recent monitoring near an outpost well detected part per million levels of VOCs in groundwater near the Plant 5 supply wells. Increasing VOC contaminant levels in the Plant 5 raw water are prompting the upgrade of the current treatment system to handle the impending plume. This Record Modified by TEB04 on 3/31/2010.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/05/2016

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database
This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System
New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

HICKSVILLE NORTH GARAGE
W JOHN ST
HICKSVILLE, NY 11801

TARGET PROPERTY COORDINATES

Latitude (North):	40.767789 - 40° 46' 4.04''
Longitude (West):	73.530986 - 73° 31' 51.55''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	623984.2
UTM Y (Meters):	4513806.5
Elevation:	139 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940537 HICKSVILLE, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

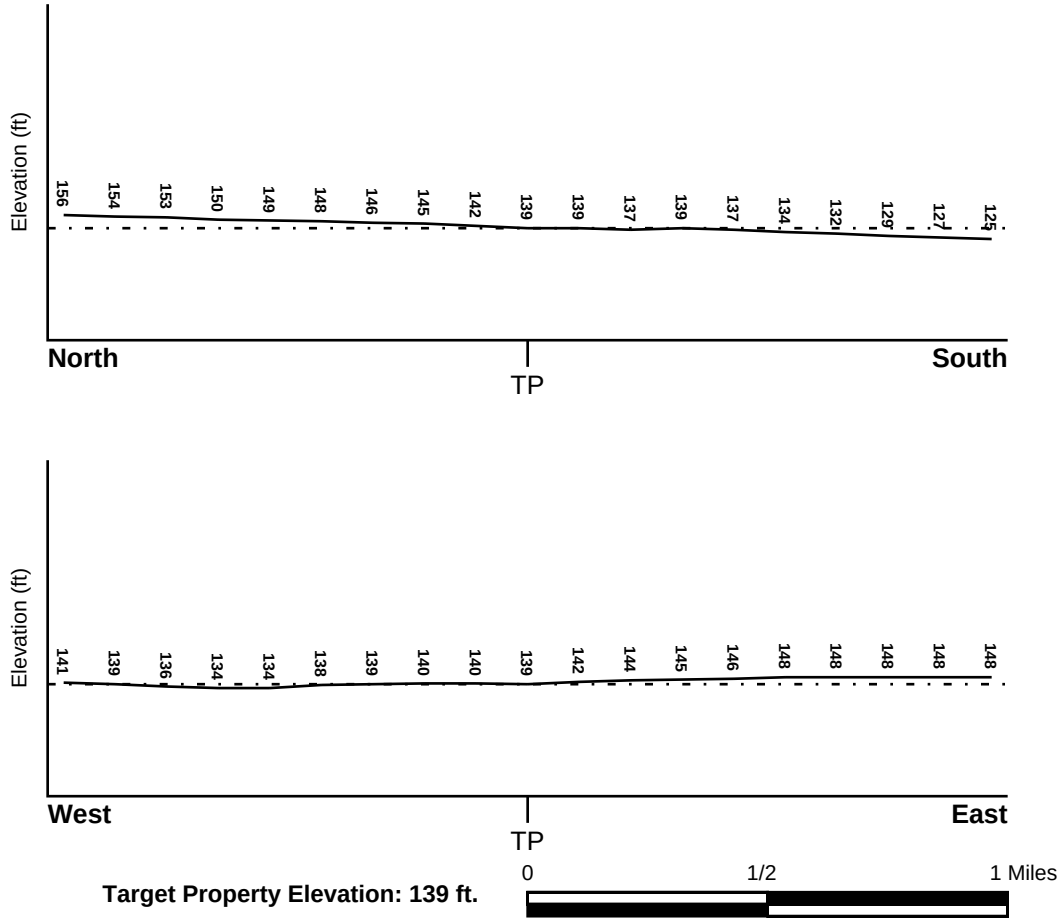
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
36059C0143F	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
36059C0141F	FEMA Q3 Flood data
36059C0145F	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HICKSVILLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile SW
Site Name:	Alsy Manufacturing
Site EPA ID Number:	NYD981184237
Groundwater Flow Direction:	South
Inferred Depth to Water:	approximately 60 feet.
Hydraulic Connection:	The surficial aquifer and underlying aquifer are hydraulically connected.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Subject: FOIL Request :: W019404-031517

Dear Samantha :

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 3/15/2017 and given the reference number FOIL #W019404-031517 for tracking purposes. You may expect the Department's response to your request no later than **4/12/2017**.

Record Requested: **: Matrix is performing an environmental due diligence for a Site called Hicksville North Garage, located at John Street, Hicksville, Nassau County, NY (Block 184, lot 15). This site is currently a parking lot. Matrix is requesting information and files including but not limited to, remedial action and permits, underground storage tanks, above ground storage tanks, tanks and building permits, health and environmental violations, discharges/releases of petroleum and hazardous material, spills, EPA correspondence, inspections, health and environmental investigations, historic property ownership, existing and former tenants, fires, potable wells, monitoring wells, septic systems, and other records not listed herein.**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

RE: PUBLIC RECORDS REQUEST of 3/15/2017, Reference # W019405-031517

Date: 03/15/2017

Dear Samantha Adler,

I write regarding your Freedom of Information Law (FOIL) request seeking:
Matrix is performing an environmental due diligence for a Site located at Barclay Avenue, Hicksville, Nassau County, NY (Block G, lot 231, 232, and 227). This site is currently a parking lot. Matrix is requesting information and files including but not limited to, remedial action and permits, underground storage tanks, above ground storage tanks, tanks and building permits, health and environmental violations, discharges/releases of petroleum and hazardous material, spills, EPA correspondence, inspections, health and environmental investigations, historic property ownership, existing and former tenants, fires, potable wells, monitoring wells, septic systems, and other records not listed herein..

In order for the Department to accurately search for the records you seek, we need you to give us more specific information describing the records.

1. Please visit https://mycusthelp.com/NEWYORKDEC/_rs/RequestLogin.aspx within two weeks of the date of this message to log into your DEC FOIL Request account, where you can send a Message to the Department clarifying your request. Your email address is your username for logging in.
2. In your Message, please provide as much of the following information as you can:

    - The name of the facility
    - An accurate street address for the property or facility
    - A permit number, if applicable
    - The nature of your request (exactly what information are you looking to obtain)
    - The name of the property owner
    - The Spill Number when seeking records of chemical or petroleum spill incidents

You may find Spill number information on the Department's website, in the online Spill Incidents Database at http://www.dec.ny.gov/cfmx/extapps/derexternal/index.cfm?pageid=2.

If your search of the Spill Incidents Database reveals that a spill number does not exist for a site or location about which you seek spill information, please state that no spill number exists in your reply to this Message.

Again, We encourage you to send your reply from your online customer DEC FOIL account in the Department's by email, which will facilitate faster processing of your request.

Please reference FOIL request W019405-031517 in all your communications with Department regarding this request.

If we do not receive your reply within two weeks of the date of this message, your request will be closed.

If you have any questions in the interim, please call me at 631 444-0202 and refer to FOIL request W019405-031517.

Sincerely,
Region 1 FOIL Coordinator

Fax No: 516-624-6331	Project Name: Environmental Due Diligence
Pages (Including Cover Sheet): 2	Matrix No: 16-144

To Whom It May Concern

Matrix is performing environmental due diligence for the property located on West Barclay Street, Hicksville, Oyster Bay, Nassau County, Long Island, New York (Section 11, Block G, Lots 227, 231, 232, [see attached tax map]). Matrix requests all information/files including but not limited to; underground storage tanks, aboveground storage tanks, permits, violations, discharges/releases, spills, NYSEDC correspondence, hazardous materials, inspections, investigations, historic property ownership, existing and former tenants, fires, potable wells, monitoring wells, septic systems, and any additional records not listed herein.

If you have any questions and/or concerns regarding this request, please feel free to contact on the above telephone number.

Thank you,

Samantha Adler

Matrix New World Engineering
26 Columbia Turnpike
Florham Park, NJ 07932
(973) 240-1800 - Telephone, (973) 240-1818 - Fax

To: Cindy Or Linda	**From: Samantha Adler**
Title: Town Clerk	**Title: Environmental Scientist**
Company: Town of Oyster Bay Clerk's Office	**Date: March 15, 2017**
Fax No: 516-624-6331	**Project Name: Environmental Due Diligence**
Pages (Including Cover Sheet): 2	**Matrix No: 16-144**

To Whom It May Concern

Matrix is performing environmental due diligence for the property located on West Barclay Street, Hicksville, Oyster Bay, Nassau County, Long Island, New York (Section 11, Block G, Lots 227, 231, 232, [see attached tax map]). Matrix requests all information/files including but not limited to; underground storage tanks, aboveground storage tanks, permits, violations, discharges/releases, spills, NYSEDC correspondence, hazardous materials, inspections, investigations, historic property ownership, existing and former tenants, fires, potable wells, monitoring wells, septic systems, and any additional records not listed herein.

If you have any questions and/or concerns regarding this request, please feel free to contact on the above telephone number.

Thank you,

Samantha Adler

Commisioner Richard Blankfien
Town of Oyster Bay
Building Department
Audrey Ave.
Oyster Bay N.Y. 11771

03393

Dear Commisioner Blankfien,

Pursuant to my conversation with Emil Stein, on Friday August 21, 1987. This letter is to inform you that it is the intent of the Hicksville Fire Department to erect a 30'x30' tent on Town of Oyster Bay property. The property is located on West Barclay Street in Hicksville 100' East of Marion Street.

Please note that in accordance with direction given by Mr. Stein and his staff, the Hicksville Fire Department has already submitted a properly executed building permit application, and an application for a structure other than a permanant structure. Attached to those applications were both the tent manufactures flame spread certificate and the Nassau County Fire Marshals Tent Permit.

Also be advised that on Friday August 21, 1987, the Hicksville Fire Department Labor Day Committee was informed by both Supervisors Bell's office and Councilman Clark's office that our request to use the above mentioned town property was granted.

Sincerely,

James Cammarata
Chairman Labor Day Parade
and Drill Committee

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Matrix New World Eng.,Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2016 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc. or its affiliates is prohibited without prior written permission.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E 2600).

TARGET PROPERTY INFORMATION

ADDRESS

HICKSVILLE NORTH GARAGE
W JOHN ST
HICKSVILLE, NY 11801

COORDINATES

Latitude (North):	40.767789 - 40° 46′ 4.03656″
Longitude (West):	73.530986 - 73° 31′ 51.538696″
Elevation:	139 ft. above sea level

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records.

Site	Database(s)
AGO ASSOCIATES WEST JOHN STREET HICKSVILLE, NY 11801	SWF/LF

EXECUTIVE SUMMARY

PHYSICAL SETTING INFORMATION

Flood Zone:	Available
NWI Wetlands:	Available

AQUIFLOW®

Search Radius: 0.333 Mile.

No Aquiflow sites reported.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported
Hydric Status:	Hydric Status: Soil does not meet the requirements for a hydric soil.
Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

Soil Layer Information

	Boundary			Classification			
Layer	**Upper**	**Lower**	**Soil Texture Class**	**AASHTO Group**	**Unified Soil**	**Permeability Rate (in/hr)**	**Soil Reaction (pH)**
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:	silt loam loamy sand sandy loam fine sandy loam
Surficial Soil Types:	silt loam loamy sand sandy loam fine sandy loam
Shallow Soil Types:	sandy loam
Deeper Soil Types:	unweathered bedrock very gravelly - loamy sand stratified sandy loam

EXECUTIVE SUMMARY

SEARCH RESULTS

Unmappable (orphan) sites are not considered in the foregoing analysis.

RECORD SOURCES AND CURRENCY

To maintain currency of the following databases, EDR contacts the appropriate agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

PRP: Potentially Responsible Parties
Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

A listing of verified Potentially Responsible Parties

Date of Government Version: 10/25/2013
Number of Days to Update: 3
Last EDR Contact :02/10/2017

Source: EPA
Telephone: 202-564-6023

RMP: Risk Management Plans
Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

E DESIGNATION: E DESIGNATION SITE LISTING
Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

ERP: Environmental Restoration Program Listing

Standard Environmental Record Source: State and tribal Brownfields sites

Search Distance: 0.333 Mile

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

HIST SPILLS: SPILLS Database

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

2020 COR ACTION: 2020 Corrective Action Program List

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.25 Mile

RECORD SOURCES AND CURRENCY

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

SEMS: Superfund Enterprise Management System

Standard Environmental Record Source: Federal CERCLIS

Search Distance: 0.333 Mile

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

UMTRA: Uranium Mill Tailings Sites

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.333 Mile

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US BROWNFIELDS: A Listing of Brownfields Sites

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.333 Mile

RECORD SOURCES AND CURRENCY

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

Standard Environmental Record Source: Historical Gas Stations

Search Distance: 0.125 Mile

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Date of Government Version: 02/20/2007

EDR MGP: EDR Proprietary Manufactured Gas Plants

Standard Environmental Record Source: Former manufactured Gas Plants

Search Distance: 0.333 Mile

RECORD SOURCES AND CURRENCY

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date of Government Version: 08/28/2009

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5' minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW® Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW® Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services. The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Prospective Landowner And/Or User Questionnaire

Subject Property Name:	Hicksville Parking Lot on John Street		
Subject Property Address:	John Street, Hicksville		
QUESTION	**YES**	**NO**	**UNK?**
1. Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property?		**X**	
2. Are you are aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the subject property?		**X**	
3. Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?		**X**	
4. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?			**X**
5. Are you aware of any activity use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?			**X**
6. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants?		**X**	
7. Are you aware of commonly known or reasonably ascertainable information about the property? For example: Do you know the past uses of the property?		**X**	
8. Do you know specific chemicals that are present or once were present at the property?		**X**	
9. Do you know of spills or other chemical releases that have taken place at the property?		**X**	
10. Do you know of environmental cleanups that have taken place at the property?		**X**	
11. Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?			**X**
12. Has a title search been performed? If yes, please attach.			**X**
13. Is the property or has the property been used as a gasoline station, motor repair facility, commercial printing, dry cleaners, photo developing, landfill, industrial use, waste treatment or disposal facility?			**X**
14. Are there currently any damaged or discarded automotive or industrial batteries, pesticides, paints, or other chemicals at the subject property?			**X**
15. Are there currently any industrial drums or chemicals at the subject property?			**X**
16. Are you aware of contaminated fill at the subject property? (i.e. Fill dirt from off-site.)			**X**
17. Are there currently any pits, ponds, or lagoons in connection with waste disposal or treatment at the subject property?			**X**
18. Are there any current or previous underground storage tanks or aboveground storage tanks at the subject property?			**X**
19. Are there currently any vent pipes, fill pipes, or access ways protruding from the ground at the subject property?			**X**
20. Is the subject property served by a private well and or a private septic system?			**X**
21. Does the property discharge industrial wastewater (excluding sanitary sewer)?			X
22. Are there any monitoring wells at the subject property?

FEMA FLOOD INSURANCE RATE MAP

National Flood Hazard Layer FIRMette

Legend

- Cross-Sections
- Base Flood Elevations

Flood Hazard Zones

- 1% Annual Chance Flood
- Regulatory Floodway
- Special Floodway
- Area of Undetermined Flood Hazard
- 0.2% Annual Chance Flood
- Future Conditions 1% Annual Chance Flood Hazard
- Area with Reduced Risk Due to Levee

LOMRs

- Effective

Map Panels

- Digital Data
- Unmodernized Maps
- Unmapped

This map complies with FEMA's standards for the use of digital flood maps. The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. The base map shown complies with FEMA's base map accuracy standards.

The NFHL is a living database, updated daily, and this map represents a snapshot of information at a specific time.

Flood risks are dynamic and can change frequently due to a variety of factors, including weather patterns, erosion, and new development. FEMA flood maps are continually updated through a variety of processes. Users should always verify through the Map Service Center (http://msc.fema.gov) or the Community Map Repository that they have the current effective information.

NFHL maps should not be created for unmapped or unmodernized areas.

WEST BARCLAY STREET
SECTION 11 BLOCK G, LOT S 227, 231AND 232
HICKSVILLE, TOWN OF OYSTER BAY, NASSAU COUNTY, NEW YORK
MATRIX NO. 16-144

Dear Mr. Aksman:

Matrix New World Engineering (Matrix) is pleased to present this Phase I Environmental Site Assessment (ESA) Report for the above referenced site.

This report summarizes the findings of the site reconnaissance, the review of historic and current uses of the site to identify contamination by hazardous substances or waste, the review of governmental databases, and the review of other pertinent data. No sampling or laboratory analysis of any media was performed as part of this Phase I ESA.

As a result of the Phase I ESA, two Recognized Environmental Conditions (RECs) were identified on the site.

If you have any questions regarding the information contained in this report, please contact us at (973) 240-1800.

Sincerely,

Brian Crespi
Project Manager

Mindy Chassin Horowitz
Program Director

1.0 SUMMARY

Matrix New World Engineering, Land Surveying and Landscape Architecture, P.C. (Matrix) was retained by Gannett Fleming–AECOM Rail Road Expansion Partnership, a Joint Venture between Gannett Fleming Engineers and Architects, PC and AECOM USA, Inc. (the "JV") to provide environmental services to the Metropolitan Transportation Authority (MTA) and Long Island Rail Road (LIRR) in support of the proposed installation of a third track, railway grade crossing separations and/or closures and infrastructure improvements between the Floral Park Station and the Hicksville Station, known as the "LIRR Expansion Project".

As part of the project, Matrix has been retained to complete a Phase I Environmental Site Assessment (ESA) for the West Barclay Street parking lot, Hicksville, Nassau County, New York (Site), to be acquired as part of the project. The Phase I ESA has been performed in accordance with Attachment B of the LIRR's Technical Scope of Work (TSOW) for the LIRR Expansion Project from Floral Park to Hicksville (January 2016). The purpose of the Phase I ESA is to gather information to be used in the acquisition process. This Phase I ESA has been prepared in general accordance with the American Society for Testing and Materials (ASTM) Designation E 1527-13 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and ASTM Designation E 2600-15 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions.* The following report summarizes the conclusions and opinions representing Matrix's best professional judgment based on information obtained during the Phase I ESA.

1.1 Site Summary

Town of Oyster Bay owns and operates a parking lot facility in Hicksville, Town of Oyster Bay, Nassau County, New York. The approximately 1.4-acre Site is improved with an asphalt paved parking lot. The Site was developed sometime prior to 1938 and was utilized for truck and machinery storage for Karlson & Reed, Inc. Contractors from sometime prior to 1947 to at least 1978. Based on a review of historic aerial photos, prior to 1980, the truck machinery storage structure was demolished. The Site was asphalt paved sometime around 1985 and has been used as a parking lot for the Town of Hicksville from 1994 to present.

