RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System
New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

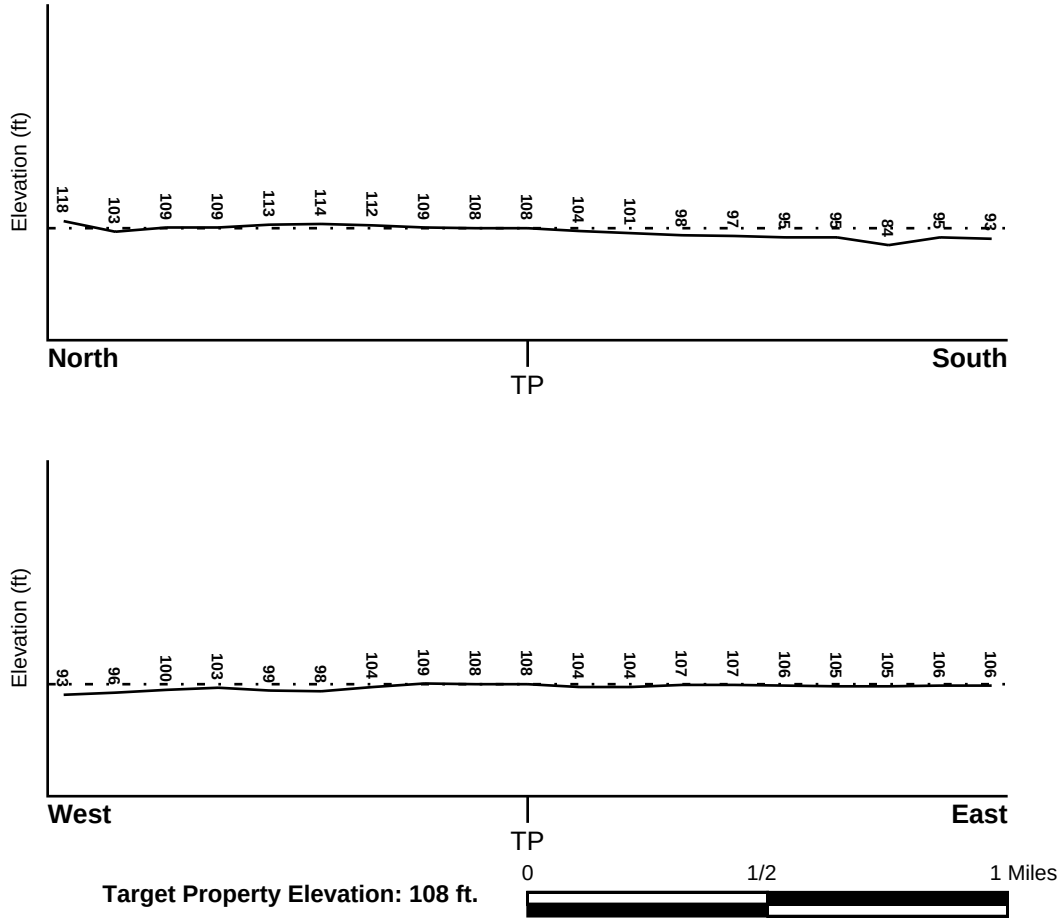
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
36059C0207F	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
36059C0138F	FEMA Q3 Flood data
36059C0119F	FEMA Q3 Flood data
36059C0206F	FEMA Q3 Flood data
36059C0226F	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LYNBROOK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile North
Site Name:	Fumex Sanitation, Inc.
Site EPA ID Number:	NYD044476836
Surficial Aquifer Flow Dir.:	Southwest
Inferred Depth to Water:	approximately 47 feet.
Hydraulic Connection:	The surficial aquifer and underlying aquifer are hydraulically connected.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX C

FREEDOM OF INFORMATION ACT/LAW REQUESTS/RESPONSES & PROPERTY CARDS

Incorporated Village of Mineola
Office of the Village Clerk
Public Records Officer

APPLICATION TO VIEW PUBLIC RECORDS

Pursuant to New York State "Freedom of Information Law," (Laws of 1974, Chapters 578, 579, 580) adopted by resolution of the Board of Trustees of the Incorporated Village of Mineola on October 11, 1974.

The undersigned, which appears here in person, wishes to examine the following Official Records Describe below the records you wish to examine, giving identifying details:

Bulk Storage, Petroleum or Chemical Storage Tanks, Above ground storage tanks, Underground Storage Tanks, Pad or Pole mounted Transformers, Structure Plans / Blueprints

PLEASE NOTE: Address 161 2nd Street, Mineola, NY

Section 175.25 Penal Law: "Tampering with public records in the first degree."

A person is guilty of tampering with public records in the first degree, when knowing that he does not have the authority of anyone entitled to grant it, and with intent to defraud, he knowingly removes, mutilates, destroys, conceals, makes a false entry in or falsely alters any record or other written instrument filed with, deposited in, or otherwise consulting a record of public office or public servant.

Tampering with public records in the first degree is a class D felony, L.1965, c.1030, effective September 1, 1967.

Section 175.20 Penal Law: "Tampering with public records in the second degree."

A person guilty of tampering with public records in the second degree, when knowing that he does not have the authority of anyone entitled to grant it, he knowingly removes, mutilates, destroys, conceals, makes a false entry in or falsely alters any record or other written instrument filed with, deposited in, or otherwise constituting a record of public officer or public servant.

Tampering with public records in the second degree is a Class A misdemeanor, L.1965, c.1030, effective September 1, 1967.

A fee of $ .25 *per page* for copies will be charged to the applicant and is payable by cash or check issued to the Inc. Village of Mineola.

Map Panels

- Digital Data
- Unmodernized Maps
- Unmapped

This map complies with FEMA's standards for the use of digital flood maps. The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. The base map shown complies with FEMA's base map accuracy standards.

The NFHL is a living database, updated daily, and this map represents a snapshot of information at a specific time.

Flood risks are dynamic and can change frequently due to a variety of factors, including weather patterns, erosion, and new development. FEMA flood maps are continually updated through a variety of processes. Users should always verify through the Map Service Center (http://msc.fema.gov) or the Community Map Repository that they have the current effective information.

NFHL maps should not be created for unmapped or unmodernized areas.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Matrix New World Eng.,Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E 2600).

AQUIFLOW®

Search Radius: 0.333 Mile.

No Aquiflow sites reported.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported
Hydric Status:	Hydric Status: Soil does not meet the requirements for a hydric soil.
Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

Soil Layer Information

	Boundary			Classification			
Layer	**Upper**	**Lower**	**Soil Texture Class**	**AASHTO Group**	**Unified Soil**	**Permeability Rate (in/hr)**	**Soil Reaction (pH)**
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

EXECUTIVE SUMMARY

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:	silt loam loamy sand sandy loam fine sandy loam
Surficial Soil Types:	silt loam loamy sand sandy loam fine sandy loam
Shallow Soil Types:	sandy loam
Deeper Soil Types:	unweathered bedrock very gravelly - loamy sand stratified sandy loam

EXECUTIVE SUMMARY

SEARCH RESULTS

Unmappable (orphan) sites are not considered in the foregoing analysis.

Town:	North Hempstead
Acres:	7.54
Date Record Added:	11/30/2000
Date Record Updated:	02/02/2016
Updated By:	GTBOBERS
Site Description:	Site Location: The Long Island Rail Road (LIRR) Mineola substation site is located in a urban portion of Nassau County, NY. It is located near Front Street and Main Street in Mineola. Site Features: The main site features are the two-story brick building, transformer yard, and parking area. Current Zoning and Land Use: The site is currently zoned for transportation and used by the LIRR as a rectifying station to supply power to the rail road. The immediate areas surrounding the site are used for a mix of commercial and industrial purposes. Past Use of the Site: The site was previously used by the LIRR to convert AC to DC power to power the rail road. The historic source of contamination is mercury from rectifiers that have since been replaced. A site assessment was conducted by the LIRR in August 1999, the assessment identified mercury contamination. The LIRR entered this site into the Voluntary Cleanup Program (VCP) in 2004. Site Geology and Hydrogeology: The soil at the site consists of primarily sand to a depth of several hundred feet. Bedrock is encountered at greater depths. The groundwater is approximately 40

MINEOLA G16 (LIRR), MAIN STREET & FRONT STREET, MINEOLA, NY 11501 (Continued)

	feet below grade.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminant of concern was mercury.
Health Problem:	A fence limits access to the site so the public is unlikely to come in contact with surface contaminants, if present. The public is not likely to be drinking contaminated groundwater since public water serves the area and there are no known users of private well water nearby.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NCDPW, 240 OLD COUNTRY ROAD, GARDEN CITY, NY (Continued)

516-903-1026. As per John, the diesel tank is connected to a generator. The vent pipe was cracked. When repaired, there was no evidence of contaminated soil. The tank passed a re-test. The #2 fuel oil tank is hooked up to the heating system. That tank had a cracked fitting on the vent pipe. When repaired, no evidence of contaminated soil was identified. The tank also passed a re-test. No further action."

DEC Memo:	"01/23/14 1140 Hrs: Left message for Lotito. DR 01/23/14 1320 Hrs

COUNTY BUILDING, 400 COUNTY SEAT DRIVE, MINEOLA, NY (Continued)

(A): Lotito called- he said they suspect the petrometer is the cause of the test failure, 'and if this is the tank they believe it is, it was installed in 1971 and will probably be removed.' 01/23/14 1320 Hrs (B): DEC directed him to contact HC with any questions. DR 2/7/14 FILE REASSIGNED Approx. 60 cu. yards of #2 oil contaminated soil has been removed along with 1,000 UST removal. Excavation stopped at ~15' below the grade due to structural concerns of nearby building. ~100 ppp by PID meter soil sample on the bottom. Sub-surface investigation requested. 02-07-14 @8:00 Geo Probe rig mobilized on site. Two bores on the previous location of the tank made. PID meter field screening used. vertical spreading of petroleum undetected at ~27' below the grade in both bores. Ground water level has been reached at ~45' b.g. and appeared to be not affected. It has been assumed that minimal petroleum related contaminants left on the bottom of the excavation will be naturally attenuated before any impact to the ground water. Cleanup has been completed, no further action required.(VP)"

RMP: Risk Management Plans
Standard Environmental Record Source: Other Records
Search Distance: Property

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

E DESIGNATION: E DESIGNATION SITE LISTING
Standard Environmental Record Source: Other Records
Search Distance: Property

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

ERP: Environmental Restoration Program Listing

Standard Environmental Record Source: State and tribal Brownfields sites

Search Distance: 0.333 Mile

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

HIST SPILLS: SPILLS Database

Standard Environmental Record Source: Other Records

Search Distance: Property

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

Standard Environmental Record Source: Other Records

Search Distance: 0.333 Mile

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

2020 COR ACTION: 2020 Corrective Action Program List

Standard Environmental Record Source: Other Records
Search Distance: 0.25 Mile

RECORD SOURCES AND CURRENCY

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST
Standard Environmental Record Source: Other Records
Search Distance: Property

RECORD SOURCES AND CURRENCY

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

Standard Environmental Record Source: Other Records

Search Distance: Property

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

Standard Environmental Record Source: Other Records

Search Distance: Property

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

SEMS: Superfund Enterprise Management System

Standard Environmental Record Source: Federal CERCLIS list

Search Distance: 0.333 Mile

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

Standard Environmental Record Source: Other Records

Search Distance: 0.333 Mile

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

UMTRA: Uranium Mill Tailings Sites

Standard Environmental Record Source: Other Records
Search Distance: 0.333 Mile

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US BROWNFIELDS: A Listing of Brownfields Sites

Standard Environmental Record Source: Other Records
Search Distance: 0.333 Mile

RECORD SOURCES AND CURRENCY

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

Standard Environmental Record Source: Other Records

Search Distance: Property

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

Standard Environmental Record Source: Historical Gas Stations

Search Distance: 0.125 Mile

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR MGP: EDR Proprietary Manufactured Gas Plants

Standard Environmental Record Source: Former Manufactured Gas Plants

Search Distance: 0.333 Mile

RECORD SOURCES AND CURRENCY

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

RECORD SOURCES AND CURRENCY

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5' minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW® Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW® Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services. The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Engineering Progress

Matrix New World Engineering
Prospective Landowner And/Or User Questionnaire

Subject Property Name:	Mineola Parking Lot on Second Street
Subject Property Address:	161-163 Second Street, Mineola

QUESTION	YES	NO	UNK?
1. Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property?		X	
2. Are you are aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the subject property?		X	
3. Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?		X	
4. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?			X
5. Are you aware of any activity use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?			X
6. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants?		X	
7. Are you aware of commonly known or reasonably ascertainable information about the property? For example: Do you know the past uses of the property?		X	
8. Do you know specific chemicals that are present or once were present at the property?		X	
9. Do you know of spills or other chemical releases that have taken place at the property?		X	
10. Do you know of environmental cleanups that have taken place at the property?		X	
11. Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?			X
12. Has a title search been performed? If yes, please attach.			X
13. Is the property or has the property been used as a gasoline station, motor repair facility, commercial printing, dry cleaners, photo developing, landfill, industrial use, waste treatment or disposal facility?			X
14. Are there currently any damaged or discarded automotive or industrial batteries, pesticides, paints, or other chemicals at the subject property?			X
15. Are there currently any industrial drums or chemicals at the subject property?			X
16. Are you aware of contaminated fill at the subject property? (i.e. Fill dirt from off-site.)			X
17. Are there currently any pits, ponds, or lagoons in connection with waste disposal or treatment at the subject property?			X
18. Are there any current or previous underground storage tanks or aboveground storage tanks at the subject property?			X
19. Are there currently any vent pipes, fill pipes, or access ways protruding from the ground at the subject property?			X
20. Is the subject property served by a private well and or a private septic system?			X
21. Does the property discharge industrial wastewater (excluding sanitary sewer)?			X
22. Are there any monitoring wells at the subject property?

Re: PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT
THIRD AVENUE PARKING LOT
THIRD AVENUE/MINOLA BOULEVARD
SECTION 9, BLOCK 414, LOTS 18, 318, 319, 320
VILLAGE OF MINEOLA, NASSUA COUNTY, NEW JERSEY
MATRIX NO. 16-144

Dear Mr. Aksman:

Matrix New World Engineering (Matrix) is pleased to present this Phase I Environmental Site Assessment (ESA) Report for the above referenced site.

This report summarizes the findings of the site reconnaissance, the review of historic and current uses of the site to identify contamination by hazardous substances or waste, the review of governmental databases, and the review of other pertinent data. No sampling or laboratory analysis of any media was performed as part of this Phase I ESA. As a result of the Phase I ESA, one Recognized Environmental Condition (REC) was identified on the site.

If you have any questions regarding the information contained in this report, please contact us at (973) 240-1800.

Sincerely,

Brian Crespi
Project Manager

Mindy Chassin Horowitz
Program Director

1.0 SUMMARY

Matrix New World Engineering, Land Surveying and Landscape Architecture, P.C. (Matrix) was retained by Gannett Fleming–AECOM Rail Road Expansion Partnership, a Joint Venture between Gannett Fleming Engineers and Architects, PC and AECOM USA, Inc. (the "JV") to provide environmental services to the Metropolitan Transportation Authority (MTA) and Long Island Rail Road (LIRR) in support of the proposed installation of a third track, railway grade crossing separations and/or closures and infrastructure improvements between the Floral Park Station and the Hicksville Station, known as the "LIRR Expansion Project".

As part of the project, Matrix has been retained to complete a Phase I Environmental Site Assessment (ESA) for village-owned parking lot located between 3rd Avenue and Mineola Boulevard (Section 9, Block 18, Lots 318-320), in the Village of Mineola, Nassau County, New York (Site), to be acquired as part of the project. The Phase I ESA has been performed in accordance with Attachment B of the LIRR's Technical Scope of Work (TSOW) for the LIRR Expansion Project from Floral Park to Hicksville (January 2016). The purpose of the Phase I ESA is to gather information to be used in the acquisition process. This Phase I ESA has been prepared in general accordance with the American Society for Testing and Materials (ASTM) Designation E 1527-13 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and ASTM Designation E 2600-15 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions.* The following report summarizes the conclusions and opinions representing Matrix's best professional judgment based on information obtained during the Phase I ESA.

1.1 Site Summary

The Village of Mineola owns and operates the subject property in the Village of Mineola, New York. The approximately 0.94 acres (41,257 square-foot) site is used as a parking lot and does not contain any structures. A multi-level parking garage occupied the western portion of the Site beginning as late at 1976 until at least 2006, after which the garage was removed and the full site became a surface lot. The entire Site has been identified as a parking facility since at least 1970, before which the northern portion of the Site was occupied by residential homes dating back to at least 1925. The southern portion has been developed as a surface parking lot since at least 1962, and before that was undeveloped.

1.2 Recognized Environmental Conditions

Matrix performed a Phase I ESA of the site at 3rd Avenue in the Village of Mineola, Nassau County, New York in general conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 8.0 of this report. This assessment has revealed one REC in connection with the site:

- Vapor Encroachment Condition (VEC): A Tier 1 Vapor Encroachment Screen (VES) was completed by Matrix using EDR's Vapor Encroachment Screen Worksheet. Based on available information, a potential VEC was identified at the Site. Please see Section 4.5 below for further discussion on the Tier 1 VES.

1.3 Controlled RECs

Controlled Recognized Environmental Conditions (CRECs) are recognized environmental conditions resulting from a past release of hazardous substances or petroleum products that have been addressed to the satisfaction of the applicable regulatory authority with hazardous substance or petroleum products allowed to remain in place subject to the implementation of required controls. No CRECs have been identified for the Site.

1.4 Historical RECs

Historical Recognized Environmental Conditions (HRECs) are recognized environmental conditions resulting from a past release of hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the property to any required controls. No HRECs were identified for the Site. Matrix did not identify any HRECs, as defined by the ASTM Standard.

1.5 De Minimis Conditions

No *de minimis* conditions were observed or identified through interviews or records review of current or historical uses of the Site and adjoining properties.

1.6 Other Findings

The term "other finding" is not defined by ASTM; rather, Matrix uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard. Although not a considered REC based on currently available information, Matrix identified the following other findings based on review of the regulatory databases and through the Site reconnaissance. Sites within 0.1 miles of the Site and at a higher elevation were determined to have the potential to impact the Site should a spill have occurred. These facilities were not identified on any other databases and there are no records of spills or other known sources of contamination from these facilities.

- 212 Realty is located at 134 Mineola Boulevard, 0.032 miles east and at a higher elevation relative to the Site. This facility had a UST removed on February 28, 1995. No other tank closure information was provided. Based on this information, there is potential for impact to the site should a release have occurred.

- Boulevard Towers, located at 190 1st Street, was identified at a higher elevation relative to the Site. This facility had a UST installed in June of 1995. No other information was provided for this facility. The facility is also listed on LTANKS and based the proximity and upgradient direction from the site, there is potential for impact to the Site should a release have occurred.

- Winthrop University Hospital is located at 222 Station Plaza, 0.087 miles south and at a higher elevation relative to the Site. This facility had USTs removed on July 31, 1991, August 1, 1991, and May 3, 1994. No other tank closure information was provided. This facility currently has two active USTs that were installed on December 12, 2007. This facility is also identified in RCRA-CESQG, NY AST and NY Manifest databases. Based on the proximity and upgradient direction from the site, there is potential for impact to the Site should a release have occurred.

- A filling station was shown on historic Sanborn maps at the northeast corner of Mineola Ave and 1st St from 1950 to at least 1970. Based on the proximity to the Site, there is potential for impact to the Site, should a release have occurred.

- Heritage House, at 135 3rd Avenue, 0.017 miles west (across 3rd Avenue) of the Site and at a higher elevation relative to the Site. Spill No. 9401816 was opened due to tank test failure with a release of No. 4 fuel oil on May 6, 1994. The spill case was closed on January 29, 2004. Due to the proximity and duration of the spill case, this facility is classified as a REC.

- A dry cleaner was shown at the southwest corner of 2nd Street and Mineola Ave, in the 1970 Sanborn map. This facility was not identified in the historical dry cleaner database search. Based on the proximity to the Site, there is potential for impact to the Site should a release have occurred.

- A historic dry cleaning facility was identified on the HIST DRYCLEANERS database, located at 246 Cleveland Ave, at higher elevation and identified as J&A Cleaning Inc in 2007, 2008 and 2012. Based on the proximity to the Site, there is potential for impact to the Site, should a release have occurred.

- Winthrop University Hospital, located at 259 1st Street, 0.052 miles southwest and at higher elevation relative to the Site. This facility is identified on several databases, including AST, UST, LTANKS, NY SPILLS, LQG, NY MANIFEST and NJ MANIFEST. Based on the spill history, and large-quantity generator status, along with the proximity and the upgradient setting of the facility, the hospital is considered a REC. Further information from the databases are presented on the following page.