1.2 Recognized Environmental Conditions

Matrix performed a Phase I ESA of the site at West Barclay Street in Hicksville, Town of Oyster Bay, New York in general conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 7.3 of this report. This assessment has revealed the following REC(s) in connection with the Site:

- Former industrial use of the property for truck and machinery storage under the name Karlson & Reed, Inc. Contractors from sometime prior to 1947 to at least 1978. This usage potentially entailed the storage and usage of petroleum products and solvents for maintenance activities.
- Vapor Encroachment Condition (VEC): A Tier 1 Vapor Encroachment Screen (VES) was completed by Matrix using EDR's Vapor Encroachment Screen Worksheet. Based on available information, a potential VEC was identified at the Site due to the presence of Long Island UK Auto, located at 125 W John Street, referenced in other databases as Saturn of Hicksville, at a higher elevation than the Site. This facility was listed as a historical auto station and was open in 2008. Currently, this facility is occupied by a Hertz Sales Office. The former occupant, Saturn of Hicksville, is found on the Resource Conservation and Recovery Act (RCRA) Conditionally Exempt Small Quantity Generator (RCRA CESQG), New York State Manifest (NY MANIFEST), New York State Aboveground Storage Tank (NY AST), Enforcement and Compliance History Online (ECHO), Facility Index System (FINDS) and New York State Underground Storage Tank (NY UST) databases. Spills on this property could potentially cause a VEC, due to its proximity.

A Recognized Environmental Conditions map is presented as Figure 5.

1.3 Controlled RECs

Controlled Recognized Environmental Conditions (CRECs) are recognized environmental conditions resulting from a past release of hazardous substances or petroleum products that have been addressed to the satisfaction of the applicable regulatory authority with hazardous substance or petroleum products allowed to remain in place subject to the implementation of required controls. Matrix did not identify any controlled RECs (CRECs), as defined by the ASTM Standard.

1.4 Historical RECs

Historical Recognized Environmental Conditions (HRECs) are recognized environmental conditions resulting from a past release of hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the property to any required controls. Matrix did not identify any historical RECs (HRECs), as defined by the ASTM Standard.

1.5 De Minimis Conditions

No *de minimis* conditions were observed or identified through interviews or records review of current or historical uses of the Site and adjoining properties.

1.6 Other Findings

The term "other finding" is not defined by ASTM; rather, Matrix uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard. Although not a considered REC based on currently available information, Matrix identified the following other findings based on review of the regulatory databases and other historical documentation and observations made during the Site reconnaissance. Sites within 0.1 miles of the Site and at a higher elevation were determined to have the potential to impact the Site should a spill have occurred. There are no records of open spills or other known current sources of contamination from these facilities.

- The LIRR tracks are located immediately south of the Site. Typical contaminants associated with rail use include creosote and arsenic (used for treating railroad ties); herbicides (to limit vegetation growth); pesticides; solvents, diesel and other petroleum products associated with cargo loading and unloading, train car maintenance, fueling, etc.; polycyclic aromatic hydrocarbons (PAHs), which are constituents of partially combusted coal or petroleum-derived products, such as coal ash and fuel oil and, along with metals, are commonly found in urban fill material, likely used during track and station construction. These constituents in urban fill typically have low mobility.
- The property to the north-northwest (presumed upgradient and at a higher elevation) of the Site, directly across W. John Street, currently is the Hicksville Post Office, located at 185 W. John Street, has an active UST that was installed in February 1991. There are no known violations for this UST or the facility, which is also listed on the RCRA NONGEN/NLR, NY SPILLS database (two closed spills) and MANIFEST databases. Spills on this property could potentially impact the Site, due to its proximity.

1.7 Significant Data Gaps

- To date, responses to most FOIL requests submitted have not been received. All responses will be forwarded upon receipt with recommendations, if necessary.
- No exact address was given to Matrix from the client and so publicly available mapping services were used to determine the address. The potential addresses for this Site are 110-132 West Barclay Street.
- The entirety of the Site was inspected during Matrix's walkthrough, though most of the Site was covered by parked cars and snow, limiting a complete inspection.
- The 1925 and 1947 Sanborn Maps are missing visual information for the Site and surrounding area. A limitation was encountered in determining the historical use of the subject property. The earliest source of historical information reasonably ascertainable within the time frame of this report in which usage could be determined was an aerial photograph from 1938. At the time of the photograph, a portion of the Site appeared to be agricultural field crop land (a developed use per the ASTM Standard). Therefore, the ASTM E1527 requirement to determine all obvious uses of the property from the present back to the

property's first obvious developed use, or back to 1940, whichever is earlier, could not be achieved. However, based upon the identified agricultural land use, it is unlikely that there had been significant prior development; therefore, this data failure is not expected to impact the results of this assessment.

1.8 Non-scope Considerations

Matrix did not identify any non-scope considerations.

2.0 INTRODUCTION

2.1 Purpose

This Phase I ESA Report has been prepared by Matrix for LIRR for the property located at West Barclay Street (Section 11, Block G, Lots 227, 231, and 232) in Hicksville, Town of Oyster Bay, Nassau County, New York (Site). The objective of the Phase I ESA is to evaluate whether current or historical practices associated with the Site or nearby properties have the potential to have created, or to create in the future, a Recognized Environmental Condition (REC) at the Site. The term REC is defined by ASTM Standard 1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on or at a property due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. Historic information and current conditions and operations pertaining to the Site are addressed in this report.

2.2 Detailed Scope-of-Services

The scope of services for this project included a visual reconnaissance of the Site and neighboring properties; review of readily available Federal, state, county, and local regulatory records; examination of historic information and evaluation of current and past operations and activities on-site. Matrix reviewed/utilized historic aerial photographs, Sanborn Fire Insurance Maps, historic topographic maps and city directories as part of the Phase I ESA. Additionally, a regulatory database search was conducted by Environmental Data Resources Inc. (EDR), of Shelton, Connecticut for information available in governmental databases. The EDR Radius Map Report is provided in Appendix A.

The Phase I ESA also included an initial vapor encroachment screening (VES) to determine if there is a potential for vapors to occur in the subsurface below existing and/or proposed on-site structures from those hazardous substances, petroleum and petroleum products that consist of volatile organic compounds (VOC), semi-volatile organic compounds (SVOC) and inorganic volatile compounds. The VES meets the Tier 1 “non-invasive” screening requirements of ASTM E2600-13

2.3 Significant Assumptions

Information and records provided by the client, government agencies, and outside vendors retained by Matrix are assumed to be correct and complete.

2.4 Limitations and Exceptions

This Phase I ESA has been prepared for the exclusive use of MTA, LIRR and the JV. It represents a professional opinion and judgment based on information supplied by the present owner of the Site, information collected by

Matrix, and additional data and information provided by governmental agencies. Matrix only warrants that it provides services in accordance with generally-accepted practices in the engineering/environmental site assessment field. No other warranty or representation, either expressed or implied, is included or intended as part of its services, proposals, contracts, or reports. Matrix cannot guarantee, certify, or warrant that the Site is, or is not, free of environmental impairment/liabilities without conducting a site-specific subsurface investigation involving soil and groundwater laboratory analyses. Even with such a program, the data, and samples from any given soil boring or monitoring well will indicate conditions that exist only at that location, and may not necessarily apply to the Site as a whole.

In preparing this report, Matrix has relied on certain information provided by Federal, state, county, and local officials and other parties referenced herein, and on file of government agencies and others that were readily available at the time of this assessment. Although there may have been overlap of this information provided by these various sources, Matrix did not attempt to independently verify the accuracy or completeness of information reviewed or received during the course of this Phase I ESA.

Observations were made on all visible portions of the Site as indicated in the report. However, the Site was snow covered and most, if not all, parking spaces occupied during the Site reconnaissance. This is noted as a limitation.

As part of this assessment, Matrix submitted requests for information via the Freedom of Information Law (FOIL) to various governmental agencies. As of the preparation of this report, these requests may not have been fulfilled. The conclusions of this report are subject to change upon receipt of a response from these FOIL requests.

Mold, indoor air quality, asbestos, and lead-based paint surveys are excluded from the scope of this report.

2.5 Special Terms and Conditions

There are no special terms or conditions to the content of the report that are in addition to the scope outlined in Section 2.2.

2.6 User Reliance

This Phase I ESA was performed at the client's request utilizing a format consistent with the table of contents and report format specified in ASTM E 1527-13 Appendix X4.

This assessment is intended, where applicable to the standard of care, to satisfy the requirements of the ASTM Standard Practice for Environmental Site Assessments, as published in ASTM E1527-13. The independent

conclusions represent the best professional judgment of the Environmental Professional based on the conditions that existed and the information and data available to Matrix during the course of this assignment. Factual information regarding operations and conditions provided by the Client, owner, or the representative has been assumed to be correct and complete. The report may be distributed and relied upon by MTA, LIRR and the JV. Reliance on the information and conclusions presented in this report by other party(ies) is not authorized by Matrix, unless specifically stated.

3.0 SITE DESCRIPTION

On March 16, 2017, a site reconnaissance was conducted by Jordan Farber, Environmental Scientist, of Matrix to evaluate current land usage and identify any RECs that may be present throughout accessible portions of the Site and surrounding areas. Appendix B contains photographs taken during the site reconnaissance.

3.1 Location and Legal Description

The Site is located at West Barclay Street, Hicksville, Town of Oyster Bay, Nassau County, New York. The Site consists of one parcel (Section 11, Block G, Lots 227, 231 and 232) which is an asphalt paved parking lot.

The Site consists of approximately 1.4 acres. The Site is geographically located at 40° 46' 1.57" north latitude and 73° 31' 51.66" west longitude of the Hicksville, New York, U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle. A Regional Location Map and Topographic Map depicting the Site are presented as Figures 1 and 2, respectively. A Tax Map is presented as Figure 3.

3.2 Site General Characteristics

The Site consists of an asphalt-paved parking lot.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map (Hicksville, New York, 2013);	The site is about 140 foot above mean sea level (amsl).
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on-site, with a gentle downward slope to the north.
Hydrology		
Surface Water Runoff	Visual observations	Entire site is paved, surface water enters storm drains that discharge to the municipal storm sewer system.
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	Wantagh Reservoir, located approximately 5 miles to the southeast at its nearest point. The Reservoir ultimately discharges to the Seaman Pond.

Table 1: Physical Setting and Utility Information		
Conditions	**Source**	**Description**
Flood Plain	FEMA*	Facility personnel reported no known occurrences of flooding at the site. The site is not located within a 500-year flood zone. The FEMA Flood Insurance Rate Map (FIRM) is included in Appendix J.
Wetlands	NWI*; Visual observations	There are no federally-designated wetlands on-site. Matrix did not identify any obvious suspected wetlands at the site during the site visit.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map	Based on the topographic gradient sloping to the west/southwest, shallow groundwater likely flows to the southwest.
Depth to Groundwater	USGS	Specific information regarding depth to shallow groundwater was not readily available, but is expected to be at least 51 feet below ground surface, based on the USGS Long Island Depth to Groundwater Viewer[1]
On-Site Wells	Visual Observation	There are no production, monitoring, or injection wells on-site.
Nearest Groundwater Supply Wells	EDR database report	There are no federally registered public groundwater supply wells within a one-mile radius of the Site.
Geologic Conditions	EDR database report	Regional soils are identified as Urban land.
Site Utility Information		
Heating and Cooling Equipment	Visual Observation	There are no interior areas and thus no heating or cooling equipment associated with the Site.
Electricity Supplier	Visual Observation	There is no electricity service at the site
Natural Gas Supplier	Visual Observation	There is no natural gas service at the site
Use of Fuel Oil for Building Heat	Visual Observation	No current or former use of fuel oil reported.
Water Supplier	Visual Observation	There is no water service at the Site.
Sanitary Sewer	Visual Observation	There are no sanitary facilities on-Site. Local sanitary waste is treated by the Cedar Creek Water Pollution Control Plant

Table 1: Physical Setting and Utility Information		
Conditions	**Source**	**Description**
Stormwater Sewer	Visual Observation	Several stormwater collection sewer grates were observed on-Site and on streets surrounding the Site. Stormwater is handled by Nassau County Sewage Disposal District #3.
Septic Systems	Visual Observation	No current or former septic systems were reported.
Notes: FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory * - Source was provided in the EDR database report. 1-https://ny.water.usgs.gov/maps/li-dtw10/		

3.3 Current Use of the Property

According to http://lrv.nassaucountyny.gov/, the Site is currently owned by the Town of Oyster Bay and used as a municipal parking lot. A Site Plan Map is presented as Figure 4.

3.4 Description of Structures, Roads, Other Improvements On-Site

The Site consists of three tax parcels that comprise an improved rectangular-shaped asphalt-parking lot. West Barclay Street is adjacent to the North of the Site and the Long Island Rail Road (LIRR) tracks are adjacent to the south and elevated higher than the Site.

3.5 Current Uses of the Adjoining Properties

The property is located in a mixed residential/commercial land use area. The nearest residential area is located approximately 540 feet east of the Site. Based on discussions with facility personnel, Matrix's visual observations from the property boundary and public rights-of-way, and a limited review of publicly available information, a general determination of the current use of adjacent properties was developed, as described Table 2.

Table 2: Current Use of Adjacent Properties		
Direction	**Property/Land Use**	**Matrix's Observations**
North	West Barclay Street, a municipal parking lot, Hertz Car Rental, and a storage unit.	Pole-mounted transformer was identified. No staining, discharges, or evidence of PCBs were identified. No concerns were noted.

Table 2: Current Use of Adjacent Properties		
Direction	**Property/Land Use**	**Matrix's Observations**
East	Hicksville Water Department Building	A concrete-mounted transformer was observed on-site. No staining or evidence of PCBs were identified. No concerns were noted. The facility is fenced off from the public.
South	LIRR tracks	The railroad tracks are elevated, historic fill may be present.
West	Transformer Station, US. Post Office, and parking lot.	LIRR Transformer station (Substation G-20) has two transformers that are concrete mounted. No staining or evidence of PCBs were identified.
Notes: During the site visit, Matrix walked or drove by the borders of the properties that are shared with the subject site. Matrix did not enter the neighboring properties.		

3.6 Reason for Performing Phase I

Matrix was retained by the JV to perform a Phase I ESA as part of a due diligence evaluation prior to property acquisition.

3.7 Other

No additional information regarding the Site was provided.

4.0 RECORDS REVIEW

4.1 Standard Environmental Record Sources

A regulatory review of the Site and surrounding area was conducted through a search by EDR dated March 1, 2017. The review included inquiries into databases maintained by USEPA, as well as state agencies. A brief description of each database and the search results obtained during the Phase I ESA is presented below, for those databases where records were found within the corresponding search radii. The EDR Radius Map Report in its entirety is attached as Appendix A. The search was conducted in general accordance with ASTM E 1527-13 standards. The Site was not identified on the any of the below mentioned databases.

DATABASE SEARCH SUMMARY

Database	Search Distance (Miles)	Site Listed	Properties listed within a one-eighth-mile (0.125) radius	Surrounding Properties Listed
Federal Databases				
DELISTED NPL	1.00	No	0	1
CORRACTS	1.00	No	0	2
RCRA-LQG	0.25	No	0	1
RCRA-SQG	0.25	No	1	1

Federal Records

1. Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP): The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425. (e), sites may be deleted from the NPL where no further response is appropriate.

The Site was not identified on the Delisted NPL database. No Delisted NPL facilities were identified within a ½-mile radius of the Site. One Delisted NPL facility was identified between a ½-mile and a 1-mile radius. Based on the distance to the Site, there is limited potential for impact to the Site from the Delisted NPL facility. The Delisted NPL data was last updated on December 5, 2016 (EDR Inc, 2017).

2. Resource Conservation and Recovery Act (RCRA) Corrective Action Sites (CORRACTS): CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

   The Site was not identified on the CORRACTS database. No CORRACTS facilities were identified within a ¼-mile radius of the Site. Two CORRACTS facilities were identified on the CORRACTS database between a ½-mile and 1-mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from the CORRACTS facilities. The CORRACTS data was last updated on December 12, 2016 (EDR Inc., 2017).

3. Resource Conservation and Recovery Act (RCRA)-Large Quantity Generators (LQGs)- The RCRA-LQG database is US EPA's comprehensive information system, providing access to data supporting the 1976 RCRA and the 1984Hazardous and Solid Waste Amendments (HWSA). The database includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Large quantity generators (LQG) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

   The Site was not identified on the RCRA-LQG database. No RCRA-LQG facilities were identified within a ⅛-mile radius of the Site. One RCRA-LQG facility was identified between ⅛ mile and ¼-mile radius of the Site. Based on the distance of the facility to the Site, there is limited potential for impact to the Site from this RCRA-LQG facility should a release occur. The RCRA-LQG data was last updated on December 12, 2016 (EDR Inc., 2017).

4. Resource Conservation and Recovery Act (RCRA)- Small Quantity Generators: The RCRA-SQG database is USEPA's comprehensive information system, providing access to data supporting the 1976 RCRA and the 1984 Hazardous and Solid Waste Amendments (HWSA). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. SQGs generate between 100 kilograms (kg) and 1,000 kg of hazardous waste, hazardous waste per month.

   The Site was not identified on the RCRA-SQG database. One facility was identified on the RCRA-SQG database within ⅛-mile radius of the Site. AAAA-1 Auto Body is located at 112 Duffy Avenue at a lower elevation than the site. AAAA-1 Auto Body is a generator of benzene (D018), methyl ethyl ketone (D035), nonhalogenated solvents (xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol) (F003), and additional nonhalogenated solvents (toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyanol, and 2-nitroporpane (F005)). This property has received two violations, as follows: on April 24, 2013, AAAA-1 Auto Body received two violations for Pre-Transport of Generators and Preparedness and Prevention. The violations were corrected and the cases were closed on July 1, 2013. Based on the information provided, there is limited potential for impact to the Site from this RCRA-SQG facility.

   No RCRA-SQG facilities were identified between a ⅛-mile and ½-mile radius of the Site. The RCRA-SQG was last updated on December 12, 2016. (EDR Inc., 2017).

5. Resource Conservation and Recovery Act (RCRA)-Conditionally Exempt Small Quantity Generator (CESQG): The RCRA-CESQG database is USEPA's comprehensive information system, providing access

to data supporting the 1976 RCRA and the 1984 Hazardous and Solid Waste Amendments (HWSA). The database includes selective information on sites which generate, transport, store, treat and/or dispose hazardous waste as defined by RCRA. CESQGs generate less than 100 kilograms (kg) of hazardous waste, or less than 1 kg of acutely hazardous waste per month. The RCRA-CESQG database is administered by the EPA.

The Site was not identified on the RCRA-CESQG database. One RCRA-CESQG facility was identified within a ⅛-mile radius of the Site. Saturn of Hicksville is located at 125 W John Street at a higher elevation than the Site. EDR has incorrectly mapped this property on the north side of West John Street. It is located between West John and West Barclay Streets, directly north and upgradient of the Site. Saturn of Hicksville is identified as a historical generator of ignitable waste (D001), cadmium (D006), lead (D008), tetrachloroethylene (D039), and trichloroethylene (D040). No violations were found for this RCRA-CESQG facility. This site was also identified on the MANIFEST, UST, FINDS, AND ECHO databases. Based on the information provided, there is potential for impact to the Site from this RCRA-CESQG facility should a release occur. Based on its proximity to the Site and multiple listings, this facility is considered an other finding as defined by Matrix. One RCRA-CESQG facility was identified between ⅛-mile and ¼-mile radius of the Site, Bouchard Oil Transportation located at 77 Newbridge Road at a higher elevation than the Site. No violations have been identified for Bouchard Oil Transportation. No additional information about the facility was provided. Based on this information, there is a limited potential for impact to the Site from this RCRA-CESQG facility should a release occur. No RCRA-CESQG facilities were identified between ¼-mile and 1-mile radius of the Site. The RCRA-CESQG data was last updated on December 12, 2016 (EDR Inc., 2017).