- Ten ASTs are currently in-service at this facility: Tank 0050 is a 3,720-gallon No. 2 fuel oil AST; Tanks 0045, 0044, 0046, and 0049 are 240-gallon No. 2 fuel oil ASTs; Tank 0048 is a 280-gallon is a No. 2 fuel oil AST; and Tanks 0018, 0030, 0040 and 0042 are 275-gallon No. 2 fuel oil ASTs. No violations were identified in relation to the ASTs.
- The facility is listed on the UST database but no further information is provided.
- The facility is identified on the LQG databases as a historical generator of ignitable waste (D001), selenium (D010), spent nonhalogenated solvents (F003), warfarin & Salts (P001), arsenic oxide (P012), nicotine (P075), mitomycin C (U010), chlorambucil (U035), cyclophosphamide (U058), daunomycin (U059), melphalan (U150), phenol (U188), selenium sulfide (U205), streptozotocin (U206), barium (D005), chromium (D007), mercury (D009), silver (D022), m-cresol (D024), and undefined (D000). Additionally, this facility has been identified with following violations: records/reporting, pre-transport, TSD IS-Preparedness and preventions, and state statute. All cases associated with the violations have been satisfied or closed.
- The facility is listed on NY SPILLS for two historical spill cases, which are also summarized in the LTANKS listing:
  - Spill No. 9704765 was assigned for a release of 20-gallons of petroleum occurred due to equipment failure on July 21, 1997. Corrective action was taken and the spill was closed September 11, 1997.
  - Spill No. 8807720 was assigned for a release of approximately 1-gallon of non-PCB oil due to equipment failure on December 20, 1998. Corrective action was taken and the spill was closed on December 22, 1998.

1.7 Significant Data Gaps

- To date, a response to the FOIL and OPRA requests submitted to Village of Mineola Clerk, Nassau County Clerk, Nassau County Fire Department, and the EPA have not been received. A response from these agencies will be forwarded upon receipt with recommendations, if necessary.
- A response from the NYSDEC was received requiring additional information, which Matrix provided. A second response had not been received at the time of this report.
- An interview with personnel from the Town of Mineola was not completed and a request to Tom Rini, Superintendent, has not been returned.

- No exact address was given to Matrix from the client and so publicly available mapping services were used to determine the address. The potential addresses for this Site are 126 – 150 3rd Avenue (west side of the parking lot).

- The entirety of the Site was inspected during Matrix's walkthrough, though most of the Site was covered by parked cars, limiting a complete inspection.

1.8 Non-scope Considerations

Matrix did not identify any non-scope considerations.

2.0 INTRODUCTION

2.1 Purpose

This Phase I ESA Report has been prepared by Matrix for the JV for the village-owned parking lot located between 3rd Avenue and Mineola Boulevard (Section 9, Block 18, Lots 318-320), in the Village of Mineola, Nassau County, New York (Site), to be acquired as part of the LIRR Expansion Project. The objective of the Phase I ESA is to evaluate whether current or historical practices associated with the Site or nearby properties have the potential to have created, or to create in the future, a Recognized Environmental Condition (REC) at the Site. The term REC is defined by ASTM Standard 1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on or at a property due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The Phase I ESA will also identify Controlled Recognized Environmental Conditions (CRECs) in connection with the Site. The term CREC is defined by ASTM Standard 1527-13 as a REC resulting from a past release of hazardous substances or petroleum products that have been addressed to the satisfaction of the applicable regulatory authority with hazardous substance or petroleum products allowed to remain in place subject to the implementation of required controls. Additionally, the Phase I ESA will identify any Historical Recognized Environmental Conditions (HRECs), which are defined by ASTM Standard 1527-13 as RECs resulting from a past release of hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the property to any required controls.

2.2 Detailed Scope-of-Services

The scope of services for this project included a visual reconnaissance of the Site and neighboring properties; review of readily available Federal, state, and local regulatory records; examination of historic information and evaluation of current and past operations and activities on-site. Matrix reviewed/utilized historic aerial photographs, Sanborn Fire Insurance Maps, historic topographic maps and city directories as part of the Phase I ESA. Additionally, a regulatory database search was conducted by Environmental Data Resources Inc. (EDR), of Shelton, Connecticut for information available in governmental databases. The EDR Radius Map Report is provided in Appendix A.

The Phase I ESA also included an initial vapor encroachment screening (VES) to determine if there is a potential for vapors to occur in the subsurface below existing and/or proposed on-site structures from those hazardous substances, petroleum and petroleum products that consist of volatile organic compounds (VOC), semi-volatile organic compounds (SVOC) and inorganic volatile compounds. The VES meets the Tier 1 “non-invasive” screening requirements of ASTM E2600-15.

2.3 Significant Assumptions

Information and records provided by the client, government agencies, and outside vendors retained by Matrix are assumed to be correct and complete.

2.4 Limitations and Exceptions

This Phase I ESA has been prepared for the exclusive use of LIRR. It represents a professional opinion and judgment based on information supplied by the present owner of the Site, information collected by Matrix, and additional data and information provided by governmental agencies. Matrix only warrants that it provides services in accordance with generally-accepted practices in the engineering/environmental site assessment field. No other warranty or representation, either expressed or implied, is included or intended as part of its services, proposals, contracts, or reports. Matrix cannot guarantee, certify, or warrant that the Site is, or is not, free of environmental impairment/liabilities without conducting a site-specific subsurface investigation involving soil and groundwater laboratory analyses. Even with such a program, the data and samples from any given soil boring or monitoring well will indicate conditions that exist only at that location, and may not necessarily apply to the Site as a whole.

In preparing this report, Matrix has relied on certain information provided by Federal, state, and local officials and other parties referenced herein, and on file of government agencies and others that were readily available at the time of this assessment. Although there may have been overlap of this information provided by these various sources, Matrix did not attempt to independently verify the accuracy or completeness of information reviewed or received during the course of this Phase I ESA.

Observations were made on all portions of the Site as indicated in the report.

As part of this assessment, Matrix submitted requests for information via the Freedom of Information Act (FOIA) to various governmental agencies. As of the preparation of this report, these requests may not have been fulfilled. The conclusions of this report are subject to change upon receipt of a response from these FOIA and OPRA requests.

Mold, indoor air quality, asbestos, and lead-based paint surveys are excluded from the scope of this report.

2.5 Special Terms and Conditions

There are no special terms or conditions to the content of the report that are in addition to the scope outlined in Section 2.2.

2.6 User Reliance

This Phase I ESA was performed at the client's request utilizing a format consistent with the table of contents and report format specified in ASTM E 1527-13 Appendix X4.

This assessment is intended, where applicable to the standard of care, to satisfy the requirements of the ASTM Standard Practice for Environmental Site Assessments, as published in ASTM E1527-13. The independent conclusions represent the best professional judgment of the Environmental Professional based on the conditions that existed and the information and data available to Matrix during the course of this assignment. Factual information regarding operations and conditions provided by the Client, owner, or the representative has been assumed to be correct and complete. The report may be distributed and relied upon by MTA, LIRR, and the JV. Reliance on the information and conclusions presented in this report by other party(ies) is not authorized by Matrix, unless specifically stated.

3.0 SITE DESCRIPTION

On March 13, 2017, Christiana Seiffer, Environmental Scientist of Matrix, conducted a Site reconnaissance visit to evaluate current land usage and identify any RECs that may be present throughout accessible portions of the Site and surrounding areas. Appendix B contains photographs taken during the site reconnaissance.

3.1 Location and Legal Description

The Site is located between on 3rd Avenue between Harrison Avenue and 1st Street, Village of Mineola, Nassau County, New York. The Site consists of four parcels (Section 9, Block 414, Lots 18, 318, 319 and 320) which together comprise one large asphalt-paved parking lot.

The Site area is approximately 0.94 (41, 257 square feet). The Site is geographically located at 40° 44' 32.61" north latitude and 73° 38' 30.22" west longitude and is depicted on the Hicksville, New York, U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle. A Regional Location Map and Topographic Map depicting the Site are presented as Figures 1 and 2, respectively. A Tax Map is presented as Figure 3. A Site Plan map is presented as Figure 4.

3.2 Site General Characteristics

The entirety of the Site is used as a parking lot.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map (Hicksville, New York, 2013); Google Earth	The elevation of the Site is approximately 111 feet above mean sea level (amsl) at the northeast, northwest and southwest corners and 109 feet amsl at the southeast corner.
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on-site, with a gentle downward slope to the southeast. Regional topography slopes gently downward to the south toward various Bays and outlets into the Atlantic Ocean.
Hydrology		
Surface Water Runoff	Visual observations	Enters catch basins that discharge to the municipal storm sewer system that is located in the northern-central and southern-central portion of the Site.
Nearest Surface Water Body to the Site	Google Earth; Visual observations	An undefined pond near Mineola Public Library is located approximately 0.24 miles to the northwest at its nearest point. Larger bodies of water, and eventually the Atlantic Ocean, are located far the south of the Site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Flood Plain	FEMA*	Facility personnel reported no known occurrences of flooding at the site. The site is not located within a 500-year flood zone. The FEMA Flood Insurance Rate Map (FIRM) is included in Appendix J.
Wetlands	NWI*; Visual observations	There are no federally-designated wetlands on-site, and Matrix did not identify any obvious suspected wetlands at the site during the site visit.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map	Based on the topographic gradient and the relative direction of the Atlantic Ocean, shallow groundwater likely flows to the south/southwest.
Depth to Groundwater	UGSG	Specific information regarding depth to shallow groundwater was not readily available, but is expected to be at least 43 feet below ground surface, based on the USGS Long Island Depth to Groundwater Viewer[1]
On-site Wells	Visual observations	There are no production, monitoring, or injection wells on-site.
Nearest Groundwater Supply Wells	EDR database report	There are no federally registered public groundwater supply wells within a one-mile radius of the Site.
Geologic Conditions	USDA Natural Resource Conservation Service Web Soil Survey	Regional soils are identified as Urban Land which generally consists of well drained, silty clay loams and stratified-gravelly sands with moderately high infiltration rates. The Site is located within the Monmouth/Matawan Group and Magothy Formation dating from the Upper Cretaceous.
Site Utility Information		
Heating and Cooling Equipment	Visual observations	There are no interior areas and thus no heating or cooling equipment associated with the Site.
Electricity Supplier	Facility personnel	There is no electrical service at the Site.
Natural Gas Supplier	Visual observations	N/A; there is no natural gas service at the Site.
Use of Fuel Oil for Building Heat	Facility personnel	No current or former use of fuel oil reported.
Water Supplier	Visual observations	There were visual observations of water supply lines onsite.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Sanitary Sewer	Visual observations	There were no sanitary sewers observed onsite. Sanitary sewer is provided by Nassau County Sewage Disposal Districts #1 and #2.
Stormwater System	Visual observations	Stormwater catch basins were observed in the southwest and northeast portions of the Site. Stormwater is handled by Nassau County Sewage Disposal District #1 and #2.
Septic Systems	Facility personnel	No current or former septic systems reported.

Notes:

FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory

* - Source was provided in the EDR database report.

1 - https://ny.water.usgs.gov/maps/li-dtw10/.

3.3 Current Use of the Property

The Site is currently owned by the Village of Mineola and is currently occupied by a parking lot.

3.4 Description of Structures, Roads, Other Improvements On-Site

The Site consists of four parcels in which consist of one large, asphalt-paved parking lot.

3.5 Current Uses of the Adjoining Properties

The property is located in a mixed residential/commercial land use area. The nearest residential areas are an apartment building west of the Site across 3rd Avenue, an apartment building south of the Site across 1st Street, and individual homes north of the site, across Harrison Avenue. Based on discussions with facility personnel, Matrix's visual observations from the property boundary and public rights-of-way, and a limited review of publicly available information, a general determination of the current use of adjacent properties was developed, as described Table 2.

Table 2: Current Use of Adjacent Properties

Direction	Property/Land Use	Matrix's Observations
North	Harrison Avenue borders the Site to the north. Residential homes with paved parking areas and apartment buildings are along Harrison Avenue. A two-story office building is located at the corner of the Harrison Avenue and Mineola Boulevard.	The only notable concern is regarding the two pole-mounted transformers on the sidewalk along Harrison Street.
East	The Site is bordered to the east by the backs of several buildings that front on Mineola Boulevard. These buildings are commercial properties with residential units above the businesses. Businesses include a pharmacy, barber shop, restaurants, office building, florist, and an eye center.	No concerns are presumed to be associated with those areas.
South	1st Street borders the Site to the south. The Town House apartment building is located directly south of the Site. Winthrop University Hospital Research and Academic Center and the LIRR Main Line are located farther south, beyond the apartments.	The only notable concern is regarding the one pole-mounted transformer on the sidewalk at the corner of 3rd Avenue and 1st Street.
West	3rd Avenue borders the Site to the west. The Heritage House apartment building with asphalt-paved parking area located to the west, with residential homes located beyond the apartments.	No concerns are presumed to be associated with those areas.

Notes:

During the site visit, Matrix walked or drove by the borders of these properties that are shared with the subject site. Matrix did not enter the neighboring properties.

3.6 Reason for Performing Phase I

Matrix was retained by the JV to perform a Phase I ESA as part of a due diligence evaluation prior to property acquisition.

3.7 Other

No additional information regarding the Site was provided.

4.0 RECORDS REVIEW

4.1 Standard Environmental Record Sources

A regulatory review of the Site and surrounding area was conducted through a search by EDR dated March 1, 2017. The review included inquiries into databases maintained by USEPA, as well as state agencies. A brief description of each database and the search results obtained during the Phase I ESA is presented below. Only those searches that returned a record within the listed search distance are included below. The EDR Radius Map Report in its entirety is attached as Appendix A. The search was conducted in general accordance with ASTM E 1527-13 standards. The Site was not identified in any of the databases searched by EDR.

DATABASE SEARCH SUMMARY

Federal Records

1. National Priority List (NPL) Database: The NPL database is also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

The Site was not identified as a NPL facility.

No NPL facilities were identified within a ½-mile radius of the Site. One NPL facility was identified between a ½-mile to 1 mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from this NPL facility. The NPL data was last updated on December 5, 2016 (EDR Inc., 2017).

2. Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP): The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

   The Site was not identified on the Delisted NPL database.

   No Delisted NPL facilities were identified within a ¼-mile radius of the Site. One Delisted NPL facility was identified between a ¼-mile and ½-mile radius of the Site. No Delisted NPL facility was identified between a ½-mile to 1 mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from the Delisted NPL facility. The Delisted NPL data was last updated on December 5, 2016 (EDR Inc, 2017).

3. Superfund Enterprise Management System (SEMS) Database: The SEMS tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies, and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

   The Site was not identified on the SEMS database.

   No SEMS facilities were identified within a ¼-mile radius of the Site. One SEMS facility was identified between a ¼-mile and ½-mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from the SEMS facility. The SEMS data was last updated on December 5, 2016 (EDR Inc, 2017).

4. Resource Conservation and Recovery Act (RCRA)-Large Quantity Generator (LQG): The RCRA-LQG database is USEPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments (HWSA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. LQGs generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. The RCRA-LQG database is administered by the EPA.

   The Site was not identified on the RCRA-LQG database.

   One RCRA-LQG facility was identified within a ⅛-mile radius of the Site. Winthrop University Hospital is located at 259 1st Street, 0.052 miles from the Site, at a higher elevation relative to the Site. Winthrop University Hospital is identified as a historical generator of ignitable waste (D001), selenium (D010), spent nonhalogenated solvents (F003), warfarin & Salts (P001), arsenic oxide (P012), nicotine (P075), mitomycin C (U010), chlorambucil (U035), cyclophosphamide (U058), daunomycin (U059), melphalan (U150), phenol (U188), selenium sulfide (U205), streptozotocin (U206), barium (D005), chromium (D007), mercury

(D009), silver (D022), m-cresol (D024), and not defined (D000). Additionally, this facility has been identified with following violations: records/reporting, pre-transport, TSD IS-preparedness and preventions, and state statute. All cases associated with the violations have been satisfied or closed. The facility is identified on several databases discussed herein, including AST, UST, LTANKS and NY SPILLS. Based on this information there is potential for impact to the Site from this RCRA-LQG facility should a release occur, and is therefore a REC.

No RCRA-LQG facilities were identified between a ⅛-mile and ¼-mile radius of the Site. The RCRA-LQG data was last updated on September 12, 2016 (EDR Inc., 2017).

5. Resource Conservation and Recovery Act (RCRA)- Small Quantity Generator (SQG): The RCRA-SQG database is USEPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments (HWSA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. SQGs generate between 100 kilograms (kg) and 1,000 kg of hazardous waste per month. The RCRA-SQG database is administered by the EPA.

   The Site was not identified on the RCRA-SQG database.

   No RCRA-SQG facilities were identified within a ⅛-mile radius of the Site. One RCRA-SQG facility was identified between a ⅛-mile and ¼-mile radius of the Site. Winthrop University Hospital is located at 200 Old Country Road at a lower elevation relative to the Site. Winthrop University Hospital is identified as a historical generator of Mitomycin C (U010), cyclophosphamide (U058), daunomycin (U059), melphalan (U150) and streptozotocin (U206). Additionally, this facility has been identified with violations for TSD IS-Preparedness and Prevention, LDR – General, records and reporting, Generators – Manifest, Generators – General and Generators – Pre-Transport. All violations associated with this facility have been satisfied and closed. Based on this information there is limited potential for impact to the Site from this RCRA-SQG facility should a release occur. The RCRA-SQG data was last updated on September 12, 2016 (EDR Inc., 2017).

6. Resource Conservation and Recovery Act (RCRA)-Conditionally Exempt Small Quantity Generator (CESQG): The RCRA-CESQG database is USEPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments (HWSA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. CESQGs generate less than 100 kilograms (kg) of hazardous waste, or less than 1 kg of acutely hazardous waste per month. The RCRA-CESQG database is administered by the EPA.

   The Site was not identified on the RCRA-CESQG database.

   One RCRA-CESQG facility was identified within a ⅛-mile radius of the Site. Winthrop University Hospital is located at 222 Station Plaza, 0.087 miles south and at a higher elevation relative to the Site. The facility is identified as a historical generator of undefined materials (D000), ignitable waste (D001), corrosive waste (D002), and spent nonhalogenated solvents (F003). Additionally, this facility has been identified with violations for TSD IS-Preparedness and Prevention, Universal Waste – Small Quantity Handlers, state statute, LDR – General, records and reporting, Generators – General and Generators – Pre-Transport. All violations associated with this facility has been satisfied and closed. The facility is identified on several databases discussed herein, including AST, UST, and NY MANIFEST. Based on this information there is limited potential for impact to the Site from this RCRA-CESQG facility should a release occur. No RCRA-

CESQG facilities were identified between a ⅛-mile and ¼-mile radius of the Site. The RCRA-CESQG data was last updated on September 12, 2016 (EDR Inc., 2017).

7. Engineering Controls Site List (US ENG CONTROLS) Database: A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

   The Site was not identified on the US ENG CONTROLS database.

   No US ENG CONTROLS facilities were identified within a ⅛-mile radius of the Site. No US ENG CONTROLS facilities were identified between a ⅛-mile and ¼-mile radius of the Site. One US ENG CONTROLS facility was identified between a ¼-mile and ½-mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from the US ENG CONTROLS facility. The US ENG CONTROLS data was last updated on November 15, 2016 (EDR Inc, 2017).

State Records

8. Known Contaminated Sites Administered by NYDEC (NY State Hazardous Waste Site [SHWS]) Database: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These Sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites were cleanup will be paid for by potentially responsible parties. The data come from the New York State Department of Environmental Conservation's (NYSDEC) Inactive Hazardous Waste Disposal Sites list.

   The Site was not identified as a SHWS facility.

   No SHWS facilities were identified within a ¼-mile radius of the Site. One SHWs facilities were identified between a ¼-mile and ½-mile radius of the Site. Ten SHWS facilities were identified between a ½-mile and a 1-mile radius of the Site. Based on their distances to the Site, there is limited potential for impact to the Site from these SHWS facilities. The SHWS data was last updated on June 30, 2016 (EDR Inc., 2017).

9. NY Vapor Reopened: Vapor intrusion refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in the analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion. This database is maintained by NYSDEC.

   The Site was not identified as a NY Vapor Reopened facility.

   No NY Vapor Reopened facilities were identified within a ½-mile radius of the Site. One NY Vapor Reopened facilities were identified between a ½-mile and 1 mile radius of the Site. Based on the distance to the Site and the "Underway (Mitigated)" status, there is limited potential impact to the Site from these NY Vapor Reopened facilities. The NY Vapor Reopened database was last updated on June 1, 2016 (EDR Inc., 2017).

10. New York Solid Waste Facilities/Landfill Sites (NY SWF/LF): Solid Waste Facilities/Landfill Sites type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the State, these may be active or inactive facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal.

    The Site was not identified as a NY SWF/LF facility.

    No NY SWF/LF facilities were identified within a ¼-mile radius of the Site. One NY SWF/LF facilities were identified between a ¼-mile and ½-mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from these NY SWF/LF facilities. The NY SWF/LF data was last updated on January 4, 2017 (EDR Inc., 2017).

11. New York Leaking Storage Tanks Incident Reports (NY LTANKS): These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. This database is maintained by NYSDEC.

    The Site was not identified as a NY LTANKS facility.