State Records

6. Known Contaminated Sites Administered by NYDEC (NY State Hazardous Waste Site [SHWS]) Database: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These Sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites were cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous Waste Disposal Sites in New York State.

   The Site was not identified as a SHWS facility. No SHWS facilities were identified within a ½-mile radius of the Site. Ten SHWS facilities were identified between a ½-mile and a 1-mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from these SHWS facilities. The SHWS data was last updated on June 30, 2016 (EDR Inc., 2017).

7. NY Vapor Reopened: Vapor intrusion refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in the analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

   The Site was not identified as a NY Vapor Reopened facility. No NY Vapor Reopened facilities were identified within a ½-mile radius of the Site. Five NY Vapor Reopened facilities were identified between a ½-mile and 1-mile radius of the Site. Based on the distance to the Site, the lower elevation of the facilities to the Site, and the case statuses (3 of which are complete case statuses, two of which are underway) there is

limited potential impact to the Site from these NY Vapor Reopened facilities. The NY Vapor Reopened database was last updated on June 1, 2016 (EDR Inc., 2017).

8. New York Solid Waste Facilities/Landfill Sites (NY SWF/LF): Solid Waste Facilities/Landfill Sites type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the State, these may be active or inactive facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal.

   The Site was not identified as a NY SWF/LF facility. One NY SWF/LF facility was identified within a ⅛-mile radius of the Site, Ago Associates, although this facility is actually located at 449 West John Street, greater than ½ mile from the Site and erroneously mapped by EDR.
   Based on the distance of the facility to the Site, there is limited potential for impact to the Site from this facility. No NY SWF/LF facilities were identified between a ⅛-mile and ½-mile radius of the Site. Other than Ago Associates, no NY SWF/LF facilities were identified between a ½-mile and 1-mile radius of the Site.

9. New York Leaking Storage Tank Incident Reports (NY LTANKS): NY LTANKS contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking above ground storage tanks. The causes of the incidents are tank test failures, tank failure, or tank overfills.

   The Site was not identified as a NY LTANKS facility. One NY LTANK facility was identified within ⅛-mile radius of the Site, a residence located at 20 Wyckoff Street at a higher elevation than the Site. This facility is a private dwelling and had a tank failure on April 4, 1995. There was a known release of approximately 1 gallon of No. 2 fuel oil. NYSDEC was notified and spill No. 9500106 was assigned to this site. The corrective action was completed and the case was closed on April 4, 1995. Based on the information provided, there is limited potential for impact to the Site from this NY LTANK facility. Five NY LTANK facilities were identified between ⅛-mile and ¼-mile of the Site. Based on the distance of the facilities to the Site, there is limited potential impact to the Site from these facilities. Eighteen facilities were identified on the NY LTANKS database between ¼-mile and ½-mile radius from the Site. Based on the distance of the facilities to the site, there is limited potential for impact to the Site from these facilities. NY LTANKS database was last updated on February 6, 2017 (EDR Inc., 2017).

10. New York Underground Storage Tank (NY UST): The underground storage tank database contains registered USTs. USTs are regulated under Subtitle I of the RCRA. The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database.

    The Site was not identified as a NY UST facility. Four NY UST facilities were identified within a ⅛-mile radius of the Site.
    - Saturn of Hicksville is located at 125 West John Street at a higher elevation than the Site. This facility had a UST that was installed on September 1, 1961. According to the EDR database, the UST has since then been removed and although no removal date was provided, the last test date was in 1985. No other tank closure information was provided. This facility was also identified on the FINDS, RCRA-CESQG, ECHO, and NY MANIFEST databases. Based on the information provided, there is limited potential for impact to the Site from this facility. Based on its proximity to the Site and listings on multiple databases, this facility is considered an other finding as defined by Matrix.
    - The Hicksville Post Office is located at 185 W. John Street, at a higher elevation than the Site. This facility has an active double-walled UST that was installed on 2/1/1991. No additional information

was provided. Based on its proximity to the Site and listings on multiple databases, this facility is considered an other finding as defined by Matrix.

- An office building owned by 110 Stewart Ave Associates is located at 110 Stewart Avenue at a lower elevation than the Site. The office building facility has an active UST with a location ID of 39162. No additional information was provided. Based on the distance and the elevation of the facility to the Site, there is limited potential for impact to the Site from this facility.
- Kuno Steed Products Corp is located at 132 Duffy Avenue at a lower elevation than the Site. This facility had a UST that was installed on 03/01/1975 and was removed on 01/02/1990. The UST Location ID is 16918. Based on the information provided, there is no potential for impact to the Site from this facility.

Five NY UST facilities were identified between ⅛-mile to ¼-mile radius of the Site. Due to the distance of the facilities to the Site, there is no potential to impact the Site from these facilities.

11. New York Major Oil Storage Facility (NY MOSF): These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater.

    The Site was not identified as a NY MOSF facility. No facilities were identified within ¼-mile radius of the Site. One NY MOSF facility was identified between a ¼-mile and ½-mile radius of the Site. Based on the distance of the facility to the Site, there is no potential for impact to the Site from this NY MOSF facility. The NY MOSF database was last updated on December 28, 2016 (EDR Inc., 2017).

12. New York Chemical Bulk Storage (NY CBS): These facilities store regulated hazardous substances in above ground tanks with capacities of 185 gallons or greater, and/or in underground storage tanks of any size.

    The Site was not identified as a NY CBS facility. No facilities were identified within ⅛-mile radius of the Site. One facility was identified between ⅛-mile and ¼-mile radius of the Site. Based on the distance to the Site and the elevation, there is limited potential for impact from this NY CBS facility to the Site.

13. New York Above Ground Storage Tanks (NY AST): The AST database contains registered ASTs. The data comes from NYSDEC's Petroleum Bulk Storage (PBS) Database.

    The Site was not identified as a NY AST facility. One facility was identified as a NY AST within ⅛-mile radius of the Site. Saturn Service Hicks is located at 125 West John Street at a higher elevation than the Site. Two ASTs are currently in-service at this facility. Tank 001 is a 280-gallon waste oil AST. Tank 002 is a 500-gallon motor oil AST. No violations were identified in relation to the ASTs. Based on the information provided, there is a limited potential for impact to the Site from this NY AST facility if a spill were to occur. Based on its proximity to the Site and listings on multiple databases, this facility is considered an other finding as defined by Matrix.

    Six NY AST facilities were identified between ⅛-mile and ¼-mile radius of the Site. Based on the distance of the facilities to the Site, there is no potential for impact to the Site from the NY AST facilities.

14. New York Institutional Control (NY INST CONTROL): Environmental Remediation Sites that have institutional controls in place.

    The Site was not identified as a NY INST CONTROL facility. No facilities were identified as a NY INST CONTROL within ¼-mile radius of the Site. One facility was identified as a NY INST CONTROL between ¼-mile and ½-mile radius of the Site. Based on the distance and the elevation of the facility there is no

potential for impact to the Site from the NY INST CONTROL facility. The NY INST CONTROL database was last updated on November 14, 2016 (EDR Inc., 2017).

15. New York Brownfields (NY BROWNFIELDS): Brownfields Site List.

    The Site was not identified as a NY BROWNFIELD facility. No facilities were identified as a NY BROWNFIELD within ¼-mile radius of the Site. One facility was identified as a NY BROWNFIELD between ¼-mile and ½-mile radius of the Site. Based on the distance and elevation from the Site, this facility does not have potential to impact the Site. The NY Brownfield was last updated on November 14, 2016.

Records of Emergency Release Reports

16. New York Spills (NY SPILLS): data collected on spills reported to the NYSDEC. Is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

    The Site was not identified as a NY SPILLS facility. Thirteen NY SPILLS facilities were identified within ⅛-mile radius of the Site.

    - Gilison Residence is located at 65 West John Street at a higher elevation than the Site. The Gilison Residence is immediately adjacent to the east of the Site. On April 11, 2001, a # 2 Fuel Oil Spill was identified during a UST removal. The NYSDEC was informed and Spill No. 0100418 was assigned. Corrective action was taken and the case was closed on May 8, 2001. Based on the information provided, there is limited potential for impact to the Site from this SPILL facility.
    - Waler Maure is located at 145 West John Street at a higher elevation than the Site. On December 10, 1993, a traffic accident caused a spill of approximately 3 gallons of gasoline. NYSDEC was notified and Spill No. 9311048 was assigned. Corrective action was taken and the case was closed on December 23, 1993. Based on the status of this case, and the information provided, there is limited potential for impact from this NYSDEC facility to the Site.
    - Hicksville Post Office is located at West John Street and Maple Place and is at a higher elevation that the Site. Two spills have been recorded here. (1) On May 26, 2006, equipment failure caused a dielectric fluid spill of approximately 4 gallons. NYSDEC was notified and Spill No. 0602140 was assigned. Corrective action was taken and the case was closed on August 2, 2006. Based on the information provided, there is no potential for impact from Site for NY SPILLS database. (2) On August 28, 2009, a spill of approximately 4 gallons of transformer oil occurred in a vault. The spill was cleaned up and the spill number closed on February 5, 2010. This facility is also identified on the UST, RCRA NON GEN/NLR and MANIFEST database. Based on the closed status of these spills and the quantities spilled, there is limited potential for impact to the Site. Based on its proximity to the Site and listings on multiple databases, this facility is considered an other finding as defined by Matrix.
    - An unknown residence is located at 172 John Street at a higher elevation than the Site was identified as a NY SPILL. On July 5, 2011 equipment failure caused a spill of approximately 5 gallons of transformer oil. NYSDEC was notified and Spill No. 1103704 was assigned. Corrective action was taken and the case was closed on November 4, 2011. Based on the information provided, there is no potential for impact to the Site.
    - A property located at 185 West John Street, recorded as "Behind Post Office" in the database listing, and at a higher elevation than the Site Is listed with a spill of approximately 1 gallon of hydraulic oil that occurred due to equipment failure on June 29, 2016. The NYSDEC was informed and Spill Number 1603109 was assigned to this facility. Corrective action was taken, and on 07/18/2016, the case was closed. Based on the information provided, there is no potential for impact from the NY SPILLS facility to the Site.

- Pappas Residence is located at 186 West John Street at a higher elevation than the Site. On October 19, 1999, a #2 fuel oil spill occurred due to an equipment failure. The NYSDEC was notified and Spill No. 9908785 was assigned to this facility. The spill was closed on May 25, 2005. Based on the information provided, there is no potential for impact from the NY SPILLS facility to the Site.
- Child Safe Products is located at 112 Duffy Avenue at a lower elevation than the Site. Three separate spills occurred at this facility at different times. (1) On March 27, 1995, a 5-gallon petroleum spill occurred during housekeeping activities by Child Safe Products. The NYSDEC was notified and Spill No. 9416739 was assigned to the case. Corrective action was taken, and 12/3/1998, the Spill case was closed. (2) According to the EDR database, on June 20, 1997, a petroleum spill occurred by William F Donlon. The NYSDEC was notified and Spill No. 253594 was assigned to the case. Corrective action was taken and the spill case was closed on 11/16/1998. (3) According to the EDR database, on May 7, 2010, a paint thinners spill occurred by C&R Auto Body. The NYSDEC was notified and the Spill No. 1001480 was assigned to this case. Corrective actions were taken and on 12/17/2010, the spill case was closed. Based on the information provided and the lower elevation of the Site, there is limited potential for impact to the Site from this NY Spills facility.
- There were four spills that occurred at sites with a lower elevation and therefore there is limited potential for impact to the Site. The NY SPILLS database was last updated on November 25, 2013 (EDR Inc., 2017).

Other Ascertainable Records

17. Resource Conservation and Recovery Act Non-Generator (RCRA NON-GEN/NLR): EPAs comprehensive information system, providing access to data supporting the RCRA of 1976 and the HSWA of 1984. The database includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by the RCRA. Non-Generators do not presently generate hazardous waste.

    The Site was not identified as a RCRA NON-GEN/NLR facility. Two RCRA NON-GEN/NLR facilities were identified within ⅛-mile radius of the Site. The Hicksville Post Office is located at 185 W. John Street, directly north of the Site across W. John Street at a higher elevation than the Site. This facility is identified as handling ignitable waste (D001) and corrosive waste (D002). In addition, this facility is a historical generator for D001 and D002 wastes from 1997 to 2007. Based on the information provided, distance and higher elevation to the Site, there is potential for impact to the Site from this RCRA NON-GEN/NLR facility should a spill have occurred. Based on its proximity to the Site and listings on multiple databases, this facility is considered an other finding as defined by Matrix. Kuno Steel Products Co Inc is located at 132 Duffy Avenue at a lower elevation than the Site. This facility is a historical generator of F017 from 1980 to 2006. No violations were identified with this historical generator. Based on the information provided, distance and lower elevation to the Site, there is little potential for impact to the Site from this RCRA NON_GEN/NLR facility. Eleven RCRA NON-GEN/NLR facilities were identified within ⅛-mile and ¼-mile of the Site as a RCRA NON-GEN /NLR facility. Based on the information provided and the distance of the facility to the Site, there is no potential for impact from this RCRA NON-GEN/NLR facility to the Site. This RCRA NON-GEN/NLR database was last updated on December 12, 2016 (EDR Inc., 2017).

18. Record of Decision (ROD): ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

    The Site is not identified as a ROD facility. No ROD facilities were identified within ½-mile radius of the Site. One ROD facility was identified between ½-mile and 1-mile radius of the Site. Based on the information provided and the distance of the facility to the Site, there is no potential for impact from this ROD facility to the Site. This ROD database was last updated on November 25, 2013 (EDR Inc., 2017).

19. CONSENT: Major legal settlements that establish responsibility and standards for cleanup at NPL (superfund) sites. Released periodically by U.S. District Courts after settlement by parties to litigation matters.

    The Site is not identified as a CONSENT facility. No CONSENT facilities were identified within ½-mile radius of the Site. Two CONSENT facilities were identified between ½-mile and 1-mile radius of the Site. Based on the information provided and the distance of the facility to the Site, there is no potential for impact from this CONSENT facility to the Site. This CONSENT database was last updated on January 30, 2017 (EDR Inc., 2017).

20. New York Manifest (NY MANIFEST): Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

    The Site is not identified as a NY MANIFEST facility. Three NY MANFIEST facilities were identified within ⅛-mile radius of the Site. Saturn of Hicksville is located at 125 W John Street at a higher elevation than the Site. The facility is identified as shipping manifested waste for waste codes D001 from 1999 to 2008 as well as D039 in 2008. Based on the elevation relative to the Site, there is potential for impact to the target property should a spill occur from the NY MANIFEST facility. Based on its proximity to the Site and listings on multiple databases, this facility is considered an other finding as defined by Matrix.

    The Hicksville Post Office is located at 185 W. John Street at a higher elevation than the Site. The facility is identified as shipping manifested waste for waste codes D002 and D001 in 1997. Based on its proximity to the Site and listings on multiple databases, this facility is considered an other finding as defined by Matrix. AAAA-1 Auto Body is located at 112 Duffy Avenue at a lower elevation than the Site. This facility is identified as shipping manifested waste for waste codes F003, F005, D001, D018, and D035 from 2014 to 2016. Based on the distance and elevation from the facility to the Site, there is no potential for impact from the NY MANIFEST facility to the Site. Ten NY MANIFEST facilities were identified between a ⅛-mile and ¼-mile radius of the Site. Based on the distance from the facilities to the Site, there is no potential for impact from the NY MANIFEST facilities to the Site. This NY MANIFEST database was last updated on January 30, 2017 (EDR Inc., 2017).

21. New Jersey Manifest (NJ MANIFEST): Hazardous waste manifest information.

    The Site is not identified as a NJ MANIFEST facility. One NJ MANIFEST facility was identified within ⅛-mile radius of the Site. United States Postal Service is identified as a NJ MANIFEST facility. It is located at 185 W. John Street is at a higher elevation than the Site. This facility is identified as shipping manifested waste for waste codes D001, D002, and D033 in 2012. Based on the elevation and distance of the facility to the Site, there is limited potential for impact from the NJ MANIFEST facility to the Site. No NJ MANIFEST facilities were identified between a ⅛-mile and ¼-mile radius of the Site. This NJ MANIFEST database was last updated on December 31, 2015 (EDR Inc., 2017).

EDR Recovered Government Archives

22. EDR Historical Auto (EDR HIST AUTO): EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of source that might in EDR's opinion, include gas station/filling station /service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDRs HRHR effort presents unique and sometimes proprietary data

about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

The Site is not identified as an EDR HIST AUTO facility. One EDR HIST AUTO facility was identified within ⅛-mile radius of the Site. This property, Long Island UK Auto, is located at 125 W John Street, referenced in other databases as Saturn of Hicksville, at a higher elevation than the Site. The historical auto station was open in 2008. No additional information was provided. Based on the distance of the EDR HIST AUTO facility and the information provided, there is limited potential for impact to the Site from this facility. This facility was noted in Section 4.5.2 as a vapor concern as spills on this property could potentially cause a VEC, due to its proximity. The EDR HIST AUTO facility was last updated on February 20, 2007 (EDR Inc., 2017).

23. EDR Historical Cleaners: EDR HIST CLEANER: EDR has searched national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records," or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

    The Site is not identified as a EDR HIST CLEANERS facility. One EDR HIST CLEANER facility was identified within ⅛-mile radius of the Site. This unknown property is located at 124 Duffy Avenue at a lower elevation than the Site. The EDR HIST CLEANERS facility was called ISS Cleaning Service Group and open in 2012 at 124 Duffy Avenue. No additional information was provided. Based on the distance of the EDR HIST CLEANERS facility, and the information provided, there is no potential for impact to the Site from this facility. The EDR HIST CLEANERS facility was last updated on February 20, 2007 (EDR Inc., 2017).

4.2 Additional Environmental Record Sources

Matrix contacted the USEPA, NYSDEC, Nassau County Clerk, Nassau County Fire Department and the Oyster Bay Municipal Clerk regarding environmental files for the Site. Copies of FOIL requests and responses are provided in Appendix C.

Responses from all the agencies requested have not been received at this time. Nassau County Clerks, NYSDEC, and the USEPA were the only agency to respond at this time The Nassau County Clerk and the NYSDEC was unable to complete this request with an unknown mailing address. Nassau County Clerk's Office denied Matrix's FOIL request. No findings were observed in the USEPA's FOIL request.

4.3 Historical Use Information on the Property and Surrounding Properties

4.3.1 Sanborn Maps

A search was made through EDR for historical Sanborn Fire Insurance (Sanborn) maps for the Site and surrounding properties. Fire insurance maps were initially produced by private companies for the insurance industry to provide information on fire risks to buildings and other structures. Fire insurance maps serve as an

historical resource for evaluating the potential for site contamination based on history of past use. Sanborn maps were reviewed for the years 1925, 1947, and 1968. However, the Site is only identified on the 1968 Sanborn. A copy of the Sanborn Map Report is included in Appendix D.

1925 Sanborn Fire Insurance Map (1" =600')

The Site is not illustrated on this map. To the north of the Site are multiple dwellings and automobile-designated structures. To the southeast of the Site is the W. Baunman Braid Factory, and to the southwest of the Site are multiple dwellings. The LIRR is immediately south of the Site.

1947 Sanborn Fire Insurance Map (1" = 600')

The Site is not illustrated on this map. The aforementioned W. Baunman Braid Factory is now identified as Keystone Glass Manufacturing Company. No other changes have been identified since the 1925 Sanborn Fire Insurance Map.

1968 Sanborn Fire Insurance Map (1" = 600')

The Site has a one-story rectangular building on it that is used for truck and machinery storage called Karlson & Reed, Inc., Contractors. The address is labeled as 105 West Barclay Street. The building is located on the eastern portion of the Site. The remainder of the Site is vacant, likely utilized for parking. North of the Site is West Barclay Street. Immediately northeast of that is a U-Shaped Truck and Machinery Storage building on it. Additional dwellings and office buildings were constructed to the north of the Site as well. Northwest of the site is a one-story truck repository that has a paint room attached to it. Immediately south of the Site is the LIRR tracks. Further south/southeast of the LIRR tracks are motor freight buildings and fueling stations, part of which used to be Keystone Glass Manufacturing Company. A fuel oil tank is located at 116 Duffy Avenue at the Consumer Service Fuel Oil & Kerosene facility. A second fuel oil tank is located southwest of the Site and LIRR tracks. Directly adjacent to the west of the Site is a parking lot. Directly adjacent to the east is a property with an office building. Further east of that is a Pabst Brewing Company that consists of two buildings, a garage attached to another building used for beverage and beer depot.

4.3.2 Aerial Photographs

An inquiry was made with EDR to obtain historical aerial photographs for the Site. Aerial photographs were reviewed for the years 1938, 1947, 1953, 1957, 1962, 1966, 1970, 1974, 1980, 1985, 1994, 2006, 2009, and 2011. These photographs were used to determine past land usage and major improvement to the Site and surrounding area. Copies of EDR aerial photographs are included in Appendix E.

1938 Aerial Photograph (1" = 500')

The 1938 aerial photograph indicates that the western portion of the Site is cleared and may be used for farm land. The eastern portion of the site is improved with a rectangular building on it. There is a dirt road bordering the building on the property. West Barclay Avenue and Marion Place have been constructed bordering the north side of the Site, The LIRR tracks are present bordering the southern Site boundary, railroad siding was present southeast towards the property adjacent to the east, farmland and residential houses were constructed west and east of the Site. The surrounding area indicates a mixture of residential areas and farmland in all directions.

1947 Aerial Photograph (1" = 500')

The 1947 aerial photograph indicates that no significant changes have occurred to the Site since the 1938 aerial. A U-shaped building was constructed on the northeastern adjacent property (on West John Street). Train cars and freight cars were stored south of the Site (north of the railroad tracks on a rail siding). No changes have occurred to the western-adjacent properties. Additional train and freight cars were stored immediately east of the Site. The pathway on the property is no longer present. Additional residential structures have been developed northwest of the Site past West John Street. No additional significant changes have occurred since the 1938 aerial photograph.

1953 Aerial Photograph (1" = 500')

The 1953 aerial photograph indicates that no significant changes have occurred to the Site since the 1947 aerial photograph. Residential homes continue to be constructed north and west of the Site. Commercial/industrial buildings have been constructed immediately south of the railroad tracks. No additional significant changes have occurred in the surrounding areas since the 1947 aerial photograph.

1957 Aerial Photograph (1" = 500')

The 1957 aerial photograph indicates that some of the western portion of the site has been asphalt paved and is used as parking. No additional significant changes have occurred to the Site since the 1953 aerial photograph. Southwest of the Site, beyond the LIRR, a cylindrical structure has been developed, possibly a water tower or AST. No additional significant changes have occurred in the surrounding areas since the 1953 aerial photograph.

1962 Aerial Photograph (1" = 500')

The 1962 aerial photograph indicates that the Site was a storage yard with what appear to be cars or train parts stored on it. No additional significant changes have occurred to the Site. No additional changes have occurred to the surrounding area since the 1957 aerial photograph.

1966 Aerial Photograph (1" = 500')

The 1966 aerial photograph indicates no significant changes have occurred to the Site. A P shaped dirt road was constructed in the northern property. A large building was constructed on the property between West Barclay Street and Marion Place. The two rectangle buildings that were located south of West John, adjacent to the west of the Site were demolished. Further west of the Site (approximately 540 ft.) a large rectangle building was constructed. This building is located East of Holman Boulevard, and south of West John Street. The small buildings that were previously on that property were demolished. No additional changes have occurred to the surrounding area since the 1962 aerial photograph.

1970 Aerial Photograph (1" = 500')

The 1970 aerial photograph indicates that there are two trailers located on Site. No other significant changes have occurred to the Site. North of the site, an additional dirt patch has been constructed to the immediate west of the P-shaped dirt road. Three buildings were demolished on Duffy Avenue located directly south of the site and the railroad tracks. The previous buildings on this property have been demolished. Another large building was constructed on the former farm property to the west of the Site between Holman Boulevard and West Barclay Street To the east of the site. No additional changes have occurred to the surrounding area since the 1966 aerial photograph.

1974 Aerial Photograph (1" = 500')

The 1974 aerial photograph indicates that a possible debris pile or some other soil disturbance is located in the center of the Site. No other significant changes have occurred to the Site since the 1970 aerial photograph. The two large transformers currently located at the adjacent property immediately southwest of the Site are visible in the photograph. A building was constructed on the vacant property located on Duffy Avenue, south of the Site and the railroad tracks. No additional significant changes have occurred to the surrounding properties since the 1970 aerial photograph.

1980 Aerial Photograph (1" = 500')

The 1980 aerial photograph indicates that the building on-Site has been demolished and there are some other visible land disturbances. No additional changes have occurred to the Site. The U-shaped building adjacent to the north of the Site has been demolished. A small square shaped building has been developed adjacent to the east of the Site. No additional changes have occurred to the surrounding area since the 1974 aerial photograph.

1985 Aerial Photograph (1" = 500')

The 1985 aerial photograph indicates that the Site has been asphalt paved with several cars parked there. No additional changes have occurred to the Site, south of the railroad tracks, On Duffy Street, two large rectangle buildings have been constructed (west of Route 106). To the east of the Site (approximately 3 properties east), along the north side of the railroad tracks, the buildings that were present in the 1980 aerial, have been demolished, paved over, and used as a parking lot. No additional changes have occurred to the adjacent properties and the surrounding area since the 1980 aerial photograph.

1994 Aerial Photograph (1" = 500')

The 1994 aerial photograph indicates that the Site is being used as an active parking lot. The parking lot located northwest of the Site is being used. No significant changes have occurred to the Site or the surrounding areas since the 1985 aerial photograph.

2006 Aerial Photograph (1" = 500')

The 2006 aerial photograph indicates no significant changes have occurred to the Site since the 1994 aerial photograph. Northwest of the Site, along the northern side of West John Street a building was constructed. No additional changes have occurred to the surrounding area since the 1994 aerial photograph.

2009 Aerial Photograph (1" = 500')

The 2009 aerial photograph indicates no significant changes have occurred to the Site since the 2006 aerial photograph. No changes have occurred to the surrounding area since the 2006 aerial photograph.

2011 Aerial Photograph (1" = 500')

The 2011 aerial photograph indicates no significant changes have occurred to the Site since the 2009 aerial photograph. No changes have occurred to the surrounding area since the 2009 aerial photograph.

4.3.3 Historical Topographic Maps

An inquiry was made with EDR to obtain historical USGS topographic maps for the Site. Historical topographic maps were reviewed for the following quadrants and years: Hempstead and Oyster Bay, New York 1897, 1898 1899/1900; Hicksville and Freeport, New York 1947, 1954/1955, 1967/1969, 1979, 2013. No significant changes in elevation were noted. Copies of the historical topographic maps can be found in Appendix F.

1897 Hempstead and Oyster Bay Quadrant Topographic Map (1:62,500)

Based on a review of the 1888 Oyster Bay quadrant topographic map, the Site appears to be unoccupied. Roads are developed surrounding the Site. The Long Island Railroad has also been developed to the south of the Site. The land immediately surrounding the Site appears to be undeveloped with noted changes in elevation.

1898 Hempstead and Oyster Bay Quadrant Topographic Map (1:62,500)

Based on a review of 1898 Oyster Bay quadrant topographic map, no significant changes in development or elevation have occurred to the Site or the surrounding area since the 1897 Oyster Bay quadrant topographic map.

1899/1900 Hempstead and Oyster Bay Quadrant Topographic Map (1:62,400)

Based on a review of the 1899/1900 Oyster Bay quadrant topographic map, no significant changes in development or elevation have occurred to the Site or the surrounding area since the 1893 Oyster Bay quadrant topographic map.

1947 Hicksville and Freeport Quadrant Topographic Map (1:24,000)

The 1947 Hicksville and Freeport quadrant topographic map shows a large t-shaped building occupying most of the eastern portion of the Site. No other significant changes in development or elevation have occurred to the Site. Railroad siding was constructed to the south/southwest of the Site. Additional roads including James Street, Maple Place, Wyckoff Street, and Sackett Street were developed to the north of the Site. While the topographic lines shifted in this map (intervals of 20 feet-amsl are shown as well as dashed lines representing the 1899/1900 topographic map), the Site is still shown at the same elevation of 140 amsl.

1954/1955 Hicksville and Freeport Quadrant Topographic Map (1:24,000)

A review of the 1954/1955 Hicksville quadrant topographic map indicates a change in cartographer style in that the prior buildings observed on the 1947 map (including the building on-Site) are not shown, but they appear again in later maps. In addition, more streets and neighborhoods have been construed all around the Site. To the south and west of the Site, surface water bodies have been identified. No other significant changes in development or elevation have occurred to the Site and surrounding area since the 1947 Hicksville quadrant topographic map.

1967/1969 Hicksville and Freeport Quadrant Topographic Map (1:24,000)

Based on a review of the 1967/1969 Hicksville quadrant topographic map, a building was constructed on the eastern portion of the Site. No other significant changes in development or elevation have occurred to the Site since the 1954/1955 Hicksville quadrant topographic map. Buildings have been constructed to the adjacent properties to the south, east and west of the Site. Cantiague Park was constructed to the northwest direction of the

Site. Additional surface water bodies have been identified to in all directions from the Site. The closest surface water body is located approximately 1650 ft. north of the Site by Burns Avenue School. Further north, the Long Island Expressway was constructed. In addition, more streets were constructed in all directions around the Site.

1979 Hicksville and Freeport Quadrant Topographic Map (1:24,000)

Based on a review of the 1979 Hicksville quadrant topographic map, no significant changes in development or elevation have occurred to the Site since the 1967/1969 Hicksville quadrant topographic map. Newbridge Road (Route 106) has been constructed to the south of the Site, connecting to Route 106 to Route 107 (Broadway Road). Several buildings have been constructed to west of the Site. Several disturbed areas are noted to the southwest of the Site.

2013 Hicksville and Freeport Quadrant Topographic Map (1:24,000)

Based on a review of the 2013 Hicksville quadrant topographic map, no significant changes in development or elevation have occurred to the Site or surrounding area since the 1979 Hicksville quadrant topographic map, although buildings are not depicted on this topographic map.

4.3.4 City Directory

City directories serve as a historical resource by listing the name of a resident or the name and type of a business at a particular address. A search was made by EDR for historical city directories of the Site and immediately adjacent properties. As a result of the search, the city directories were reviewed for the years 1973, 1978, 1983, 1988, 1992, 1995, 1999, 2003, 2008, and 2013. Sources of the reviewed city directories include Cole Information Services. A copy of the City Directory Abstract Report is included in Appendix G.

A specific address was not provided for this Site location. Therefore, a public database was used to determine an address. The potential address for this Site is 110-132 West Barclay Street. Based on a review of the City Directory Abstract, the Site was not identified.

Based on the proximity to the Site, adjacent streets that were further researched in the city directory include neighboring properties located along West Barclay Street. The properties are identified as commercial and residential as described below:

4.4 Tier 1 Vapor Encroachment Screening

Matrix conducted a VES in general accordance with the ASTM Designation E2600-15 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*.

The objective of the VES is to conduct an initial screening to determine whether current or historical practices associated with the Site or nearby properties have the potential to have created a Vapor Encroachment Condition (VEC). The term VEC is defined by ASTM Standard 2600-15 "as the presence or likely presence of chemicals of concern (COC) vapors in the subsurface of the Site caused by the release of vapors from contaminated soil and/or groundwater on or near the Site as identified by Tier 1 or Tier 2 procedures."

The Tier 1 screening process includes the following: (1) a search distance test to determine if there are known or suspect contaminated properties in the AOC; and (2) a COC test to determine for those known or suspect contaminated properties within the AOC whether or not a COC is likely to be present.

Matrix reviewed standard environmental record sources typically collected as part of the ASTM E1527-13 Phase I to determine if there are known or suspected sources of contamination within the AOC. The AOC is determined utilizing the approximate minimum search distances as defined by ASTM E2600-15. The approximate minimum search distance is based upon the type of COC; petroleum hydrocarbons or non-petroleum hydrocarbons. Generally, the approximate minimum search distance with regards to the AOC is one-third mile for non-petroleum hydrocarbons and one-tenth mile for petroleum hydrocarbons.

There are four possible conclusions of the Tier 1 screening process which include: (1) a VEC exists; (2) a VEC likely exists; (3) a VEC cannot be ruled out; or (4) a VEC can be ruled out because a VEC does not or is not likely to exist. If a VEC does not exist or is unlikely to exist, then the VES process is considered complete in general accordance with ASTM E2600-15. If a VEC cannot be ruled out in the Tier 1 screen, then further action may be recommended (i.e., Tier 2). A Tier 2 screening is excluded from the scope of the Tier 1 process.

4.4.1 Standard Environmental Record Sources

A VES was completed for the Site and surrounding area through a search by EDR dated March 9, 2017. The VES utilizes standard environmental record sources to determine if there are known or suspected sources of contamination within the AOC. The search was conducted in general accordance with ASTM E 2600-13 standards.

Based on the findings of the VES Worksheet, a VEC cannot be ruled out due to the following facility:

- 125 West John Street is located at 125 West John Street, at a higher elevation than the Site approximately 0.100 miles away. The facility is listed under the EDR HIST AUTO database. In 2008 the property used to be Long Island UK Auto. No additional information is provided.

  A copy of the Vapor Encroachment Screen is included in Appendix H.

4.5 USER PROVIDED INFORMATION

4.5.1 Title Records

Chain-of-Title records were not provided for review by Matrix. Based on information obtained from http://lrv.nassaucounty.gov, West Barclay Street (Section 11; Block G, Lot 227, 231, and 232) is owned by the Town of Oyster Bay. No other chain-of-title records were made available by the User.

4.5.2 Environmental Liens or Activity and Use Limitations

No records regarding environmental liens or activity and use limitations were provided by the User for Matrix to review.

4.5.3 Specialized Knowledge

Specialized knowledge of RECs or potential RECs in connection with the Site has been included in Section 5.

4.5.4 Commonly Known or Reasonably Ascertainable Information

Commonly known or reasonably ascertainable information has been provided in Section 10.

4.5.5 Valuation Reduction for Environmental Issues

No information regarding the valuation reduction for environmental issues was provided by the owner.

4.5.6 Owner, Property Manager, and Occupant Information

The Site is currently owned by Town of Oyster Bay, based on information provided the Site consists of an asphalt paved parking lot that is used for municipal parking.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

A reconnaissance of the Site and surrounding area was performed on March 16, 2017, by Jordan Farber of Matrix. No Site personnel were present during the site reconnaissance. All exterior areas of the property were inspected during the Site reconnaissance. There are no structures on-Site. During the site reconnaissance, snow covered the property and cars were parked in almost all parking spaces within the Site, so these are noted as limitations in performing a full inspection. Photographs of significant features identified during the Site reconnaissance are included in Appendix B.

5.2 General Site Setting

The Site is located on West Barclay Street, on tax map Section 11, Block G, Lot 227, 231, and 232 in Hicksville, Town of Oyster Bay, Nassau County, New York. The Site consists of three parcels which is asphalt paved and used as one parking lot.

5.3 Exterior Observations

5.3.1 Hazardous Substances/Wastes

No evidence of hazardous substances/wastes and petroleum products was observed during the Site reconnaissance.

5.3.2 Bulk Storage Tanks and Appurtenances

Aboveground Tanks and Associated Piping

No evidence of ASTs or associated piping was observed on exterior portions of the Site during the Site reconnaissance.

Underground Tanks and Associated Piping

No evidence of USTs or associated piping was observed on exterior portions of the Site during the Site reconnaissance.

Storage Pads and Areas Including Drum/Waste Storage

No evidence of storage pads and areas including drum/waste storage was observed on exterior portions of the Site during the Site reconnaissance.

Rail, Truck, or Other Loading and Unloading Areas

No evidence of rail, truck, or other loading and unloading areas was observed on exterior portions of the Site during the Site reconnaissance.

Pump Stations, Sumps, and Pits

No pump stations, sumps, or pits were observed on exterior portions of the Site during the Site reconnaissance.

Surface Lagoons and Impoundments

No surface lagoons or impoundments were observed on exterior portions of the Site during the Site reconnaissance.

5.3.3 Drainage Systems and Areas

Surface Water Bodies

No surface water bodies were observed on exterior portions of the Site during the Site reconnaissance.

Sanitary/Storm Sewer Collection Systems

A sanitary/storm sewer collection system was observed on Site during the Site reconnaissance. No evidence of staining or a release was identified in the vicinity of the sewer grates. Several storm water collection sewer grates were observed throughout the street surrounding the Site.

Septic Systems and Leach Fields

No septic systems or leach fields were observed on exterior portions of the Site during the Site reconnaissance.

Seepage Pits and Dry Wells

No seepage pits or dry wells were observed on exterior portions of the Site during the Site reconnaissance.

Storm Water Detention Ponds and Fire Water Ponds

No storm water detention ponds or fire water ponds were observed on exterior portions of the Site during the Site reconnaissance.

Drainage Swales and Culverts

Storm water drain system was observed in the southern portion of the Site during the Site. No evidence of staining or a release was identified in the vicinity of the storm water collection sewer grates. No drainage swales or culverts were observed on exterior portions of the Site during the Site reconnaissance.

5.3.4 Discharge and Disposal Areas

Solid Waste Generation/Disposal and Dumpsters

No evidence of solid waste generation/disposal and dumpsters was observed during the Site reconnaissance.

Sanitary/Process Waste Generation/Discharge Points

No evidence of sanitary/process waste generation or discharge points was observed on exterior portions of the Site during the Site reconnaissance.

Underground Piping, Including Industrial Process Sewers

No evidence of underground piping, including industrial process sewers was observed on exterior portions of the Site during the Site reconnaissance.

Waste Piles

No evidence of waste piles was observed on exterior portions of the Site during the Site reconnaissance.

Landfills or Landfarms

Based on a review of the State's Solid Waste Facility Directory and the Site reconnaissance, no landfills or landfarms are located in close proximity to the Site.

Open Pipe Discharges

No open pipe discharges were observed on exterior portions of the Site during the Site reconnaissance.

5.3.5 Transformers

Based on the Site reconnaissance, there was a pole mounted transformers on West Barclay Street to the north of the Site. PCB content was not indicated in the vicinity of or on the transformers, however, there is no evidence or record of discharges from the transformers.

During the Site reconnaissance, an LIRR transformer yard (Substation G-20) was observed immediately adjacent to the southwestern corner of the Site. The transformers are located on concrete pads that are in good condition. PCB content was not indicated on the exterior of the transformers, however, there is no evidence or record of discharges from the transformers.