    The following six NY LTANKS facilities were identified within a ⅛-mile radius from the Site:

    - Heritage House, at 135 3rd Avenue, 0.017 miles west (across 3rd Avenue) of the Site and at a higher elevation relative to the Site. Spill No. 9401816 was opened due to tank test failure with a release of No. 4 fuel oil on May 6, 1994. The spill case was closed on January 29, 2004. Due to the nature of the spill and closed status, this facility is considered an other finding, as defined by Matrix.
    - A facility identified as Apartments, at 225 1st Street, 0.025 miles south (across 1st Street) and at a higher elevation relative to the Site. Spill No. 9212459 was opened due to a release of approximately 3-gallons of No. 2 fuel oil from a tank overfill on February 3, 1993. Corrective action was completed and the case was closed on February 3, 1993. This site is also listed on NY SPILLS. Due to the above information and closed nature of the spill, there is limited potential for impact to the Site from this facility.
    - Winthrop University Hospital, located at 259 1st Street, 0.052 miles southwest and at higher elevation relative to the Site. The facility had a noted spill of No. 2 fuel oil due to a tank test failure on December 9, 1987. NYS DEC was notified and Spill No. 8707768 was assigned to this facility. Corrective action was taken and the case was closed on June 5, 1991. This facility is also identified on several other databases, including AST, UST, NY SPILLS, and LQG, and is considered an other finding, as defined by Matrix.
    - Boulevard Towers, located at 190 1st Street, 0.047 miles east and at a higher elevation relative to the Site. Spill No. 9400326 was opened for a release of No. 4 fuel oil on April 7, 1994 due to a tank test failure. The spill case was closed for this facility on December 19, 1997. Due to the above information and closed nature of the spill, there is limited potential for impact to the Site from this facility.
    - The US Post Office, located on North Main Street, 0.122 miles east and at higher elevation relative to the Site. Spill No. 9608773 was assigned for a release for No. 2 fuel oil October 15, 1996 due to a tank test failure. Corrective action was the spill was closed on August 6, 2002. Due to the above information and closed nature of the spill, there is limited potential for impact to the Site from this facility.
    - 516 E Adams, located at 109 – 115 North Main Street, 0.112 miles east and at a lower elevation relative to the Site. Spill No. 9304137 was assigned due to a release of approximately 20-gallons of gasoline on June 29, 1993. The spill case was closed on August 6, 1993. Due to the above

information and closed nature of the spill, there is limited potential for impact to the Site from this facility.

Eleven NY LTANKS facilities were identified between a ⅛-mile and ¼-mile radius of the Site. Twenty-nine NY LTANKS facilities were identified between a ¼-mile and ½-mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from these NY LTANKS facilities. The NY LTANKS data was last updated on February 6, 2017 (EDR Inc., 2017).

12. New York Underground Storage Tank (NY UST): The underground storage tank database contains registered USTs. USTs are regulated under Subtitle I of the RCRA. The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database.

    The Site was not identified as a NY UST facility.

    Five facilities were identified within a ⅛-mile radius of the Site.
    - 212 Realty is located at 134 Mineola Boulevard, 0.032 miles east and at a higher elevation relative to the Site. This facility had a UST removed on February 28, 1995. No other tank closure information was provided. Based on this information, there is potential for impact to the site should a release have occurred.
    - Winthrop University Hospital, located at 259 1st Street, 0.052 miles southwest and at higher elevation relative to the Site. No other information was provided for this facility. Based on this listing and its listing on other databases described in this section, this facility is considered an other finding, as defined by Matrix.
    - Boulevard Towers, located at 190 1st Street, was identified at a higher elevation relative to the Site. This facility had a UST installed in June of 1995. No other information was provided for this facility. The facility is also listed on LTANKS and based the proximity and upgradient direction from the site, there is potential for impact to the Site should a release occur.
    - Winthrop University Hospital is located at 222 Station Plaza, 0.087 miles south and at a higher elevation relative to the Site. This facility had USTs removed on July 31, 1991, August 1, 1991, and May 3, 1994. No other tank closure information was provided. This facility currently has two active USTs that were installed on December 12, 2007. This facility is also identified in RCRA-CESQG, NY AST and NY Manifest databases. Based the proximity and upgradient direction from the site, there is potential for impact to the Site should a release occur.
    - Texaco is located at 175 Mineola Boulevard, 0.090 miles north and at a higher elevation relative to the Site. This facility had two USTs removed. No other tank closure information was provided. Based on the information provided and distance to the Site, there is limited potential for impact to the Site from the listed facilities.

    Six NY UST facilities were identified between ⅛-mile to ¼-mile radius of the Site. Due to the distance of these facilities to the Site, there is no potential to impact the Site from the listed facilities.

13. New York Above Ground Storage Tanks (NY AST): The AST database contains registered ASTs. The data comes from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database.

    The Site was not identified as a NY AST facility.

    Four facilities were identified as a NY AST within ⅛-mile radius of the Site.
    - Winthrop University Hospital is located at 259 1st Street, 0.052 miles southwest and at a higher elevation relative to the Site. Ten ASTs are currently in-service at this facility: Tank 0050 is a 3,720-gallon No. 2 fuel oil AST; Tanks 0045, 0044, 0046, and 0049 are 240-gallon No. 2 fuel oil ASTs;

Tank 0048 is a 280-gallon is a No. 2 fuel oil AST; and Tanks 0018, 0030, 0040 and 0042 are 275-gallon No. 2 fuel oil ASTs. No violations were identified in relation to the ASTs. The facility is identified on several databases discussed herein, including RCRA LQG, UST, LTANKS and NY SPILLS. Based on this information there is potential for impact to the Site from this RCRA-LQG facility should a release occur, and is an other finding.

- Winthrop Institute for Care is located at 120 Mineola Boulevard, 0.057 miles southeast and at a higher elevation relative to the Site. One active AST is present at this facility. No other further information was provided. There are no spills or other listings associated with this facility. Based on this information there is limited potential for impact to the Site from this NY AST facility.
- Winthrop University SVC's Corp. located at 222 Station Plaza 0.087 miles south and at a higher elevation relative to the Site. There is one active AST located in at this facility that was January 1, 1979. No other information was provided for this AST.
- Winthrop University Hospital is located at 222 Station Plaza 0.087 miles south and at a higher elevation relative to the Site. Four ASTs are currently in-service at this facility that were installed in June 4, 1998, May 1, 2000, June 30, 2005, and November 20, 2006. No other information was provided for this facility. Based on the information provided, there is limited potential for impact to the Site from this NY AST facility if a spill were to occur.

Two NY AST facilities were identified between ⅛-mile and ¼-mile radius of the Site. Based on the distance of the facilities to the Site, there is no potential for impact to the Site from the NY AST facilities.

14. New York Tank (NY TANKS) Database: This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

    The Site is not identified as a NY TANKS facility.

    No NY TANKS facilities were identified within a ⅛-mile radius of the Site. Two NY TANKS facilities were identified between a ⅛-mile and ¼-mile radius of the Site. Based on the distance of the facilities to the Site, there is no potential for impact to the Site from the NY AST facilities.

15. New York Voluntary Cleanup Agreements (NY VCP) Database: The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

    The Site was not identified as a NY VCP facility.

    No NY VCP facilities were identified within a ⅛-mile radius of the Site. One NY VCP facilities was identified between a ⅛-mile and ¼-mile radius of the Site. No NY VCP facilities were identified between a ¼-mile and ½-mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from these NY VCP facilities. The NY VCP data was last updated on November 14, 2016 (EDR Inc., 2017).

Other Ascertainable Records

16. New York Spills (NY SPILLS): This database includes data collected on spills reported to the NYSDEC, required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs.), or 6 NYCRR Section 595.2 (from CBS regs.). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

    The Site was not identified as a NY SPILLS facility.

Twenty facilities were identified as a NY SPILLS facilities within ⅛-mile radius of the Site. Thirteen facilities were identified at a higher elevation and seven facilities were identified at a lower elevation than the Site. The following thirteen sites were topographically upgradient from the site:

- So. Side Carting is located at 21st and 3rd Streets, 0.008 miles south of the Site. Spill No. 9211900 was assigned for a spill of approximately 20-gallons of waste/used oil caused by a traffic accident on January 19, 1993. Corrective action was taken and the case was closed on March 3, 1993. Based on the information above and the closed status of the spill, this facility is not considered a REC.
- Town House Apts/Raddock, located at 225 1st Street, 0.025 miles south of the Site. a Spill No. 9105852 was assigned for a release from No. 4 fuel oil tank that occurred on August 29, 1994. Corrective action was taken and the case was closed on May 6, 1994. Based on the information above and the closed status of the spill, this facility is not considered a REC.
- Towne House Apt. also located at 225 1st Street, 0.025 miles south of the Site. Spill No. 8910360 was assigned for a 10-20-gallon release of No. 2 fuel oil, due to a tank overfill on January 20, 1990. Corrective action was taken and the case was closed on January 31, 1990. Based on the information above and the closed status of the spill, this facility is not considered a REC.
- Triangle Petroleum, located between Mineola Boulevard and 1st Street, 0.035 miles southeast of the Site. Spill No. 8808423 was assigned for a No. 2 fuel oil release from a tanker truck during transportation on January 23, 1990. Corrective action was taken and the case was closed on February 13, 1989. Based on the information above and the closed status of the spill, this facility is not considered a REC.
- Winthrop University Hospital, located at 1st Street, 0.052 miles southwest of the Site, was identified in the database as having two spills.
    - Spill No. 9704765 was assigned for a release of 20-gallons of petroleum occurred due to equipment failure on July 21, 1997. Corrective action was taken and the spill was closed September 11, 1997.
    - Spill No. 8807720 was assigned for a release of approximately 1-gallon of non-PCB oil due to equipment failure on December 20, 1998. Corrective action was taken and the spill was closed on December 22, 1998.

  This Winthrop University Hospital Location is mapped at the same location at the 259 1st Street Location, which is on several databases described in this section and is considered an other finding.

- A commercial/industrial facility located at 200 2nd Street, 0.065 miles southeast of the Site. Spill No. 0009663 was assigned for a November 24, 2000 release of approximately 1-gallon No. 2 fuel oil due to an overfilled tank. Corrective action was taken and the case was closed on November 24, 2000. Based on the information above and the closed status of the spill, this facility is not considered a REC.
- The roadway located near 190 1st Street and Main Street, 0.067 miles east of the Site, is listed twice in the database for the same spill, as noted in the database for Spill Nos. 9315517 and 9315486. Approximately 40 to 50 gallons of No. 4 fuel oil was released due to an overfilled tank on March 31, 1994. Corrective action was taken and the case was closed on November 1, 1994. Spill No. 9315486 notes was case was closed on June 2, 2004, and notes the database problem was due to a translation discrepancy. Based on the information above and the closed status of the spill, this facility is not considered a REC.
- An apartment complex located at 190 1st Street, 0.067 miles east of the Site. Spill No. 0905047 was assigned for petroleum-impacted soils identified during the removal of a No. 2 fuel oil UST. Corrective action was taken by removing 4 cubic yards of contaminated soils and the case was closed on September 8, 2009. Based on the information above and the closed status of the spill, this facility is not considered a REC.