Adjacent to the east of the Site is the Hicksville Water Department's building. A concrete mounted transformer was observed. The transformers are located on concrete pads that are in good condition. PCB content was not

indicated on the exterior of the transformers, however, there is no evidence or record of discharges from the transformers.

Matrix contacted LIPA, the owner of the transformers, regarding the contents of the transformers and received the following response:

"No analytical data is available for these transformers. However, all distribution transformers owned by LIPA were specified at the time of purchase from the manufacturer to contain a dielectric fluid consisting of mineral oil, not PCBs. As a result, LIPA's in-service transformers typically are expected to either contain no detectable PCBs or low levels of PCBs (typically <0.01%). Even though mineral oil was specified, low levels of PCBs could nonetheless be present because manufacturers sometimes manufactured mineral oil transformers in close proximity to transformers manufactured to specifically contain PCBs. LIPA does not routinely conduct sampling and analysis of transformers for PCBs as that would require the incurrence of an outage and costs that would have to be passed on to the customer. Instead, units are tested when they retired from active service."

5.4 Interior Observations

As stated above, there were no areas located on Site.

6.0 INTERVIEWS

6.1 Interview with Owner

No facility or additional personnel were present on the Site during the Site reconnaissance. A user questionnaire was provided to the Jamie Van Dyke, a Site representative. Matrix is waiting for the return of the questionnaire. A copy of the completed Prospective Landowner and/or User Questionnaire will be included in Appendix J.

6.2 Interview with Site Manager

No additional personnel were present during the Site reconnaissance; therefore, no interview was conducted with the Site Manager.

6.3 Interview with Occupants

The Site does not consist of any occupant.

6.4 Interview with Local Government Officials

As indicated above (Section 5.2), Matrix contacted the USEPA, NYDEC, Nassau County Clerk and Fire Department, and the Oyster Bay Township Municipal Clerk regarding environmental files for the Site. Information request letters and responses associated with these agencies are included in Appendix C.

6.5 Interview with Others

A Prospective Landowner and/or User Questionnaire was provided to the client for completion. Responses provided on the Prospective Landowner and/or User Questionnaire have been included throughout this report. A copy of the Prospective Landowner and/or User Questionnaire has not been received yet. When Matrix receives it, the document will be provided in Appendix J.

7.0 FINDINGS & OPINIONS

Based on the site reconnaissance, database review, historical review, review of available records, and interviews with persons familiar with the Site and surrounding area, Matrix is providing findings and opinions including RECs, historical recognized environmental conditions (HRECs), *de minimis* conditions, and data gaps.

Recognized Environmental Conditions

This assessment has revealed the following three RECs in connection with the Site:

- Former industrial use of the property for truck and machinery storage under the name Karlson & Reed, Inc. Contractors from sometime prior to 1947 to at least 1978. This usage potentially entailed the storage and usage of petroleum products and solvents for maintenance activities.
- Vapor Encroachment Condition (VEC): A Tier 1 Vapor Encroachment Screen (VES) was completed by Matrix using EDR's Vapor Encroachment Screen Worksheet. Based on available information, a potential VEC was identified at the Site due to the presence of Long Island UK Auto, located at 125 W John Street, referenced in other databases as Saturn of Hicksville, at a higher elevation than the Site. This facility was listed as a historical auto station and was open in 2008. Currently this facility is occupied by a Hertz Sales Office. The former occupant, Saturn of Hicksville, is found on the RCRA CESQG, NY MANIFEST, NY AST, ECHO, FINDS and NYUST databases. Spills on this property could potentially cause a VEC, due to its proximity.

A Recognized Environmental Conditions map is presented as Figure 5.

Controlled RECs

No CRECs have been identified for the Site.

Historical RECs

No HRECs were identified for the Site.

De Minimis Conditions

No *de minimis* conditions were observed or identified through interviews or records review of current or historical uses of the Site and adjoining properties.

Other Findings

The term "other finding" is not defined by ASTM; rather, Matrix uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard. Although not a considered REC based on currently available information, Matrix identified the following other findings based on review of the database reports or the Site reconnaissance. Sites within 0.1 miles of the Site and at a higher elevation that were determined to have the potential to impact the Site should a spill have occurred were deemed other findings.

- The LIRR tracks are located immediately south of the Site. Typical contaminants associated with rail use include creosote and arsenic (used for treating railroad ties); herbicides (to limit vegetation growth); pesticides; solvents, diesel and other petroleum products associated with cargo loading and unloading, train car maintenance, fueling, etc.; polycyclic aromatic hydrocarbons (PAHs), which are constituents of partially combusted coal or petroleum-derived products, such as coal ash and fuel oil and, along with metals, are commonly found in urban fill material, likely used during track and station construction. These constituents in urban fill typically have low mobility.
- The property to the north-northwest (presumed upgradient and at a higher elevation) of the Site, directly across W. John Street, currently is the Hicksville Post Office, located at 185 W. John Street, has an active UST that was installed in February 1991.There are no known violations for this UST or the facility, which is also listed on the RCRA NONGEN/NLR, NY SPILLS database (two closed spills) and MANIFEST databases. Spills on this property could potentially impact the Site, due to its proximity.

Data Gaps

- To date, responses to most FOIL requests submitted have not been received. All responses will be forwarded upon receipt with recommendations, if necessary.
- No exact address was given to Matrix from the client and so publicly available mapping services were used to determine the address. The potential addresses for this Site are 110-132 West Barclay Street.
- The entirety of the Site was inspected during Matrix's walkthrough, though most of the Site was covered by parked cars and snow, limiting a complete inspection.
- The 1925 and 1947 Sanborn Maps are missing visual information for the Site and surrounding area. A limitation was encountered in determining the historical use of the subject property. The earliest source of historical information reasonably ascertainable within the time frame of this report in which usage could be determined was an aerial photograph from 1938. At the time of the photograph, a portion of the Site appeared to be agricultural field crop land (a developed use per the ASTM Standard). Therefore, the ASTM E1527 requirement to determine all obvious uses of the property from the present back to the property's first obvious developed use, or back to 1940, whichever is earlier, could not be achieved.

However, based upon the identified agricultural land use, it is unlikely that there had been significant prior development; therefore, this data failure is not expected to impact the results of this assessment.

8.0 DEVIATIONS

The Phase I ESA was performed in general accordance with the ASTM 1527-13 Standards as well as the detailed scope of services presented in Section 2.2 of this report.

9.0 ADDITIONAL SERVICES

No additional services were performed beyond the detailed scope presented in Section 2.2 of this report.

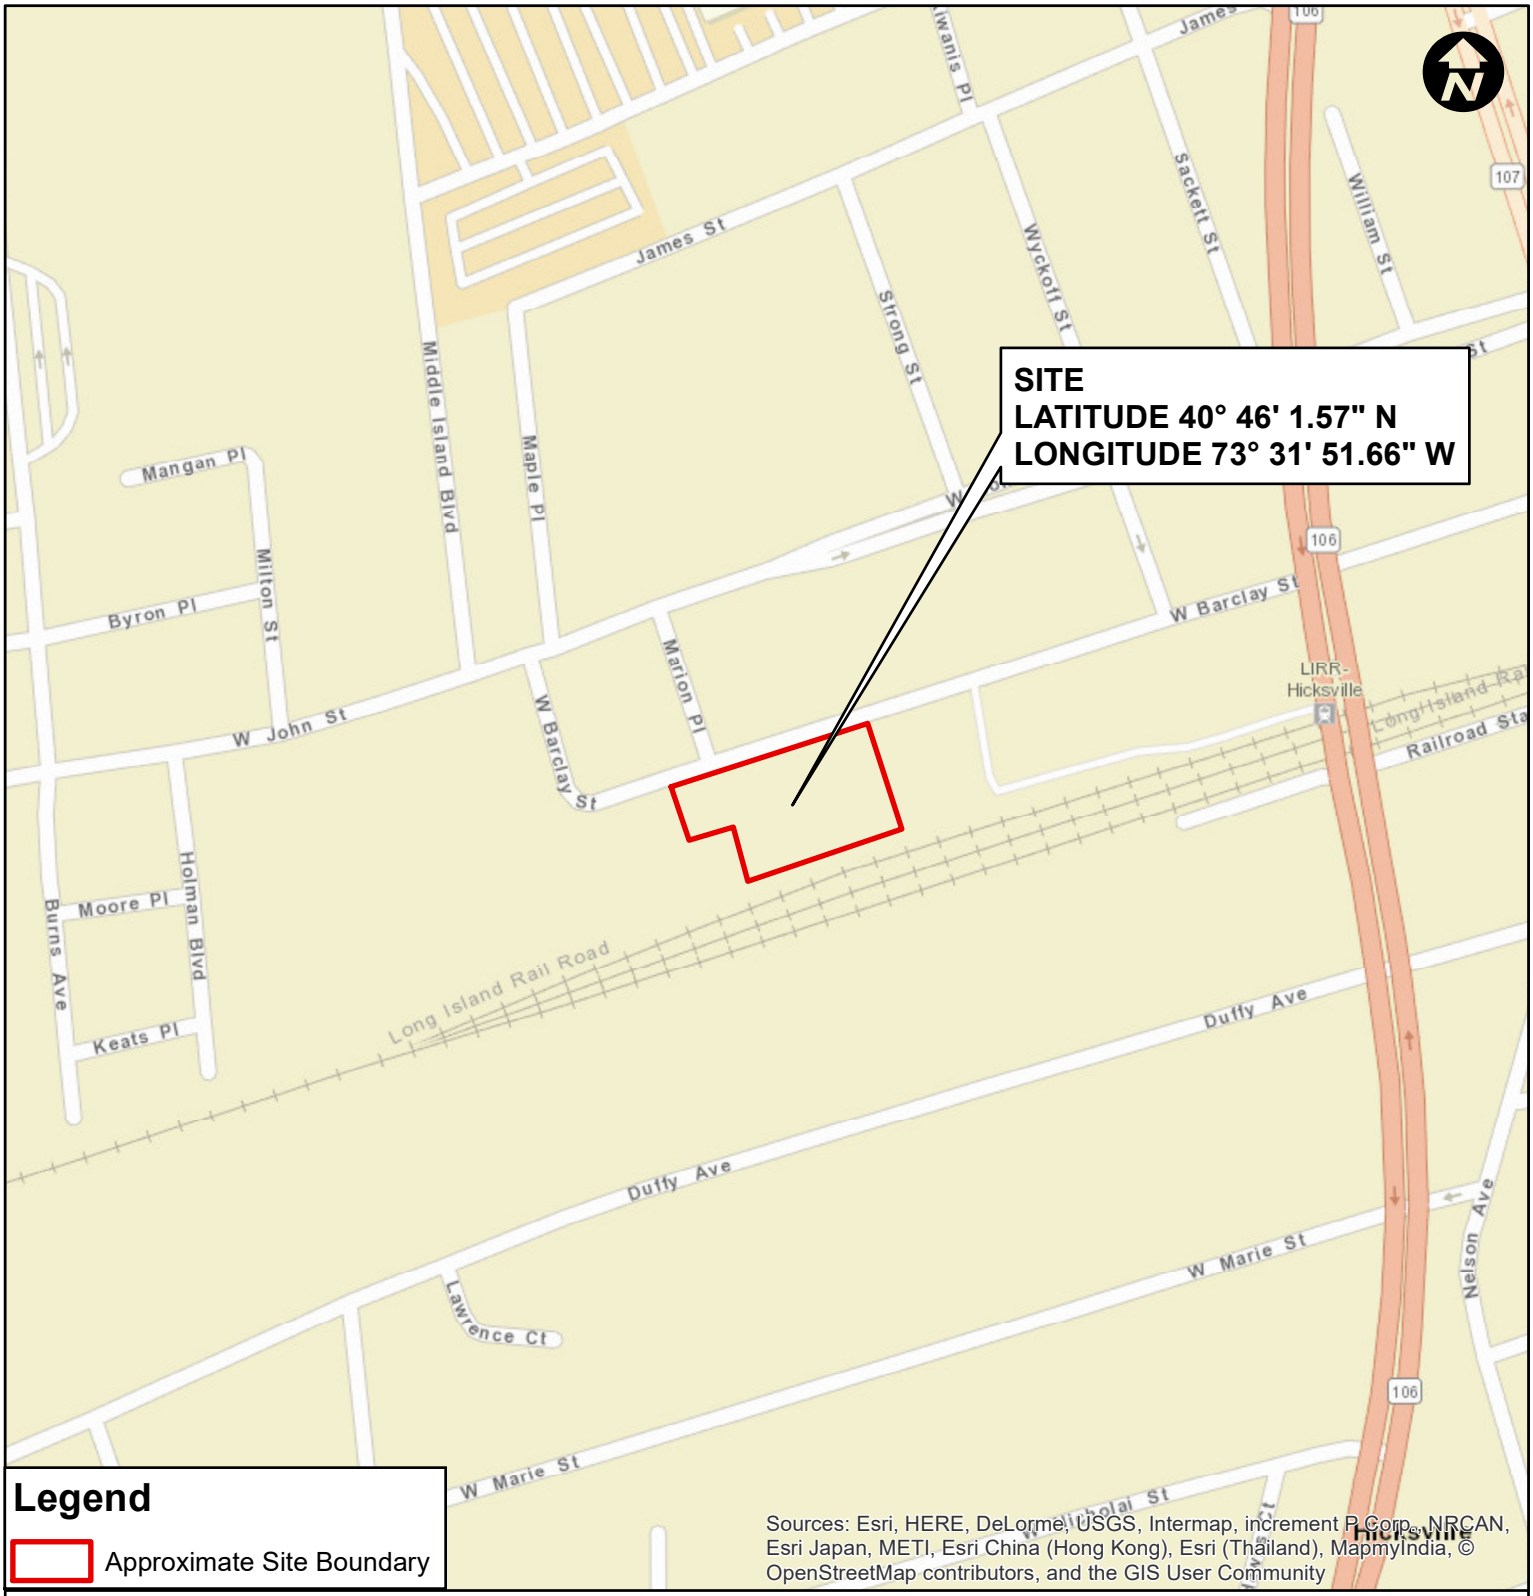
11.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Matrix declares, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and preformed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Samantha Adler
Environmental Scientist

Brian Crespi
Project Manager

Mindy Chassin Horowitz
Program Director



12.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

SAMANTHA ADLER
Environmental Scientist
Ms. Adler has over three years of experience in environmental investigations including environmental oversight, environmental assessment, and remediation projects under NJDEP and NYSDEC jurisdiction for commercial/industrial facilities. Ms. Adler's experience includes but is not limited to, oversight of temporary and monitoring well installations, soil borings and soil classification, groundwater, surface water, soil gas, and sediment sampling, processing of sample laboratory analysis, and environmental technical reports relative to Preliminary and Phase I Environmental Site Assessments and investigations. She has experience in the preparation of various environmental technical reports relating to the various environmental investigations in New Jersey and New York.

BRIAN CRESPI
Project Manager
Mr. Crespi has over eight years of experience in the environmental consulting field performing initial and remedial site assessments, hazardous materials assessments, construction oversight, health and safety monitoring, remedial design, and landfill gas evaluations. Mr. Crespi's areas of expertise include brownfield cleanup and redevelopment; investigation and remediation of sites with potential hazardous material contamination; litigation support for cost recovery and insurance matters; development of remedial cost estimates; and vapor intrusion assessments and remediation. Mr. Crespi has extensive experience conducting investigations for clients in both the public and private sectors, including projects focusing on railroads, landfills, industrial and commercial facilities, as well as impacts on neighboring or proposed residential development. Mr. Crespi has developed and directed the implementation of numerous soil, groundwater and vapor intrusion sampling programs for remedial investigations at industrial facilities being evaluated under the New York Spill Response Program and SRRA and ISRA in New Jersey. His environmental science and engineering background, along with varied experience in New York and New Jersey, provide the foundation to develop and implement investigation and remediation plans and develop the findings into reports for various state and federal regulatory programs. Mr. Crespi is certified through the NYC Mayor's Office of Environmental Remediation, as an OER Certified Brownfield Professional, to efficiently achieve brownfield cleanup and redevelopment on New York City Brownfield sites.

MINDY CHASSIN HOROWITZ
Project Director
Ms. Horowitz has over 20 years of experience in the environmental consulting field performing hazardous materials assessments, waterfront permitting, construction oversight and remedial design. Ms. Horowitz's areas of expertise include brownfield cleanup and redevelopment; investigation and remediation of New York City e-designation sites (sites with a zoning map amendment) with potential hazardous material contamination; stormwater pollution prevention; environmental due diligence of industrial, commercial, residential and mixed-use facilities; litigation support for cost recovery and insurance matters; and development of remedial cost estimates. She has extensive experience managing and conducting hydrogeologic investigations for clients in both the public and private sectors, including projects focusing on rail roads, highways, airports and industrial and commercial facilities. Ms. Horowitz has developed and directed the implementation of numerous soil, groundwater and sediment sampling programs for remedial investigations at industrial facilities being evaluated under ISRA. Her combined hydrogeological and geo-environmental engineering background, along with her varied experience in New York and New Jersey, enable her to compile and interpret analytical data to develop clear and technically defensible conceptual site models and incorporate these findings into reports for various state and federal regulatory programs. Mindy is certified through the NYC Mayor's Office of Environmental Remediation, as an OER Certified Brownfield Professional, to efficiently achieve brownfield cleanup and redevelopment on New York City Brownfield sites.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

16-144-7
HICKSVILLE, NY 11801

COORDINATES

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal Delisted NPL site list

Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

A review of the Delisted NPL list, as provided by EDR, and dated 12/05/2016 has revealed that there is 1 Delisted NPL site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
ANCHOR CHEMICALS	*500 WEST JOHN STREET*	*W 1/2 - 1 (0.745 mi.)*	*P79*	*272*

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/12/2016 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

110 DUFFY LLC	*110 DUFFY AVE*	*ESE 1/8 - 1/4 (0.198 mi.)*	*I39*	*113*

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
AAAA-1 AUTO BODY	***112 DUFFY AVE***	***S 0 - 1/8 (0.085 mi.)***	***B6***	***13***

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/14/2016 has revealed that there are 10 NY SHWS sites within approximately 1 mile of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 06/01/2016 has revealed that there are 5 NY VAPOR REOPENED sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 01/04/2017 has revealed that there is 1 NY SWF/LF site within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/06/2017 has revealed that there are 24 NY LTANKS sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/12/2016 has revealed that there are 13 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
Not reported	125 W JOHN ST	NNW 0 - 1/8 (0.100 mi.)	D20	49

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

DEC Memo:	"REFERRED TO LAW ENFORCEMENT"
Remarks:	"Caller states that this is an auto body facility. The workers used thinners to clean the equipment and would just spray the thinners on the walls and floor. The rest would be dumped in various locations. The are other auto related fluids that have been dumped and placed out side of the facility. The town is doing an inspection of the facility of 5/11 and would like DEC assistance. (BD)"

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification:	Conditionally Exempt Small Quantity Generator
Description:	Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Code:	331484
Site Description:	Site Location: The site is located at 230 Duffy Avenue in Hicksville, Nassau County. Site Features: The site occupies approximately 6.76 acres of land. The main site feature include a 122,900 square foot one and two story building. The remainder of the site consists of an asphalt parking area with some limited area of grass cover. The Site is bounded on the north by the Long Island Railroad; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations. The Site building is presently used for warehouse/retail. Surrounding land uses include residential, commercial and industrial uses. Current Zoning/Use: The property, which is located in an urban/suburban area, is currently zoned for commercial/industrial use. Historic Use(s) and Source of Contamination: Philips Electronics North America Corporation (Philips) formerly owned the Site, which was operated by Amperex Electronics Corporation, a subsidiary of Philips. Amperex's primary business was the manufacture of electron tubes, consisting of receiving and transmitting tubes for high power RF and microwave applications. Manufacturing operations included the machining, heat treating, chemical cleaning, metal and glass working, cathode coating and metal plating processes. In the early 1990s, the plant was closed and all manufacturing and process equipment was removed from the

AMPEREX ELECTRONIC CO (Continued) **1000214757**

Site.Site Geology/Hydrogeology: The soils in the area of the Site are classified by the US Department of Agriculture as consisting mostly of urban land soils, which contain a mix of sand, silt, clay and fill material. The depth to groundwater at the Site varies from approximately 55 to 65 feet below grade. The site-specific groundwater flow direction is to the south-southeast.