- Winthrop University Hospital, located at 231 2nd Street, 0.072 miles southeast of the site. Spill No. 9306649 was assigned for the release of approximately 3-gallons of No. 2 fuel oil due equipment failure on August 31, 1993. The spill case for this facility was closed on December 31, 1933. Based on the information above and the closed status of the spill, this facility is not considered a REC.
- A commercial/industrial facility located at 141 Horton Highway, 0.083 miles northwest of the Site. Spill No. 1208061 was assigned for the release of 30-gallons of dielectric fluid discharged during a severe storm on October 30, 2012. Corrective action was taken and the case for this facility was closed on May 9, 2013. Based on the information above and the closed status of the spill, this facility is not considered a REC.
- Mineola Realty located at 183 Mineola Boulevard, 0.109 miles north of the Site. Spill No. 0025460 was assigned for the release of approximately 100-Gallons of No. 2 fuel oil to a parking lot due to a broken fill pipe on March 30, 2001. Corrective action was taken and the case was closed on July 18, 2003. Based on the information above and the closed status of the spill, this facility is not considered a REC.
- The Caracciollo Residence located at 183 Garfield Avenue, 0.123 miles northeast of the Site. Spill No. 0811091 was assigned for petroleum-impacted soils identified after water entered an abandoned 1,000-gallon No. 2 fuel oil UST on July 6, 2009. Corrective action to remove the UST and approximately 15 tons of contaminated soils was completed and the case was closed on April 23, 2009. Based on the distance to the Site and the closed status of the spill case, this facility is not considered a REC.

Seven NY SPILLS sites were topographically downgradient from the Site and all at least 0.065 miles from the Site. Each spill case in association with these sites is closed. Based on the distance and the elevation from the Site and the closed spill status for each case, there is limited potential for impact to the Site from these downgradient NY SPILLS facilities. The NY SPILLS data was last updated on February 6, 2017 (EDR Inc., 2017).

17. Resource Conservation and Recovery Act Non-Generator (RCRA NON-GEN/NLR): EPAs comprehensive information system, providing access to data supporting the RCRA of 1976 and the HSWA of 1984. The database includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by the RCRA. Non-Generators do not presently generate hazardous waste.

    The Site was not identified as a RCRA NON-GEN/NLR facility.

    Five facilities were identified within ⅛-mile radius of the Site. Two facilities were identified at a higher elevation and three facilities were identified at a lower elevation than the Site. The following two sites were topographically upgradient from the site:

    - ADT Securities is located at 155 Mineola Boulevard, 0.021 miles northeast of the Site and was identified as a large quantity generator handler of corrosive waste (D002) with no violations.
    - Oncogene Science Inc., located at 222 Station Plaza North, 0.087 miles south of the Site, was identified as a small quantity generator handler of a undefined substance (D000), ignitable waste (D001), spent nonhalogenated solvents (F002, F003, and F005), benzenethiol or thiophenol (P014), 2,4-dinitrophenol (P048), acetic acid (P058), phenythiourea (P093), sodium azide (P105), ethanol (U001), acetonitrile (U003) 2-propenamide (U007), chloroform (U044), methyl chloride (U045), methylene chloride (U080), ethyl acetate (U112), ethyl ether (U117), isobutyl alcohol (U140), methyl alcohol (U154), phenol (U188), pyridine (U196), tetrahydrofuran (U213), and thiourea (U219). This facility has received no violations.

    Based on the distance from the Site and no violations, there is limited potential for impact to the Site from these RCRA NON-GEN/NLR facilities.

Twelve facilities were identified within ⅛-mile and ¼-mile of the Site as a RCRA NON-GEN /NLR facility. Based on the distance from Site, there is limited potential for impact from these RCRA NON-GEN/NLR facilities to the Site. This RCRA NON-GEN/NLR database was last updated on December 12, 2016 (EDR Inc., 2017).

18. Record of Decision (ROD): ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

    The Site is not identified as a ROD facility.

    No ROD facilities were identified within ¼-mile radius of the Site. One ROD facility was identified between ¼-mile and ½-mile radius of the Site. One ROD facility was identified between ½-mile and 1-mile radius of the Site. Based on the information provided and the distance of the facility to the Site, there is limited potential for impact from this ROD facility to the Site. This ROD database was last updated on November 25, 2013 (EDR Inc., 2017).

19. New York Drycleaners (NY DRYCLEANERS): A listing of all registered dry cleaning facilities.

    The Site was not identified as a NY DRYCLEANERS facility.

    Two NY DRYCLEANERS facilities were identified within a ⅛-mile radius of the Site.
    - Sumner's Cleaner (Facility ID 1-2822-01077), located at 100 Mineola Boulevard, 0.072 miles southeast of the site and identified at a lower elevation relative to the Site. This facility has an inspection date of October 25, 2004.
    - Adelphi II French Dry Cleaners (Facility ID 1-2822-01364) is located at 208 Station Plaza North, 0.113 miles south and at a lower elevation relative to the Site. This facility was last inspected on October 25, 2004. No further information was provided regarding both facilities.

    Based on the distance and lower elevation relative to the Site, there is limited potential for impact to the Site from these NY DRYCLEANERS facilities. No NY DRYCLEANERS facilities were identified between a ⅛-mile and ¼-mile radius of the Site. The NY DRYCLEANERS data was last updated on October 27, 2016 (EDR Inc., 2017).

20. New York Manifest (NY MANIFEST): Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

    The Site is not identified as a NY MANIFEST facility.

    Five NY MANFIEST facility was identified within ⅛-mile radius of the Site. Three NY MANIFEST facilities are located at a higher elevation and two NY MANIFEST facilities are located at a lower elevation than the Site. The following three facilities are topographically upgradient of the facility. ADT Securities, located at 155 Mineola Boulevard, was identified for non-listed corrosive wastes (D002) in 1992. Winthrop University Hospital located at 259 1st Street was identified as shipping manifested waste for waste codes U206 for 1997 and 2000. Due to its listing on other databases, this facility is considered an other finding. Winthrop University Hospital, located at 222 Station Plaza, was identified as shipping manifested waste for waste codes D001 and F003 for 2013. Based on the elevation relative to the Site, there is potential for impact to the target property from this NY MANIFEST facility.

    The following two facilities are topographically downgradient of the facility. Sumner's Cleaners, located at 100 Mineola Boulevard, was identified as shipping manifested waste for waste code F002 for 1988 to 1989,

1990, 1992, and 1995. RSDL Corp., located at 213 Station Plaza, was identified as shipping manifested waste for waste code D001 for 1991. Based on the elevation relative to the Site, there is potential for impact to the target property from the NY MANIFEST facility. Seven NY MANIFEST facilities were identified between a 1/8-mile and ¼-mile radius of the Site. Based on the distance from the facilities to the Site, there is no potential for impact from the NY MANIFEST facilities to the Site. This NY MANIFEST database was last updated on January 30, 2017 (EDR Inc., 2017).

21. New Jersey Manifest (NJ MANIFEST): Hazardous waste manifest information.

    The Site is not identified as a NJ MANIFEST facility.

    One NJ MANIFEST facility was identified within ⅛-mile radius of the Site. Winthrop University Hospital, located at 259 1st Street, was identified as a NJ MANIFEST facility for shipping ignitable waste (D001), acute wastes (P001 and P075), and non-acute wastes (U188 and U205) in 2012 and 2013 and in 2011 for non-acute wastes (U035 and U058). Based on the elevation relative to the Site, there is little potential for impact to the target property from the NJ MANIFEST facility should a release occur and this facility is listed as an other finding, as defined by Matrix. One NJ MANIFEST facility was identified between a ⅛-mile and ¼-mile radius of the Site. Based on the elevation of the facility and the distance from the Site, there is no potential for impact to the Site from the NJ MANIFEST facility. This NJ MANIFEST database was last updated on December 31, 2015 (EDR Inc., 2017).

22. Pennsylvania Manifest (PA MANIFEST): Hazardous waste manifest information.

    The Site is not identified as a PA MANIFEST facility. One PA MANIFEST facility was identified within ⅛-mile radius of the Site. Winthrop University Hospital is located at 259 1st Street at a higher elevation relative to the Site. This facility was identified as a PA MANIFEST in 2013 for Tanks 0018, 0030, 0040, 0042, 0044, 0045, 0046, 0048, 0049, and 0050 of No. 2 fuel oil stored in metal drums, barrels, and kegs. No other information was provided for this facility. Based on the elevation of the facility and the distance from the Site, there is limited potential for impact to the Site from this PA MANIFEST facility. No PA MANIFEST facilities were identified between a ⅛-mile and ¼-mile radius of the Site. This PA MANIFEST database was last updated on December 31, 2015 (EDR Inc., 2017).

EDR Recovered Government Archives

23. EDR Manufactured Gas Plant (EDR MGP) Database: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

    The Site is not identified as EDR MGP facility.

    No EDR MGP facilities were identified within ½-mile radius of the Site. One EDR MGP facility was identified between ½ -mile and 1-mile radius of the Site at a lower elevation. Based on the elevation of the facility and the distance from the Site, there is no potential for impact to the Site from this EDR MGP facility. (EDR Inc., 2017).

24. EDR Hist. Cleaner Database: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

    The Site is not identified as EDR Hist. Cleaner facility.

    Four EDR Hist. Cleaner facilities were identified within ⅛-mile radius of the Site. One EDR Hist. Cleaner facility is located at a higher elevation and three EDR Hist. Cleaner facilities are located at lower elevations relative to the Site. A facility located at 246 Cleveland Ave, at higher elevation, was identified as J&A Cleaning Inc. in 2007, 2008 and 2012. Based on the distance from the Site, there is potential for impact to the Site from the EDR Hist. Cleaner facility.

4.2 Additional Environmental Record Sources

Matrix contacted the USEPA, NYS DEC, Nassau County Clerk and fire department, and Municipal Clerk regarding environmental files for the Site. On March 8, 2017, Matrix received a response from the Village of Mineola. The Municipal Clerk was unable to complete this request with an unknown mailing address. Nassau County Clerk's Office did not provide any documents. Outstanding requests remain for USEPA, NYSDEC and Nassau County Fire Department.

Copies of FOIL requests and responses are provided in Appendix C.

4.3 Historical Use Information on the Property and Surrounding Properties

4.3.1 Sanborn Maps

A search was made through EDR for historical Sanborn Fire Insurance (Sanborn) maps for the Site and surrounding properties. Fire insurance maps were initially produced by private companies for the insurance industry to provide information on fire risks to buildings and other structures. Fire insurance maps serve as an historical resource for evaluating the potential for site contamination based on history of past use. As a result of the search, Sanborn maps for the years 1908, 1917, 1925, 1937, 1950, 1961, 1963, and 1970 were available for the Site and surrounding area. Significant features of the Site and surrounding area for each map are described below. A copy of the Sanborn Map Report is included in Appendix D.

1908 Sanborn Map

The 1908 Sanborn map indicates that the Site is mainly unimproved and undeveloped bordered by Harrison Ave to the north and 1st Street to the south. The surrounding area consists of undeveloped/vacant land to the

immediate north, west and south, one-story and two-story residential dwellings with sheds, coops, a wagon shed, ice cream making facility and a building labeled as an auto house/garage farther east across Mineola Ave. Wind mills are shown north and south of the Site. Adjacent to the wind mill north of the Site is another building labeled as an auto house/garage. Commercial properties such as Smith's Mineola Laundry are located at the corner of Cleveland and Mineola Ave, just north of the Site.

1917 Sanborn Map

The 1917 Sanborn Map indicates that the Site is improved with a two-story residential dwelling in the northeast corner. The surrounding area consists of undeveloped/vacant land to the immediate east, west and south, with an unlabeled building to the northeast. A dry goods building, meat facility, grocery store and a tailor shop are to the east across Mineola Boulevard. The surrounding area to the southwest partially illustrates an auto-designated building, laundry, dining room and employee quarters. A building to the southwest, part of the current-day Winthrop Hospital, is labeled as Service Building. Also to the southwest is an auto-related building. The area to the north has been further developed with residential homes and garages. No other significant changes have occurred to the surrounding area since the 1908 Sanborn Map.

1925 Sanborn Map

The 1925 Sanborn Map indicates that the Site divided into eight parcels. Five of the eight parcels, making up the northern portion of the site, are improved with two-story residential dwellings, and two of those appear to have garages in the rear of the parcels. The site is bordered by Harrison Avenue, 3rd Avenue, and 1st Street to the north, west and south respectively. Mineola Avenue is to the east of the Site with a post office building, two-story shops, and a two-story shop with an area illustrated as an oven. The aforementioned auto house/garage and ice cream maker facility to the east of the Site have been replaced by a dwelling and a shed, respectively. The surrounding area consists of additional one-story and two-story residential dwellings to the north, east, south, and west of the Site and Nassau County Trust Company to the south on the corner of 2nd Street and Mineola Boulevard. Nassau Hospital is shown farther southwest of the Site. No other significant changes have occurred to the surrounding area since the 1917 Sanborn Map.

1937 Sanborn Map

The 1937 Sanborn Map indicates two additional garages are visible at the residential parcels on-Site. No other significant changes have occurred to the Site since the 1925 Sanborn Map. The surrounding area consists of Nurses Home to the southwest of the Site along 1st Street, Mineola Theater to the southeast of the Site on the corner of 1st Street and Mineola Boulevard and a two-story brick-faced cinder-block commercial building

described with the terms “paints”, immediately to the east of the Site. The aforementioned post office building is now labeled as a store, and there are now photo and printing facilities to the northeast of the Site. No other significant changes have occurred to the surrounding area since the 1925 Sanborn Map.

1950 Sanborn Map

The 1950 Sanborn Map indicates that all five residential parcels appear to have garage structures at the rear of the properties. No other significant changes have occurred to the Site. The property immediately to the east of the Site designated as paints appears to have extended eastward, with potentially unassociated structures including a building designated, “3 cars.” A filling station, doctor’s office, and undertaker are now shown across Mineola Avenue. Furthermore, there is a greenhouse located beyond Second Street, to the south of the Site. No other significant changes have occurred to the surrounding areas since the 1937 Sanborn Map.

1961 Sanborn Map

The 1961 Sanborn Map indicates no significant changes had occurred to the Site. The property immediately to the south of the Site that were once residential dwellings has been developed into The Town House Apartments with a parking lot. The surrounding area consists of The Horton House Apartments and Nassau Towers Apartments to the west, dry cleaners to the south along 2nd Street between Mineola Avenue and 3rd Avenue, electronic equipment manufacturing building and undertaker to the east across Mineola Avenue and a photo shop to the northeast of the Site. There are also multiple office buildings and a parking lot to the north/northwest of the Site. No other significant changes have occurred to the surrounding area since the 1950 Sanborn Map

1963 Sanborn Map

The 1963 Sanborn Map indicates no significant changes had occurred to the Site. The surrounding area illustrates dry cleaners at the southwestern corner of 1st Street and Mineola Boulevard just southeast from the Site. An upholstery store and restaurant now occupy two of the storefronts east of the Site. The filling station is still shown but no tanks are depicted. No other significant changes have occurred to the surrounding area since the 1961 Sanborn Map.

1970 Sanborn Map

The 1970 Sanborn Map indicates the residential dwellings that were illustrated on the 1963 Sanborn Map are no longer present and the Site is completely undeveloped. The most southwesterly portion of the Site is labeled as a parking area. The shops that were located south of the dry cleaners at the corner of 1st Street and Mineola Boulevard, just southeast of the Site are illustrated as fire damaged. The residences immediately west of the Site across 3rd Avenue appear to have been redeveloped into a larger structure, possibly an apartment building. The

aforementioned electronics equipment manufacturer facility is now identified as a store. No other significant changes have occurred to the surrounding areas since the 1963 Sanborn Map.

4.3.2 Aerial Photographs

An inquiry was made with EDR to obtain historical aerial photographs for the Site. Aerial photographs were reviewed for the years 1938, 1943, 1947, 1951, 1953, 1962, 1966, 1976, 1980, 1984, 1994, 2006, 2009, and 2011. These photographs were used to determine past land usage and major improvement to the Site and surrounding area. Copies of EDR aerial photographs are included in Appendix E.

1938 Aerial Photograph (1" = 500')

The 1931 aerial photograph indicates that the Site is improved and developed on the northern side of the Site with small residential dwellings. The southern portion of the Site is a vacant lot. The surrounding area indicates a mixture of commercial and residential dwellings, landscaped area, and the railroad to the south. The Nassau Hospital campus is visible well to the southwest.

1943 Aerial Photograph (1" = 500')

The 1940 aerial photograph is of poor resolution and indicates no significant changes are visible to the Site or the surrounding area since the 1938 aerial photograph.

1947 Aerial Photograph (1" = 500')

The 1947 aerial photograph indicates no significant changes have occurred to the Site or the surrounding area since the 1933 aerial photograph.

1951 Aerial Photograph (1" = 500')

The 1951 aerial photograph indicates no significant changes have occurred to the Site or the surrounding area since the 1947 aerial photograph.

1953 Aerial Photograph (1" = 500')

The 1953 aerial photograph indicates no significant changes have occurred to the Site or the surrounding area since the 1951 aerial photograph.

1962 Aerial Photograph (1" = 500')

The 1962 aerial photograph indicates the southern portion of the Site is now developed as a parking area. The site immediately south of the site, across 1st Street has been redeveloped as a large building. No other significant changes have occurred to the Site or the surrounding area since the 1953 aerial photograph.

1966 Aerial Photograph (1" = 500')

The 1966 aerial photograph indicates no significant changes have occurred to the Site or the surrounding area since the 1962 aerial photograph.

1976 Aerial Photograph (1" = 500')

The 1976 aerial photograph indicates all but the northeast portion of the Site is developed as a parking garage. The property immediately west of the site, across 3rd Avenue has been redeveloped into a large building. No other significant changes have occurred to the Site or the surrounding area since the 1966 aerial photograph.

1980 Aerial Photograph (1" = 500')

The 1980 aerial photograph indicates no significant changes have occurred to the Site or the surrounding area since the 1976 aerial photograph.

1984 Aerial Photograph (1" = 500')

The 1984 aerial photograph indicates no significant changes have occurred to the Site or the surrounding area since the 1980 aerial photograph.

1994 Aerial Photograph (1" = 500')

The 1994 aerial photograph indicates no significant changes have occurred to the Site or the surrounding area since the 1984 aerial photograph.

2006 Aerial Photograph (1" = 500')

The 2006 aerial photograph indicates no significant changes have occurred to the Site or the surrounding area since the 1994 aerial photograph.

2009 Aerial Photograph (1" = 500')

The 2009 aerial photograph indicates the parking garage that was visible in the 2006 aerial is now a grade level parking lot. No other significant changes have occurred to the Site or the surrounding area since the 2006 aerial photograph.

2011 Aerial Photograph (1" = 500')

The 2011 aerial photograph indicates no significant changes have occurred to the Site or the surrounding area since the 2006 aerial photograph.

4.3.3 Historical Topographic Maps

An inquiry was made with EDR to obtain historical USGS topographic maps for the Site. Historical topographic maps were reviewed for the following quadrants and years: Hempstead and Oyster Bay, New York 1897, 1898, 1899, and 1900; Hempstead, New York 1903; and Lynbrook, New York, Hicksville, New York, Freeport, New York, and Sea Cliff, New York 1947, 1954, 1955, 1967, 1968, 1969 and 2013. No significant changes in elevation were noted. Copies of the historical topographic maps can be found in Appendix F.

1897 Hempstead and Oyster Bay Quadrant Topographic Map

The 1897 Hempstead and Oyster Bay Quadrant Topographic Map indicates that the Site is undeveloped in the Village Mineola. The land to the immediate north and west are undeveloped. To the south and east of the Site are small buildings and to the south and east is LIRR.

1898 Hempstead and Oyster Bay Quadrant Topographic Map

The 1898 Hempstead and Oyster Bay Quadrant Topographic Map indicates that no significant changes have occurred to the Site or surrounding area since the 1897 Hempstead and Oyster Bay Quadrant Topographic Map.

1899 and 1900 Hempstead and Oyster Bay Quadrant Topographic Map

The 1899 and 1900 Hempstead and Oyster Bay Quadrant Topographic Map indicates that no significant changes have occurred to the Site or surrounding area since the 1898 Hempstead and Oyster Bay Quadrant Topographic Map.

1903 Hempstead Quadrant Topographic Map (1:62,500)

The 1903 Hempstead Quadrant Topographic Map is unmapped within the area of the Site and its surrounding properties.

1947 Hicksville, Lynbrook, Freeport, and Sea Cliff Quadrant Topographic Maps

The 1947 Hicksville, Lynbrook, Freeport, and Sea Cliff Quadrant Topographic Maps indicate that the Site is developed and improved with structures. The land to the north, east, south and west has become more developed with buildings. Mineola Grade School, Jericho Turnpike and a Pumping Station are shown well north of the Site; Nassau Hospital to the southwest of the Site; LIRR, Nassau County Court House and Garden City are shown well

south of the Site; Mineola High School, Chaminade High School and Old Court House Road are shown well west of the Site; and LI Oyster Bay Railroad and a leaching cesspool well east of the Site. No other significant changes have occurred to the surrounding area since the 1897 Hempstead and Oyster Bay Quadrant Topographic Map.

1954 and 1955 Hicksville, Lynbrook, Freeport, and Sea Cliff Quadrant Topographic Maps

The 1954 and 1955 Hicksville, Lynbrook, Freeport, and Sea Cliff Quadrant Topographic Maps do not show any structures on-Site and illustrates very few structures at the Site and the surrounding areas. The pumping station that was once located well north of the Site is no longer illustrated. Sewage disposal facilities are shown well east and west of the Site.