Env Problem: Nature and Extent of Contamination: Based on the environmental data collected during the RI and supplemental RI that was conducted at the site, the primary contaminants of concern at this site include volatile organic compounds (VOCs) and metals in soil and groundwater. Several VOCs were detected in site soils but below their respective NYSDEC Part 375 Restricted Industrial standards. Two metals, arsenic and mercury, were detected in site soils exceeding the Part 375 Restricted Industrial standards. Several VOCs were detected in site groundwater above the NYSDEC AWQSGVs. Detected compounds include: tetrachloroethene (PCE) at 12 ug/L, cis-1,2-dichloroethene (cis-1,2-DCE) at 14 ug/L, trichloroethene (TCE)at 40 ug/L, 1,1-dichloroethane (1,1-DCA) at 59 ug/L, and 1,1,1-trichloroethane (1,1,1-TCA) at 3000 ug/L. The several metals were detected in site groundwater above the NYSDEC AWQSGV. Soil vapor intrusion into structures on-site is also a concern. Sub-slab and soil vapor samples collected revealed levels exceeding NYSDOH guidance values. 1,1,1 TCE values ranged from 117 ug/m3 to 7,310 ug/m3. Carbon tetrachloride was found at levels ranging from 21 ug/m3 to 1,990 ug/m3. PCE values ranged from 173 ug/m3 to 14,600 ug/m3. TCE values ranged from 6.4 ug/m3 to 355 ug/m3. Regarding sub-slab samples collected, 1,1,1 TCE was found in exceedance of the NYSDOH Sub-Slab guidance value in five of the six sub-slab samples collected, ranging from 446 ug/m3 to 16,600 ug/m3. PCE was found in exceedance in five of the six sub-slab samples, ranging from 479 ug/m3 to 1,530 ug/m3. TCE was found in exceedance in two of the six sub-slab vapor samples ranging from 59.7 ug/m3 to 63.4 ug/m3. Based on a comparison to the NYSDOH guidance document decision matrices, mitigation is warranted. Currently a Remedial Work Plan is being prepared.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes. The site is served by a public water supply that has a treatment system in place to remove contamination prior to distribution to the public. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for inhalation of site contaminants via soil vapor intrusion within the on-site building. Also, the potential exists for off-site migration of contaminated soil vapor toward downgradient residences.

AMPEREX ELECTRONIC CO (Continued) **1000214757**

Several VOCs were detected in site soils but below their respective NYSDEC Part 375 Restricted Industrial standards. Two metals, arsenic and mercury, were detected in site soils exceeding the Part 375 Restricted Industrial standards. Several VOCs were detected in site groundwater above the NYSDEC AWQSGVs. Detected compounds include: tetrachloroethene (PCE) at 12 ug/L, cis-1,2-dichloroethene (cis-1,2-DCE) at 14 ug/L, trichloroethene (TCE)at 40 ug/L, 1,1-dichloroethane (1,1-DCA) at 59 ug/L, and 1,1,1-trichloroethane (1,1,1-TCA) at 3000 ug/L. The several metals were detected in site groundwater above the NYSDEC AWQSGV. Soil vapor intrusion into structures on-site is also a concern. Sub-slab and soil vapor samples collected revealed levels exceeding NYSDOH guidance values. 1,1,1 TCE values ranged from 117 ug/m3 to 7,310 ug/m3. Carbon tetrachloride was found at levels ranging from 21 ug/m3 to 1,990 ug/m3. PCE values ranged from 173 ug/m3 to 14,600 ug/m3. TCE values ranged from 6.4 ug/m3 to 355 ug/m3. Regarding sub-slab samples collected, 1,1,1 TCE was found in exceedance of the NYSDOH Sub-Slab guidance value in five of the six sub-slab samples collected, ranging from 446 ug/m3 to 16,600 ug/m3. PCE was found in exceedance in five of the six sub-slab samples, ranging from 479 ug/m3 to 1,530 ug/m3. TCE was found in exceedance in two of the six sub-slab vapor samples ranging from 59.7 ug/m3 to 63.4 ug/m3. Based on a comparison to the NYSDOH guidance document decision matrices, mitigation is warranted. Currently a Remedial Work Plan is being prepared.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes. The site is served by a public water supply that has a treatment system in place to remove contamination prior to distribution to the public. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for inhalation of site contaminants via soil vapor intrusion within the on-site building. Also, the potential exists for off-site migration of contaminated soil vapor toward downgradient residences.

Site Code: 331484
Site Description: Site Location: The site is located at 230 Duffy Avenue in Hicksville, Nassau County. Site Features: The site occupies approximately 6.76 acres of land. The main site feature include a 122,900 square foot one and two story building. The remainder of the site consists of an asphalt parking area with some limited area of grass cover. The Site is bounded on the north by the Long Island Railroad; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations. The Site building is presently used for warehouse/retail. Surrounding land uses include residential, commercial and industrial uses. Current Zoning/Use: The property, which is located in an urban/suburban area, is currently zoned for commercial/industrial use. Historic Use(s) and Source of Contamination: Philips Electronics North America Corporation (Philips) formerly owned the Site, which was operated by Amperex Electronics Corporation, a subsidiary of Philips. Amperex's primary business was the manufacture of electron tubes, consisting of receiving and transmitting tubes for high power RF and microwave applications. Manufacturing operations included the machining, heat treating, chemical cleaning, metal and glass working, cathode coating and metal plating processes. In the early 1990s, the plant was closed and all manufacturing and process equipment was removed from the Site.Site Geology/Hydrogeology: The soils in the area of the Site are classified by the US Department of Agriculture as consisting mostly of urban land soils, which contain a mix of sand, silt, clay and fill material. The depth to groundwater at the Site varies from approximately 55 to 65 feet below grade. The site-specific groundwater flow direction is to the south-southeast.
Env Problem: Nature and Extent of Contamination: Based on the environmental data collected during the RI and supplemental RI that was conducted at the site, the primary contaminants of concern at this site include volatile organic compounds (VOCs) and metals in soil and groundwater. Several VOCs were detected in site soils but below their respective NYSDEC Part 375 Restricted Industrial standards. Two metals, arsenic and mercury, were detected in site soils exceeding the Part 375 Restricted Industrial standards. Several VOCs were detected in site groundwater above the NYSDEC AWQSGVs. The main site feature include a 122,900 square foot one and two story building. The remainder of the site consists of an asphalt parking area with some limited area of grass cover. The Site is bounded on the north by the Long Island Railroad; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations. The Site building is presently used for warehouse/retail. Surrounding land uses include residential, commercial and industrial uses. Current Zoning/Use: The property, which is located in an urban/suburban area, is currently zoned for commercial/industrial use. Historic Use(s) and Source of Contamination: Philips Electronics North America Corporation (Philips) formerly owned the Site, which was operated by

AMPEREX ELECTRONIC CO (Continued) **1000214757**

Amperex Electronics Corporation, a subsidiary of Philips. Amperex's primary business was the manufacture of electron tubes, consisting of receiving and transmitting tubes for high power RF and microwave applications. Manufacturing operations included the machining, heat treating, chemical cleaning, metal and glass working, cathode coating and metal plating processes. In the early 1990s, the plant was closed and all manufacturing and process equipment was removed from the Site.Site Geology/Hydrogeology: The soils in the area of the Site are classified by the US Department of Agriculture as consisting mostly of urban land soils, which contain a mix of sand, silt, clay and fill material. The depth to groundwater at the Site varies from approximately 55 to 65 feet below grade. The site-specific groundwater flow direction is to the south-southeast.

Env Problem: Nature and Extent of Contamination: Based on the environmental data collected during the RI and supplemental RI that was conducted at the site, the primary contaminants of concern at this site include volatile organic compounds (VOCs) and metals in soil and groundwater. Several VOCs were detected in site soils but below their respective NYSDEC Part 375 Restricted Industrial standards. Two metals, arsenic and mercury, were detected in site soils exceeding the Part 375 Restricted Industrial standards. Several VOCs were detected in site groundwater above the NYSDEC AWQSGVs. Detected compounds include: tetrachloroethene (PCE) at 12 ug/L, cis-1,2-dichloroethene (cis-1,2-DCE) at 14 ug/L, trichloroethene (TCE)at 40 ug/L, 1,1-dichloroethane (1,1-DCA) at 59 ug/L, and 1,1,1-trichloroethane (1,1,1-TCA) at 3000 ug/L. The several metals were detected in site groundwater above the NYSDEC AWQSGV. Soil vapor intrusion into structures on-site is also a concern. Sub-slab and soil vapor samples collected revealed levels exceeding NYSDOH guidance values. 1,1,1 TCE values ranged from 117 ug/m3 to 7,310 ug/m3. Carbon tetrachloride was found at levels ranging from 21 ug/m3 to 1,990 ug/m3. PCE values ranged from 173 ug/m3 to 14,600 ug/m3. TCE values ranged from 6.4 ug/m3 to 355 ug/m3. Regarding sub-slab samples collected, 1,1,1 TCE was found in exceedance of the NYSDOH Sub-Slab guidance value in five of the six sub-slab samples collected, ranging from 446 ug/m3 to 16,600 ug/m3. PCE was found in exceedance in five of the six sub-slab samples, ranging from 479 ug/m3 to 1,530 ug/m3. TCE was found in exceedance in two of the six sub-slab vapor samples ranging from 59.7 ug/m3 to 63.4 ug/m3. Based on a comparison to the NYSDOH guidance document decision matrices, mitigation is warranted. Currently a Remedial Work Plan is being prepared.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes. The site is served by a public water supply that has a treatment system in place to remove contamination prior to distribution to the public. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for inhalation of site contaminants via soil vapor intrusion within the on-site building. Also, the potential exists for off-site migration of contaminated soil vapor toward downgradient residences.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Record Added Date:	10/01/2004
Record Updated Date:	09/26/2016
Update By:	WJPARISH
Site Description:	Site Location: The site is located at 230 Duffy Avenue in Hicksville, Nassau County. Site Features: The site occupies approximately 6.76 acres of land. The main site feature include a 122,900 square foot one and two story building. The remainder of the site consists of an asphalt parking area with some limited area of grass cover. The Site is bounded on the north by the Long Island Railroad; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations. The Site building is presently used for warehouse/retail. Surrounding land uses include residential, commercial and industrial uses. Current Zoning/Use: The property, which is located in an urban/suburban area, is currently zoned for commercial/industrial use. Historic Use(s) and Source of Contamination: Philips Electronics North America Corporation (Philips) formerly owned the Site, which was operated by Amperex Electronics Corporation, a subsidiary of Philips. Amperex's primary business was the manufacture of electron tubes, consisting of receiving and transmitting tubes for high power RF and microwave applications. Manufacturing operations included the machining, heat treating, chemical cleaning, metal and glass working, cathode coating and metal plating processes. In the early 1990s, the plant was closed and all manufacturing and process equipment was removed from the Site.Site Geology/Hydrogeology: The soils in the area of the Site are classified by the US Department of Agriculture as consisting mostly of urban land soils, which contain a mix of sand, silt, clay and fill material. The depth to groundwater at the Site varies from approximately 55 to 65 feet below grade. The site-specific groundwater flow direction is to the south-southeast.
Env Problem:	Nature and Extent of Contamination: Based on the environmental data collected during the RI and supplemental RI that was conducted at the site, the primary contaminants of concern at this site include volatile organic compounds (VOCs) and metals in soil and groundwater. Several VOCs were detected in site soils but below their respective NYSDEC Part 375 Restricted Industrial standards. Two metals, arsenic and mercury, were detected in site soils exceeding the Part 375 Restricted Industrial standards. Several VOCs were detected in site groundwater above the NYSDEC AWQSGVs. Detected compounds include: tetrachloroethene (PCE) at 12 ug/L, cis-1,2-dichloroethene (cis-1,2-DCE) at 14 ug/L, trichloroethene (TCE)at 40 ug/L, 1,1-dichloroethane (1,1-DCA) at 59 ug/L, and 1,1,1-trichloroethane (1,1,1-TCA) at 3000 ug/L. The several metals were detected in site groundwater above the NYSDEC AWQSGV. Soil vapor intrusion into structures on-site is also a concern. Sub-slab and soil vapor samples collected revealed levels exceeding NYSDOH guidance values. 1,1,1 TCE

230 DUFFY AVENUE (Continued) **S102135819**

values ranged from 117 ug/m3 to 7,310 ug/m3. Carbon tetrachloride was found at levels ranging from 21 ug/m3 to 1,990 ug/m3. PCE values ranged from 173 ug/m3 to 14,600 ug/m3. TCE values ranged from 6.4 ug/m3 to 355 ug/m3. Regarding sub-slab samples collected, 1,1,1 TCE was found in exceedance of the NYSDOH Sub-Slab guidance value in five of the six sub-slab samples collected, ranging from 446 ug/m3 to 16,600 ug/m3. PCE was found in exceedance in five of the six sub-slab samples, ranging from 479 ug/m3 to 1,530 ug/m3. TCE was found in exceedance in two of the six sub-slab vapor samples ranging from 59.7 ug/m3 to 63.4 ug/m3. Based on a comparison to the NYSDOH guidance document decision matrices, mitigation is warranted. Currently a Remedial Work Plan is being prepared.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes. The site is served by a public water supply that has a treatment system in place to remove contamination prior to distribution to the public. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for inhalation of site contaminants via soil vapor intrusion within the on-site building. Also, the potential exists for off-site migration of contaminated soil vapor toward downgradient residences.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was PARISH SOIL BORINGS & MW'S INSTALLED AND MONITORED, NO OTHER ACTION NEEDED 08/27/90: Nassau County Health reported finding contamination during routine removal of one 15K #6 oil tank. Approx 70-80cy soil removed. Could not get it all. 10/01/90: DEC (Parish) letter to Joe Wolf (Phillips Corp , 100 Providence Pike, Slatersville RI, 02876)- Request wells, monitoring for floating product, and sampling for dissolved product. 10/19/90: Philips Components letter- Will perform the work. 01/02/97: Letter to Philips- Appears requested investigation was never performed. Please advise on whether this is so. 01/23/97 (A): Fluor Daniels (consultant for Philips) proposal- Will have 2 soil borings performed. Split-spoon samples will be taken and field screened; one sample from each boring will be analyzed. Borings will be finished as well if contamination extends to within 20ft of water table. Groundwater samples will be taken if needed. 01/23/97 (B): MAP SHOWS APPROX 12 MONITORING WELLS AROUND THE SITE. 03/06/97 (A): Parish on site with Fluor Daniels et al- Site being sold. Performed 2 borings. Geoprobes previously done in old tank bed; water samples taken. 04/04/97: Philips submits Fluor Daniels' report- Some contamination noted in boring 1 from approx 15ft to 27ft. Levels below DEC guidance. Depth to water approx 63ft. 04/07/97: Letter to Philips- No further requirements at this time."
Remarks:	"70-80 YDS STOCKPILED. EXCAVATION BACKFILLED.LARGE AMOUNT OF CONTAMINATION REMAINING IN THE GROUND. "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was PARISH WELL 12/31/86: Long Island Lighting reported gasoline odors in the building and in their utilities. 01/05/87: As per Nassau County Fire Marshal- odor was noted where utilities enter building. Amperex has a 275 gal gasoline tank for their generator, and a 3K gal alcohol tank. NY Telephone is next door (202 Duffy). NCFM to request tank tests; Nassau County Health to check air quality. 01/06/87: As per NCFM- found 2000ppm in pit in the building. NY Tel has 1 abandoned 4K and 1 abandoned 2K. 01/09/87 (A): DEC (Parish) met NCFM on site- Confirmed gasoline odor. Has sketch. 01/09/87 (B): POSSIBLE SOURCES-

230 DUFFY AVENUE (Continued) **S102135819**

Amperex has 1 275 gal gasoline tank, 1 15K #4 oil tank, and the 3K alcohol tank. NY Tel (next door E) has some abandoned tanks and a 10K gasoline tank. Old farm across street to S has 550 gal gas. There are others further away. 01/16/87: Parish on site- requested access from Amperex for investigation. 01/30/87: Amperex denying access unless gasoline was found in significant amounts . 02/06/87: NCHD report of 6 and 14Jan- Some BTEX in utility pit, along with chlorinated solvents. 03/02/87: Parish on site with Tyree- performed soil gas survey along Duffy, and between Amperex and NY Tel, and took samples. Has sketch. 03/06/87: Map- shows old gasoline , fresh gasoline , and chlorinated hydrocarbons . 04/27/87: Parish and Tyree on site- Installed well on Duffy. 04/28/87 - 04/30/87: Tyree installed more wells along Duffy, between Amperex and NY Tel. 07/17/87: Parish letter to NY Tel- Request info on numbers and locations of past and present tanks; on-site investigation. Gives scenario for failure to comply. 08/04/87 (A): NY Tel to have soil borings performed next to the tanks. Will finish them as wells if necessary. 08/04/87 (B): MAP SHOWS 1 ABANDONED 550 GALLON DIESEL TANK, 1 ABANDONED 550 GALLON GASOLINE TANK, 1 ABANDONED 2K GASOLINE TANK, 1 ABANDONED 4K GASOLINE TANK, 1 550 GAL WASTE OIL TANK, 1 3K FUEL OIL TANK, AND 1 10K GASOLINE TANK. 08/11/87: DEC (Acampora) on site- Borings performed at NY Tel near abandoned gas and diesel tanks. Soil ok. 10/20/87: Pedneault sampled- Low levels of BTEX, along with tetrachlorethane. 02/10/88: DEC (Mirza) checked U-tubes of the 10K tank on N side of NY Tel- FOUND 8 PRODUCT IN THE WEST TUBE. THIS OCCURRED ONLY ONCE. 02/16/88: Mirza checked wells- no floating product. 03/21/88: Tyree installed wells around tank at rear of NY Tel. 07/06/88: Pedneault to sample for BTEX. 07/18/89: Letter to Tyree- cease monitoring of wells (no floating product ever found?). 01/17/89: Parish on site with Amperex and consultant- SITE BEING SOLD. Consultant to sample. 05/03/91: Tyree letter- No floating product from 7Apr88 to 9Mar90. Request closure. 05/21/91: Letter to Tyree- sample for dissolved product. 07/31/91: Tyree letter- sampled 26Jun. FOUND 2060PPB MTBE AND 343PPB BTEX IN WELL 1 ; TRACE MTBE AND 55PPB BTEX IN WELL 2 . 03/10/97: Letter to 230 DUFFY REALTY CORP - There is no identified responsible party or groundwater impact based on our investigation . The spill will be closed. ***NOTE: SEE ALSO 8704418 (210 DUFFY-AMPEREX)- 15K #2 OIL TANK FAILED TIGHTNESS TEST. PASSED RETEST 6SEPT87. CLOSED 23SEPT87. FILE MISSING. ***NOTE: SEE ALSO 9005890 (230 DUFFY- AMPEREX)- CONTAMINATION FOUND DURING ROUTINE REMOVAL OF 1 15K #6 OIL TANK. APPROX 70-80CY SOIL REMOVED. DEC Memo:	"02/04/13 1550 Hrs (A): Called Response and spoke to MATT GEIGER-

MCDONALD RESIDENCE (Continued) **S103941164**

THEY WERE CONTACTED BY HIRSCH FUEL. 02/04/13 1550 Hrs (B): Response has dispatched KEN WATSON (CLEAR VIEW ENVIRONMENTAL) to document the situation. DR 02/04/13 1605 Hrs (A): Wood called- she confirmed that the oil has been transferred to drums. Hirsch will set up a temporary tank and reuse that oil. 02/04/13 1605 Hrs (B): The tank was on a concrete slab, but the oil impacted both the slab and surrounding soil. She confirmed it is believed approximately 25gal of oil leaked. 02/04/13 1605 Hrs (C): The owner has already contacted her insurance, who said she has no coverage BUT WOOD SUGGESTED THE OWNER SPEAK TO HER INSURANCE AGAIN. 02/04/13 1605 Hrs (D): WOOD SAID THE OWNER IS ELDERLY, DISABLED, AND ON SOCIAL SECURITY, AND HAS LIMITED FUNDS. DEC informed Wood that it is allowable for the owner to have a relative or friend EXCAVATE the contaminated soil. DR Clenup completed by the homeowner. All materials have been removed and properly disposed of. No further action. OK for closure."

Remarks: "Outside tank leaked into slab and soil. FD called and pumped oil into drums. Replacement being scheduled. Cleanup is pending."

Record Upd: 10/03/2016
Updated By: SLEDWARD
Site Description: Location:The ALSY site is located in an urban/suburban portion of Nassau County. The site is located approximately 4000 feet east of the Wantaugh State Parkway at 270/280 Duffy Avenue in Hicksville. The Site occupies approximately 4 acres of land. Site Features:The main Site features include several large one-story buildings surrounded by asphalt parking areas. The Site is bounded on the north by the Long Island Railroad and a construction and demolition (C&D) debris reclaimer; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations.Current Zoning/Use(s):The Site buildings are presently used for commercial business. Surrounding land uses include residential, commercial and industrial uses.Historical Use(s): Prior to 1975, Metalab, a laboratory furniture manufacturer, conducted operations at the Site. ALSY Manufacturing manufactured electric lamps and lampshades at this facility from 1975 through 1991. ALSYs manufacturing processes included bronze plating, electroplating, and antiquing. Waste material that was generated included metals plating waste, wastewater treatment sludge, paint thinner, acidic paint stripper, alkaline paint stripper, and 1,1,1-trichloroethane. A remedial investigation was completed in several phases between 1995 and 2003. A Record of Decision (ROD) was issued March 2005. The ROD required a soil vapor intrusion assessment, rerouting the drainage of the parking lot, excavation/disposal of contaminated dry well sediments and installing monitoring wells between the site and a public water supply well. The Remedial Design was completed June 2009. The Remedial Construction to implement the remedy began January 2010. The contract cost was $1.312 Million. Construction was completed in April 2010. The Project is in Site Management. Due to remaining contamination, an Environmental Notice was filed on the property on May 29, 2013. Groundwater

ALSY MANUFACTURING, INC. (Continued) **S104541551**

	monitoring is performed periodically.Site Geology and Hydrogeology:The site is underlain by glacially derived sand and gravel deposits. Groundwater is found approximately 50 feet below ground surface, and flow is in a southerly direction.
Env Problem:	The primary contaminants of concern at the Site were associated with historic metal plating operations. Contaminants that exceeded clean-up guideline concentrations included arsenic, chromium, copper, nickel and zinc in the soil and nickel in the groundwater. Chlorinated solvents were also found in soil vapor on-site, triggering mitigation of overlying structures. A SSDS system has been installed by the current owner of the overlying structures.The remedial action for the site involved excavation and off-site disposal of contaminated soils and sludge/waste from drywells at the site. These source removal actions are expected to prevent further releases to groundwater and reduce nickel concentrations south of the site (dissolved nickel has exceeded the groundwater standard). A monitoring program is being implemented to ensure that these actions remain protective of active public water supply wells are located generally downgradient of the site.
Health Problem:	Access to the site is unrestricted and a majority of the site is covered by buildings and pavement. However, contact with contaminated soil or groundwater is unlikely unless they dig below the surface materials. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Subslab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in both of the on-site buildings to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Code: 55767
Site Description: Location:The ALSY site is located in an urban/suburban portion of Nassau County. The site is located approximately 4000 feet east of the Wantaugh State Parkway at 270/280 Duffy Avenue in Hicksville. The Site occupies approximately 4 acres of land. Site Features:The main Site features include several large one-story buildings surrounded by asphalt parking areas. The Site is bounded on the north by the Long Island Railroad and a construction and demolition (C&D) debris reclaimer; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations.Current Zoning/Use(s):The Site buildings are presently used for commercial business. Surrounding land uses include residential, commercial and industrial uses.Historical Use(s): Prior to 1975, Metalab, a laboratory furniture manufacturer, conducted operations at the Site. ALSY Manufacturing manufactured electric lamps and lampshades at this facility from 1975 through 1991. ALSYs manufacturing processes included bronze plating, electroplating, and antiquing. Waste material that was generated included metals plating waste, wastewater

ALSY MANUFACTURING, INC. (Continued) **S104541551**

treatment sludge, paint thinner, acidic paint stripper, alkaline paint stripper, and 1,1,1-trichloroethane. A remedial investigation was completed in several phases between 1995 and 2003. A Record of Decision (ROD) was issued March 2005. The ROD required a soil vapor intrusion assessment, rerouting the drainage of the parking lot, excavation/disposal of contaminated dry well sediments and installing monitoring wells between the site and a public water supply well. The Remedial Design was completed June 2009. The Remedial Construction to implement the remedy began January 2010. The contract cost was $1.312 Million. Construction was completed in April 2010. The Project is in Site Management. Due to remaining contamination, an Environmental Notice was filed on the property on May 29, 2013. Groundwater monitoring is performed periodically.Site Geology and Hydrogeology:The site is underlain by glacially derived sand and gravel deposits. Groundwater is found approximately 50 feet below ground surface, and flow is in a southerly direction.

Env Problem: The primary contaminants of concern at the Site were associated with historic metal plating operations. Contaminants that exceeded clean-up guideline concentrations included arsenic, chromium, copper, nickel and zinc in the soil and nickel in the groundwater. Chlorinated solvents were also found in soil vapor on-site, triggering mitigation of overlying structures. A SSDS system has been installed by the current owner of the overlying structures.The remedial action for the site involved excavation and off-site disposal of contaminated soils and sludge/waste from drywells at the site. These source removal actions are expected to prevent further releases to groundwater and reduce nickel concentrations south of the site (dissolved nickel has exceeded the groundwater standard). A monitoring program is being implemented to ensure that these actions remain protective of active public water supply wells are located generally downgradient of the site.

Health Problem: Access to the site is unrestricted and a majority of the site is covered by buildings and pavement. However, contact with contaminated soil or groundwater is unlikely unless they dig below the surface materials. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Subslab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in both of the on-site buildings to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

ALSY MANUFACTURING, INC. (Continued) **S104541551**

Site features include several large one-story buildings surrounded by asphalt parking areas. The Site is bounded on the north by the Long Island Railroad and a construction and demolition (C&D) debris reclaimer; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations.Current Zoning/Use(s):The Site buildings are presently used for commercial business. Surrounding land uses include residential, commercial and industrial uses.Historical Use(s): Prior to 1975, Metalab, a laboratory furniture manufacturer, conducted operations at the Site. ALSY Manufacturing manufactured electric lamps and lampshades at this facility from 1975 through 1991. ALSYs manufacturing processes included bronze plating, electroplating, and antiquing. Waste material that was generated included metals plating waste, wastewater treatment sludge, paint thinner, acidic paint stripper, alkaline paint stripper, and 1,1,1-trichloroethane. A remedial investigation was completed in several phases between 1995 and 2003. A Record of Decision (ROD) was issued March 2005. The ROD required a soil vapor intrusion assessment, rerouting the drainage of the parking lot, excavation/disposal of contaminated dry well sediments and installing monitoring wells between the site and a public water supply well. The Remedial Design was completed June 2009. The Remedial Construction to implement the remedy began January 2010. The contract cost was $1.312 Million. Construction was completed in April 2010. The Project is in Site Management. Due to remaining contamination, an Environmental Notice was filed on the property on May 29, 2013. Groundwater monitoring is performed periodically.Site Geology and Hydrogeology:The site is underlain by glacially derived sand and gravel deposits. Groundwater is found approximately 50 feet below ground surface, and flow is in a southerly direction.

Env Problem: The primary contaminants of concern at the Site were associated with historic metal plating operations. Contaminants that exceeded clean-up guideline concentrations included arsenic, chromium, copper, nickel and zinc in the soil and nickel in the groundwater. Chlorinated solvents were also found in soil vapor on-site, triggering mitigation of overlying structures. A SSDS system has been installed by the current owner of the overlying structures.The remedial action for the site involved excavation and off-site disposal of contaminated soils and sludge/waste from drywells at the site. These source removal actions are expected to prevent further releases to groundwater and reduce nickel concentrations south of the site (dissolved nickel has exceeded the groundwater standard). A monitoring program is being implemented to ensure that these actions remain protective of active public water supply wells are located generally downgradient of the site.

Health Problem: Access to the site is unrestricted and a majority of the site is covered by buildings and pavement. However, contact with contaminated soil or groundwater is unlikely unless they dig below the surface materials. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Subslab depressurization systems (systems that ventilate/remove the air

ALSY MANUFACTURING, INC. (Continued) **S104541551**

beneath the building) have been installed in both of the on-site buildings to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Description:	Location: Magnusonics is a 3 acre site located at 290 Duffy Avenue, in the Hicksville section of the Town of Oyster Bay. Site Features: The entire site is paved or covered by the building structure. The northernmost and southernmost portions of the site are used as parking areas. Current Zoning and land use: Site is zoned light industrial and is presently occupied by Custom Closets and the Daily News. The site is located within a mixed use area that consists of commercial/industrial properties to the north, east and west and residential properties to the south. The Long Island Railroad tracks border the site to the north.Historical Uses: Magnusonics Devices manufactured computer tape recording heads, an operation which generated both hazardous and non-hazardous wastes. Processes included photographic etching of thin sheet metal as well as copper and chrome electroplating. The facility used a physical chemical treatment system that processed rinse waters from its plating and chemical milling operations, and discharged the treated wastewater, which contained metals and solvents, into on-site leaching pools. Plating wastes containing chromium and lead were discharged into a leaching pool. A ferric hydroxide sludge which contained lead and iron was generated as part of the facility's processes and discovered beneath the parking lot at the northern portion of the site. Site Geology and Hydrogeology:Groundwater was encountered at a depth of approximately 60 feet below land surface. Groundwater flow direction was determined to be to the south.
Env Problem:	Nature and Extent of Contamination:Remediation at the site is complete. The primary site contaminants of concern were metals in soils and groundwater. The selected remedy was performed and met the remediation goals identified in the Record of Decision.
Health Problem:	Remedial actions taken have eliminated the potential for contact with site-related contaminants.

Corrective Action Summary:

Event date: 07/30/1993
Event: RFI Workplan Approved

Event date: 04/20/1995
Event: RFA Completed

Event date: 05/24/1995
Event: RFA Determination Of Need For An RFI, RFI is Necessary;

Event date: 06/19/1995
Event: CA Responsibility Referred To A Non-RCRA Federal Authority, Corrective Action referred to another non-RCRA Federal Authority.

Event date: 08/26/1996
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 09/23/2011
Event: CA550RC

Event date: 09/23/2011
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 02/19/2014
Event: Corrective Action Process Terminated, Remedial Activities Completed

Event date: 02/20/2014

SPORT STAMP & THE CLOSET (Continued) **1000323314**

Event: CA800YE

Event date: 02/26/2014
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Summary Details:

Conditions at proposal October 15, 1984): Anchor Chemicals has operated on a 0.9-acre site in Hicksville, Nassau County, New York, since l964. The facility blends and packs chemicals for the graphic arts industry. In l978, Anchor Chemicalswas purchased by Chessco Industries. The new company is known as AnchorLith Kem Ko. Below the concrete floor of the building on the site are l7 storage tanks with capacities ranging from l,000 to 2,000 gallons. A number of the tanks leaked during various pressure tests performed from 1981 through January 1983 by the Nassau County fire marshall and AnchorLith Kem Ko. The company has installed three monitoring wells at the site. Analyses by the company indicate that thewells are contaminated with volatile organic chemicals similar to those contained at various times in the storage tanks. About 90,000 people draw drinking water from wells within 3 miles of the site. Status June 10, 1986): EPA isconsidering various alternatives for the site.

Site Description: LEAKING UNDERGROUND STORAGE TANK RELEASE OF VOLATILE ORGANICCOMPOUNDS.The Anchor Chemical Superfund Site is located at 500 West John Street in the Village of Hicksville, Town of Oyster Bay, Nassau County, New York. The surrounding area is primarily industrial. The Site is bordered to the west by a commercial property, to the south by West John Street and to the Northwest by Cantiague Park, a 125-acre recreational facility. A groundwater recharge basin lies to the east of the Site. The Site is approximately 1.5 acres in size and includes one 28,850 square foot, two story building. Before construction of the building in 1964, the Site was used for agricultural purposes. Anchor Chemical leased the Site from 1964 to 1978 and began manufacturing, blending, and storing chemicals for the graphic arts industry. The company operated two solvent mixing rooms and several container storage areas. In 1964, seventeen under-ground storage tanks (USTs) which ranged in size from 500 to 4,000 gallons were installed under the mixing rooms. The tanks were used to store chemicals and solvents, such as acetone, 1,1,1 trichloroethane, methylene chloride, 2-butoxyethanol and isopropyl alcohol. The chemicals were also stored in seven aboveground tanks, which ranged in size from 550 to 1,500 gallons and were removed in 1985. In addition, there are 9 dry wells and one drain, which are located in the parking lot on Site. These wells and drain were installed to collect rainwater runoff and drainage from the building. Most of the Site is paved with asphalt. Liquid which collects in the dry wells infiltrates into the soil. Four of the dry wells are contaminated with metals and volatile organic compounds (VOCs). The average depth to the water table at the Site is 50 to 60 feet. The following three aquifers underlay the Site, the Upper Glacial Aquifer, the Magothy Aquifer, and the Lloyd Aquifer. All three aquifers serve as a source of drinking water for Long Island, NY. The direction of groundwater flow is to the southwest. Analysis of groundwater samples taken from these aquifers revealed that they have been contaminated with inorganic and organic chemicals. In 1977, the Nassau County Health

ANCHOR CHEMICALS (Continued) **1000243745**

Department (NCHD) discovered 1,1,1 trichloroethane, trichloroethene (TCE) and tetrachloroethene (PCE) in liquid samples near drywell 1. In response, Anchor Chemical submitted a spill prevention plan to the NCHD. In 1978, Anchor Chemicals was purchased by Chessco Industries and became known as Anchor/Lith Kem-Ko. Company operations were terminated in 1985. Since 1985, the following tenants have occupied the Site: from 1985 to 1988, Emery Worldwide Freight; from 1988 to 1992, J.D. Brauner; from 1992 to 1994, Distributors of America; and from 1994 to present, Machinery Values. In May 1981, the Nassau County Fire Marshall notified Anchor that the 17 underground storage tanks (USTs) on Site had not been registered with the Fire Marshall or tested for leaks. In subsequent testing of 14 of the 17 USTs, 5 tanks failed air over product tank tightness tests. The five tanks were decommissioned in 1983. The three remaining tanks were tested from 1982 to 1983; one failed. In 1982, the NCHD requested that Anchor/Lith Kem-Ko investigate the possibility of groundwater and soil contamination at the Site. Three groundwater monitoring wells were installed in September 1982, and tests indicated the presence of 24,000 ppb of 1,1,1 TCA, 1,100 ppb of PCE, 350 ppb of dichloroethane, 170 ppb of chlorodibromomethane, 41 ppb of methylene chloride and 55 ppb of TCE. Soil samples taken during the installation of one well revealed 490 ppb of methylene chloride and 22 ppb of 1,1,1-TCA. In January 1983, the Site was included on the New York State Department of Environmental Conservations (NYSDEC's) list of hazardous waste sites in Nassau County. On June 10, 1986, the Site was added to the National Priorities List (NPL). On June 2,1989, EPA issued an Administrative Order on Consent to the K. B. Company, the owner of the property and successor to Kobar, to undertake a remedial investigation/feasibility study (RI/FS) to determine the nature and extent of contamination at the Site and to evaluate options for cleanup. On August 3, 1989, EPA issued an Administrative Order to Chessco Industries, which required it to participate and cooperate with K.B. Company. On March 31, 1992, EPA issued an Administrative Order to Anchor Lith/Kem-Ko, which also required it to participate and cooperate in the performance of the RI/FS. The RI field work was completed in February 1995, compiled by the potentially responsible parties (PRPs) and submitted to the EPA in March 1995. The Risk Assessment was finalized by the EPA on June 2, 1995. On September 15, 1995, K.B. Company, the owner of the property, Anchor Lith/Kem-Ko and Chessco Industries, a former owner of Anchor Lith/ Kem-Ko, were ordered by the EPA to remove the contaminated sediment and soil from four on Site dry wells. K.B. Company was issued an unilateral administrative order, while Anchor Lith/Kem-Ko and Chessco industries were issued an administrative consent order for the removal work. A workplan for the drywell removal action was approved by EPA on September 28, 1995. The actual removal of the material from the drywells occurred on September 29, 1995. On September 29, 1995, a No Action Record of Decision (ROD) was signed for the Site.

Site Description: The Anchor Lith Kem Ko site is located at 500 West John Street in the Village of Hicksville, Town of Oyster Bay, Nassau County, New York. The main site feature is a 28,850 square foot, two story building, a small lawn area in the front, and a paved parking lot in the front and rear of the building. The site is presently active and is zoned for commercial use. The surrounding parcels are predominantly commercial/industrial but recreational areas are located to the north. The nearest residential area is approximately 1,200 feet to the east.Contamination at the site is attributed to the building's past use as a chemical blending and packaging operation. Chemicals utilized during operations included acetone, 1,1,1-trichloroethane (TCA), methylene chloride, 2-butoxyethanol, and isopropyl alcohol. There were several on-site dry wells believed to have been impacted by site operations, as well as six underground storage tanks that failed tank tightness tests in the 1980's. A record of decision was issued for this site by the U.S. Environmental Protection Agency (EPA) on September 29, 1995. Additional investigations were conducted from 2008 to 2010 to evaluate off-site groundwater and soil vapor intrusion. All off-site groundwater concerns and soil vapor intrusion concerns have been adequately addressed and no further action is required. The local geology consists primarily of medium to fine sand with gravel and discontinuous clay layers. The Upper Glacial Aquifer is approximately 50 feet below ground surface and flows towards the south-southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were chlorinated organics (TCA) and metals (chromium and lead) within the soil and groundwater. The 17 underground storage tanks have been abandoned in place. The 7 aboveground storage tanks have been removed. The impacted soils within the dry wells were removed. The site does not present a significant threat to the environment.

Health Problem: Direct contact with contaminants in soil is unlikely because contaminated soils were excavated and properly disposed off the site. People are not coming into contact with the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of a building, is referred to as soil vapor intrusion. The potential for soil vapor intrusion to occur within the on-site building was evaluated and sampling indicated that soil vapor intrusion is not a

ANCHOR LITH KEM KO (ANCHOR CHEM) (Continued) **S104648236**

concern for the building. In addition, sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Updated By: JBSWARTO
Site Description: The site consists of a one story masonry building located on a two acre parcel in a commercial/industrial setting in Nassau County. The site is located at the southern end of Frank Road. Historical operations at the facility consisted of importing commercial dry cleaning machinery for assembly, testing and distribution. In 1989, a spill of dry cleaning fluid (PCE) into an on-site leaching pool system contaminated subsurface soil and groundwater. The surrounding area consists of residential properties to the east and south and commercial properties to the north and west.An environmental assessment was conducted in December 1989 in response to an accidental discharge of PCE at the site. In March 1991, the NYSDEC oversaw the excavation and removal of approximately 450 tons of contaminated soil (maximum depth 29 ft bgs). In August 1992, a site screening investigation (SSI) was performed. Based on the findings interim remedial measures were performed in September 1992. The facility was connected to the municipal sewer system.The Remedial Investigation (RI) was conducted in September, 1992 (Phase I) and in September 1993 (Phase II). After the completion of an on-site and off-site remedial investigation a record of decision (ROD) was issued in March 1999. As prescribed in the ROD, groundwater sampling was conducted on a quarterly basis for three years starting in June 2000. On February 26, 2004, the site was delisted when the groundwater quality goals (NYS Drinking Water Standards) were obtained. A soil vapor intrusion evaluation was initiated in September 2006 with subsequent activities in March 2007. The vapor investigation was

BOWE SYSTEMS AND MACHINERY (Continued) **S103565986**

	completed in December 2007. The investigation did not identify any unacceptable indoor air contamination, but did find levels of chlorinated solvents in sub-slab soil vapor, which triggered a recommendation for action to protect indoor air quality.
Env Problem:	The primary contaminants detected at the site are tetrachloroethylene (PCE), 1,1,1 trichloroethylene (TCA), and trichloroethylene (TCE). Groundwater samples obtained at the site did not detect site contaminants in September 2006. Air samples collected in September 2006 and March 2007 detected elevated concentrations of site contaminants in the soil vapor and sub-slab soil vapor at the site. In door air levels at the on-site structure were below or slightly above background levels. Off-site structure sampling detected minimal impacts from site contaminants.
Health Problem:	The site is covered by buildings and pavement so public exposures to contaminated soils are not expected unless excavation occurs on the site. Exposures to contaminated groundwater via drinking water are not expected because public water serves the area and groundwater levels are below applicable standards, criteria, and guidance values. The potential for soil vapor intrusion was investigated, and no further actions were necessary for the off-site structures; however, the potential for future exposures via soil vapor intrusion into the on-site structure exists.

Updated By:	DJEVANS
Site Description:	In 1963, AGO Associates purchased this property, which was then a 35 to 45 foot deep sand pit covering about 10 acres. Between 1963 and January, 1979 the pit was filled with construction and demolition material. Local residents recall that although a sign at the facility entrance advertised for "clean fill", all kinds of truckloads of waste were disposed there. In 1974 the Nassau County Health Dept. discovered several dozen drums reportedly containing industrial solvents lacquers, and thinners. The Health Department ordered the removal of the drums and others that were subsequently discovered at the site. By January 1975, all of the drums were removed and disposed of. In September 1987, NYSDEC collected surficial soil samples from a portion of the site which was occupied by an asphalt company at the time. A Phase I report was completed in September of 1989. A State Funded Phase II investigation was completed in 1992. Despite the reports of drum disposal, analytical results from the monitoring wells revealed no significant contamination.
Env Problem:	Low levels of pesticides and VOCs were found in surface soil samples at the site. Although contamination has been reported in the wells downgradient of this site, connections have not been established between that contamination and past activities at the AGO Associates landfill operation.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

SHWS:
Program: HW
Site Code: 386151
Classification: Significant threat to the public health or environment - action required.
Region: 1
Acres: 6.79
HW Code: 130179
Record Add: 08/20/2007
Record Upd: 01/08/2016
Updated By: GTBOBERS
Site Description: Location: The Metco site is located at 325 Duffy Avenue in suburban Hicksville. The site is about 6.8 acres and is bounded by Henrietta Street to the west.Site Features: The main site features include one large building surrounded by parking lots and roadways. A storm water recharge basin is located in the southeastern corner of the site.Current Zoning and Land Use: The property is currently zoned Commercial; storage, warehouse and distribution. The surrounding area is a mix of commercial and industrial use. The nearest residential property is about 140 feet east of the site.Past Use of the Site: The site has been historically used for light manufacturing and metal working, machining, metal finishing (including a vapor degreaser), and metal spraying. These prior uses appear to have led to site contamination. Nassau County Department of Health sampling of the wastewater discharge point and on-site private water well were reported to have solvent related contaminantsSite Geology and Hydrogeology: The geology at the site generally consists of stratified sand and gravels. Groundwater lies approximately 53 feet

METCO DIVISION PERKIN-ELMER (Continued) **1000175687**

below the land surface and flows to the south-southwest.

Env Problem: Nature and Extent of Contamination: Based on the investigations conducted to date, the primary contaminants of concern are metals and chlorinated volatile organic compounds (solvents).Soil Soil contamination consisted of metal and polycyclic aromatic hydrocarbon (PAH) contaminants above standards. Maximum shallow surface soil sampling results reported chromium of 337 mg/kg, above the 10 mg/kg Soil Cleanup Objective (SCO); Nickel at 64 mg/kg, above the 13 mg/kg SCO. Slightly elevated arsenic, copper, iron, mercury and zinc were also present in shallow soils. Maximum subsurface soil results were reported slightly above SCOs for chromium and iron.Groundwater On-site groundwater contamination in excess of Standards, Criteria and Guidance (SCGs) was reported for 1,1,1, Trichloroethane (1,1,1,TCA) and multiple metals. The TCA was reported at 9.6 ug/l and slightly exceeded the SCG of 5 ug/l. Cadmium was reported at 9.3 ug/l and slightly exceeded the SCG of 5 ug/l; chromium was reported at 2190 ug/l and exceeded the SCG of 50 ug/l; copper at 723 ug/l exceeded the SCG of 200 ug/l; lead was reported at 340 ug/l above the 25 ug/l SCG; nickel was reported at 467 ug/l above the 100 ug/l SCG; and thallium was estimated at 6.4 above the SCG of 0.5 ug/l. Potassium, iron, manganese, sodium and selenium also had results above SCGs.Soil Vapor & Indoor Air Tetrachloroethene (PCE), Trichloroethene (TCE), Trichlorofluromethane, Methylene Chloride, Acetone and 1,1,1 TCA were detected in on-site soil vapor. The maximum PCE was reported at 876 ug/m3, maximum TCE at 1461 ug/m3, maximum Trichlorofluromethane at 400 ug/m3, maximum Methylene Chloride at 647 ug/m3, maximum Acetone at 202 ug/m3 and 1,1,1 TCA at 5205 ug/m3. No sub-slab or indoor air testing has been conducted.Significant Threat: This site presents a significant environmental threat because the dissolved groundwater contamination is impacting a sole-source aquifer.

Health Problem: People are not drinking the contaminated groundwater because the area is serviced by a public water supply that obtains its water from a different source. The site is not fenced, therefore people who come onto the site may come into contact with contaminants in the soil by digging on or below the ground surface, and otherwise disturbing the soil.Volatile organic compounds in the groundwater may move into the soil vapor (air space within the soil), which in turn may move into overlaying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Based on previous soil vapor sampling, the potential for soil vapor intrusion to affect the indoor air quality of the on-site building exists. The NYSDOH has insufficient information to determine whether soil vapor intrusion is a concern for off-site buildings.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: The Hercules Machine site is located in a urban portion of Nassau county, NY. The site address is 550 West John Street, Hicksville.The predominant feature is a building that occupies roughly a third of the site. There is a parking lot and paved area that occupies the remaining area. The current operations at the site are believed to be related to washing machine repair. The surrounding properties are current or former hazardous waste sites. There are impacted municipal wells downgradient of this site. There is a golf course on the northern border of this site. No previous investigations are known to have taken place. A State Funded site characterization has generated a records report for this site. It has been determined that the site does not qualify for listing on the registry.
Env Problem: A records search report has been evaluated by the Department. The site has been classified as N. No further investigation is planned at this time.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Corrective Action Summary:
Event date: 01/16/1990
Event: Stabilization Measures Implemented, Primary measure is source removal and/or treatment (e.g., soil or waste excavation, in-situ soil treatment, off-site treatment).

Event date: 01/16/1990
Event: RFA Determination Of Need For An RFI, RFI is Necessary;

Event date: 01/16/1990
Event: RFI Imposition

Event date: 01/30/1990
Event: RFI Workplan Approved

FORMER GENERAL INSTRUMENT CORPORATION (Continued) **1000212438**

Event date: 01/30/1994
Event: CA610

Event date: 04/30/1994
Event: Stabilization Construction Completed

Event date: 04/03/1995
Event: RFA Completed

Event date: 05/12/1995
Event: RFA Determination Of Need For An RFI, RFI is Necessary;

Event date: 08/22/1996
Event: CA Prioritization, Facility or area was assigned a medium corrective action priority.

Event date: 09/27/1996
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity because of a lack of technical data. An evaluation has been completed, but further data is necessary to determine stabilization measures, feasibility or appropriateness. This status should be changed when data becomes available.

Event date: 09/27/1996
Event: Stabilization Measures Evaluation,This facility is amenable to stabilization activity based on the status of corrective action work at the facility, technical factors, the degree of risk, timing considerations and administrative considerations.

Event date: 03/30/1997
Event: CA610

Event date: 03/30/1997
Event: RFI Approved

Event date: 05/30/1997
Event: Stabilization Construction Completed

Program: HW
Site Code: 57499
Classification: Significant threat to the public health or environment - action required.
Region: 1
Acres: 11.5
HW Code: 130020
Record Add: 11/18/1999
Record Upd: 04/25/2016
Updated By: GTBOBERS
Site Description: Location: The General Instrument Site is located in an industrial and suburban portion of Nassau County, New York. The site occupies 11.5 acres at the northeast corner of the intersection of West John Street and Cantiague Rock Road in Hicksville. Site Features: The main site features include several large, abutting one- and two-story buildings surrounded by paved parking lot. Current Zoning and Land Use: The site is presently leased for commercial and light industrial uses including warehousing, distribution and manufacturing. The surrounding parcels are generally industrial and commercial use. A school is located nearby to the west of Cantiague Rock Road. The nearest residential area is about 400 feet northwest of the site. Past Use of the Site: Prior uses of a variety of solvents and acids during the production of microelectronic components have led to site and groundwater contamination. The effluent from production was discharged into a waste lagoon and drywells. During 1985, the on-site waste lagoon area was partially remediated under the oversight of the Nassau County Dept. of Health. Liquid waste, sludge and shallow soils were removed from the lagoon. Operable Units: The site is divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) is on-site soils and source areas while OU2 consists of contaminated groundwater. Additional investigation activities for OU2 are being managed by USEPA under Site No. 130215.Site Geology and Hydrogeology: The geology at the site generally consists of stratified sand and gravels. The depth to water is about 60 feet below the land surface. The groundwater generally flows in a southerly direction.
Env Problem: Nature and Extent of Contamination: For OU1; On-site SoilsBased upon investigations conducted to date, the primary contaminants of concern for OU1 included chlorinated and petroleum volatile organic compounds (VOCs), including tetrachloroethene, trichloroethene, 1,2-dichlorobenzene, ethylbenzene, xylene, vinyl chloride and other breakdown products. Soil- Contaminants of concern were present in the waste lagoon area soils and sludge, and in on-site soils in other areas, above standards and guidance values.Groundwater- On-site groundwater has been contaminated with chlorinated and petroleum volatile organic compounds (VOCs). The primary contaminants of concern include tetrachloroethene, trichloroethene, dichlorobenzene, ethylbenzene, xylene, vinyl chloride and other breakdown products. Groundwater standards have been exceeded. Continuing investigations indicate a plume of groundwater contamination has migrated off-site and extends generally south beyond the property border and beyond Old

FORMER GENERAL INSTRUMENT CORPORATION (Continued) **1000212438**

	Country Road.Soil Vapor and Indoor Air- Soil vapor contamination was present in areas of shallow contaminated water and/or contaminated soil. On-site soil vapor contamination has been addressed during remediation by excavation and Soil Vapor Extraction (SVE).For OU2; GroundwaterGroundwater: The primary contaminants of concern for OU2 include chlorinated and petroleum volatile organic compounds (VOCs), including tetrachloroethene, trichloroethene, dichlorobenzene, ethylbenzene, xylene, vinyl chloride and other breakdown products. Groundwater standards have been exceeded.
Health Problem:	Soil contamination is beneath buildings or pavement and dermal exposures are unlikely. Exposures to site-related contaminants in groundwater are not expected since the area is served by public water. Industrial and monitoring wells downgradient of the site are contaminated with volatile organic compounds (VOCs). The Hicksville Plant 5 supply wells one mile downgradient of the site treat raw water to remove low levels of VOC contamination.The water is monitored routinely to verify compliance with New York State drinking water standards. Recent monitoring near an outpost well detected part per million levels of VOCs in groundwater near the Plant 5 supply wells. Increasing VOC contaminant levels in the Plant 5 raw water are prompting the upgrade of the current treatment system to handle the impending plume. This Record Modified by TEB04 on 3/31/2010.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Classification: Conditionally Exempt Small Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: U002
. Waste name: 2-PROPANONE (I) (OR) ACETONE (I)

Facility Has Received Notices of Violations:

SHWS:
Program: HW
Site Code: 55771
Classification: C
Region: 1
Acres: 0.25
HW Code: 130038
Record Add: 11/18/1999
Record Upd: 12/27/2007
Updated By: JBSWARTO
Site Description: This site was listed as a dried up lagoon approx. 30 ft. x 50 ft., where industrial wastes were discharged over several years. Piles of fiberglass wastes, contaminated with dimethyl phthalate, are located on property immediately adjacent to it. Depew manufacturing sold the property in 1986. The new owner excavated the lagoon and stored the contents in an on-site building. Subsequently, some of the waste was transported to certified landfills. A Phase I was completed in 1988. A preliminary site assessment was completed in 1992. No hazardous wastes were found. PCBs were found near the upgradient boundary, but below 50 ppm.
Env Problem: No environmental problems exist related to hazardous waste disposal. PBCs were found in site soils.
Health Problem: The area around this site is supplied with public water, although commercial/industrial supply wells for non-potable uses have been identified nearby. No contamination of the known private or public water supply wells in the area has been attributed to this site. The site owner performed a removal action which removed all hazardous waste from the site facility. Potential contact with any contaminants which may remain in on-site soil is not expected since a substantial portion of the site is paved and public access is restricted. The site was removed from the registry of inactive hazardous waste sites of New York State and no human exposures are expected.

SYLVANIA ELECTRIC PRODUCTS FACIL FORMERLY (VERIZON CURRENTLY (Continued) **1000133377**

Site Code: 57469
Classification: Site is properly closed - requires continued management.
Region: 1
Acres: 5
HW Code: 130040
Record Add: 11/18/1999
Record Upd: 04/25/2016
Updated By: GTBOBERS
Site Description: Location: The Air Techniques (Old Sylvania) site is about 5 acres in size and located in a suburban area of Nassau County. The site is located along Cantiague Rock Road just north of West John Street in Hicksville. Site Features: The site is comprised of three properties with the addresses of 70, 100 & 140 Cantiague Rock Road. Each property contains one large building with mostly paved areas surrounding each.Current Zoning: The site is currently inactive and the properties are zoned industrial. The surrounding parcels are currently a combination of industrial, commercial, municipal, community, recreational, school and residential. The nearest residential area is 600 ft to the west.Past Use of the Site: 70 Cantiague Rock Road parcel was occupied by a manufacturer of dental equipment from 1979 to 2006. During that period, buried drums containing waste chlorinated solvents consisting primarily of tetrachloroethene were discovered in 1986 and were removed in 1987. After some additional investigation activities conducted between 1992 and 1994, additional parcels north and upgradient of 70 Cantiague Rock Road were evaluated. It was discovered that the 70, 100, and 140 Cantiague Rock Road parcels had all been used for the production of uranium and thorium fuel elements in the 1950s and 1960s by Sylvania. Portions of this nuclear fuel work was done for the US government under federal contract. Uranium, thorium, tetrachloroethene, and nickel present in the processing waste had been discharged to recharge basins and leaching pools. The site entered the Voluntary Cleanup Program in April 1999 and was assigned Site No. V00089. In 2014, additional investigation activities were conducted and work continues to be managed under Site No. 130215 which is managed by USEPA.Site Geology and Hydrogeology: Groundwater is located about 60 feet below grade and flows in a southerly direction. The area soils are mainly sands with varying layers consisting of silt, sands and gravel.
Env Problem: Nature and Extent of Contamination:Soils:Investigations have been conducted to determine the extent of soil contamination. During 2003 through 2005, soils contaminated with uranium, thorium, tetrachloroethene, and/or nickel were excavated to depths up to 54 feet deep resulting in about 58,000 cubic yards of waste. The generated waste was disposed off-site in Utah. Soil contamination remains on-site at depth and under existing buildings. Soil Vapor and Indoor Air:Soil vapor contamination is present in shallow soils and under buildings over various portion of the site. Groundwater:Numerous investigations have been conducted to determine the extent of contamination in groundwater. Groundwater standards have been exceeded both on- and off-site. The primary contaminants of concern include tetrachloroethene, trichloroethene, and their breakdown products. Continuing investigations indicate a plume of groundwater contamination has migrated off-site and extends generally south beyond the property border.
Health Problem: Since some contaminated soils remain at the site below concrete or clean fill, people will not come in contact with contaminated soils

SYLVANIA ELECTRIC PRODUCTS FACIL FORMERLY (VERIZON CURRENTLY (Continued) **1000133377**

unless they dig below the surface materials. People are not drinking contaminated groundwater because the public water supply that serves the area is treated to remove contaminants before the water is distributed to customers. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Currently, there are no occupied buildings at the site, therefore, soil vapor intrusion does not represent a current concern. However, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and /or current site building re-occupancy.

Registry ID: 110000324088

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

HAZARDOUS WASTE BIENNIAL REPORTER

SUPERFUND (NON-NPL)

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.