1967, 1968 and 1969 Hicksville, Lynbrook, Freeport, and Sea Cliff Quadrant Topographic Maps

The 1967 and 1969 Hicksville, Lynbrook, Freeport, and Sea Cliff Quadrant Topographic Map indicate that no changes have occurred to the Site since the 1954 and 1955 Hicksville, Lynbrook, Freeport, and Sea Cliff Quadrant Topographic Map.

2013 Hicksville, Lynbrook, Freeport, and Sea Cliff Quadrant Topographic Maps

The 2013 Hicksville, Lynbrook, Freeport, and Sea Cliff Quadrant Topographic Maps illustrate no structures or significant changes to the Site. No other significant changes are depicted for the Site or surrounding area since the 1967 and 1969 Hicksville, Lynbrook, Freeport, and Sea Cliff Quadrant Topographic Map.

4.3.4 City Directory

City directories serve as a historical resource by listing the name of a resident or the name and type of a business at a particular address. A search was made by EDR for historical city directories of the Site and immediately adjacent properties. As a result of the search, the city directories were reviewed for the years 1973, 1974, 1978, 1979, 1983, 1984, 1988, 1989, 1992, 1995, 1999, 2003, 2008, and 2013. Sources of the reviewed city directories include Cole Information Services. A copy of the City Directory Abstract Report is included in Appendix G.

Based on a review of the City Directory Abstract, the Site, located at 3rd Avenue (Block 414, Lots 18, 318, 319, and 320) in the Village of Mineola, Nassau County, New York, was identified in the EDR City Directory Abstract as further described below along with neighboring properties:

Address	Use	Year(s)

Neighboring properties across the street from the Site all have current and historical residential site use and are not listed.

4.4 Tier 1 Vapor Encroachment Screening

Matrix conducted a VES in general accordance with the ASTM Designation E2600-15 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*.

The objective of the VES is to conduct an initial screening to determine whether current or historical practices associated with the Site or nearby properties have the potential to have created a Vapor Encroachment Condition (VEC). The term VEC is defined by ASTM Standard 2600-15 "as the presence or likely presence of chemicals of concern (COC) vapors in the subsurface of the Site caused by the release of vapors from contaminated soil and/or groundwater on or near the Site as identified by Tier 1 or Tier 2 procedures."

The Tier 1 screening process includes the following: (1) a search distance test to determine if there are known or suspect contaminated properties within a designated radius of the Site; and (2) a COC test to determine for those known or suspect contaminated properties within the area whether or not a COC is likely to be present.

Matrix reviewed standard environmental record sources typically collected as part of the ASTM E1527-13 Phase I to determine if there are known or suspected sources of contamination within the AOC. The AOC is determined utilizing the approximate minimum search distances as defined by ASTM E2600-15. The approximate minimum search distance is based upon the type of COC; petroleum hydrocarbons or non-petroleum hydrocarbons. Generally, the approximate minimum search distance with regards to the AOC is one-third mile for non-petroleum hydrocarbons and one-tenth mile for petroleum hydrocarbons.

There are four possible conclusions of the Tier 1 screening process which include: (1) a VEC exists; (2) a VEC likely exists; (3) a VEC cannot be ruled out; or (4) a VEC can be ruled out because a VEC does not or is not likely to exist. If a VEC does not exist or is unlikely to exist, then the VES process is considered complete in general accordance with ASTM E2600-15. If a VEC cannot be ruled out in the Tier 1 screen, then further action may be recommended (i.e., Tier 2). A Tier 2 screening is excluded from the scope of the Tier 1 process.

4.4.1 Standard Environmental Record Sources

A VES was completed for the Site and surrounding area through a search by EDR dated March 22, 2017. The VES utilizes standard environmental record sources to determine if there are known or suspected sources of contamination within the AOC. The search was conducted in general accordance with ASTM E 2600-15 standards.

Based on the findings of the VES Worksheet, a VEC cannot be ruled out for the following facilities:

- Heritage House, located at 135 3rd Avenue is approximately 0.017 miles west/southwest of the Site and equal elevation relative to the Site.
- Apartments, located at 225 1st street is approximately 0.025 miles south/southeast of the Site and equal elevation relative to the Site.

- Winthrop University Hospital, located at 259 1st Street is approximately 0.052 miles southwest of the Site and at equal elevation relative to the Site.
- Boulevard Towers, located at 190 1st Street is approximately 0.067 miles east/northeast of the Site and at equal elevation relative to the Site.
- 516 E Adams, located at 109 – 115 N Main Street is approximately 0.112 miles east of the Site and at one foot lower elevation relative to the Site.
- Post Office, located at North Main Street is approximately 0.122 miles east/northeast of the Site and at equal elevation relative to the Site.

A copy of the Vapor Encroachment Screen is included in Appendix H.

4.5 USER PROVIDED INFORMATION

4.5.1 Title Records

Chain-of-Title records were not provided for review by Matrix. Based on information obtained from Nassau County's *Land Records Viewer*, 3rd Avenue (Block 414, Lots 18, 318, 319 and 320) in the Village of Mineola, Nassau County, New York is owned by the Village of Mineola. No other chain-of-title records were made available by the User.

4.5.2 Environmental Liens or Activity and Use Limitations

No records regarding environmental liens or activity and use limitations were provided by the User for Matrix to review.

4.5.3 Specialized Knowledge

Specialized knowledge of RECs or potential RECs in connection with the Site has been included in Section 5.

4.5.4 Commonly Known or Reasonably Ascertainable Information

Commonly known or reasonably ascertainable information has been provided in the reference Section (10.0).

4.5.5 Valuation Reduction for Environmental Issues

No information regarding the valuation reduction for environmental issues was provided by the owner.

4.5.6 Owner, Property Manager, and Occupant Information

The Site is currently owned and operated by the Village of Mineola and has no residing occupants.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

A reconnaissance of the Site and surrounding area was performed on March 13, 2017 by Christiana Seiffer of Matrix. No Site personnel were present during the site reconnaissance. All exterior areas of the property were inspected during the Site reconnaissance. There are no interior structures on-Site. During the site reconnaissance, cars were parked in most of the parking spaces within the Site and is noted as a limitation. Photographs of significant features identified during the Site reconnaissance are included in Appendix B.

5.2 General Site Setting

The Site is located between 3rd Avenue and Mineola Boulevard and occupies Section 9, Block 414, Lots 18, 318, 319, and 320 in The Village of Mineola, Nassau County, New York. The Site consists of four parcels forming one large asphalt-paved parking lot.

5.3 Exterior Observations

5.3.1 Hazardous Substances/Wastes

No evidence of hazardous substances or wastes was observed on exterior portions of the Site during the Site reconnaissance.

5.3.2 Bulk Storage Tanks and Appurtenances

Aboveground Tanks and Associated Piping

No evidence of ASTs and associated piping was observed on exterior portions of the Site during the Site reconnaissance.

Underground Tanks and Associated Piping

No evidence of USTs and associated piping was observed on exterior portions of the Site during the Site reconnaissance.

Storage Pads and Areas Including Drum/Waste Storage

No evidence of storage pads and areas including drum/waste storage was observed on exterior portions of the Site during the Site reconnaissance.

Rail, Truck, or Other Loading and Unloading Areas

No evidence of rail, truck, or other loading and unloading areas was observed on exterior portions of the Site during the Site reconnaissance.

Pump Stations, Sumps, and Pits

No pump stations, sumps, or pits were observed on exterior portions of the Site during the Site reconnaissance.

Surface Lagoons and Impoundments

No surface lagoons or impoundments were observed on exterior portions of the Site during the Site reconnaissance.

5.3.3 Drainage Systems and Areas

Surface Water Bodies

No surface water bodies were observed on exterior portions of the Site during the Site reconnaissance.

Sanitary Sewer Collection Systems

No sanitary sewer collection systems were observed on exterior portions of the Site during the Site reconnaissance.

Storm Water Collection Systems

Storm water catch basins were observed in the southwest and northeast portions of the Site.

Septic Systems and Leach Fields

No septic systems or leach fields were observed on exterior portions of the Site during the Site reconnaissance.

Seepage Pits and Dry Wells

No seepage pits or dry wells were observed on exterior portions of the Site during the Site reconnaissance.

Storm Water Detention Ponds and Fire Water Ponds

No storm water detention ponds or fire water ponds were observed on exterior portions of the Site during the Site reconnaissance.

Drainage Swales and Culverts

No drainage swales or culverts were observed on exterior portions of the Site during the Site reconnaissance.

5.3.4 Discharge and Disposal Areas

Solid Waste Generation/Disposal and Dumpsters

No dumpsters were observed on exterior portions of the Site during the Site reconnaissance.

Sanitary/Process Waste Generation/Discharge Points

No evidence of sanitary/process waste generation or discharge points was observed on exterior portions of the Site during the Site reconnaissance.

Underground Piping, Including Industrial Process Sewers

No evidence of underground piping, including industrial process sewers was observed on exterior portions of the Site during the Site reconnaissance.

Waste Piles

No evidence of waste piles was observed on exterior portions of the Site during the Site reconnaissance.

Landfills or Landfarms

Based on a review of the State's Solid Waste Facility Directory and the Site reconnaissance, no landfills or landfarms are located in close proximity to the Site.

Open Pipe Discharges

No open pipe discharges were observed on exterior portions of the Site during the Site reconnaissance.

5.3.5 Transformers

Based on the Site reconnaissance, there were three pole mounted transformers on or adjacent to the Site. One pole-mounted transformer was observed on the sidewalk at the northeast corner of the Site. An additional set of two pole-mounted transformers was observed on the sidewalk, just east of the southeast corner of the site. There was no information regarding the PCB content indicated in the vicinity of or on the transformers. There is no evidence or record of discharges from the transformers.

Matrix contacted LIPA, the owner of the transformers, regarding the contents of the transformers and received the following response:

"No analytical data is available for these transformers. However, all distribution transformers owned by LIPA were specified at the time of purchase from the manufacturer to contain a dielectric fluid consisting of mineral oil,

not PCBs. As a result, LIPA's in-service transformers typically are expected to either contain no detectable PCBs or low levels of PCBs (typically <0.01%). Even though mineral oil was specified, low levels of PCBs could nonetheless be present because manufacturers sometimes manufactured mineral oil transformers in close proximity to transformers manufactured to specifically contain PCBs. LIPA does not routinely conduct sampling and analysis of transformers for PCBs as that would require the incurrence of an outage and costs that would have to be passed on to the customer. Instead, units are tested when they retired from active service."

5.4 Interior Observations

There are no interior areas present on-Site.

6.0 INTERVIEWS

6.1 Interview with Owner

No additional personnel were present on the Site during the Site reconnaissance. A User Questionnaire was provided to LIRR for completion. A copy of the Prospective Landowner and/or User Questionnaire will be provided in Appendix I, once received.

6.2 Interview with Site Manager

As indicated above, no additional personnel were present on the Site during the Site reconnaissance; therefore, no interview was conducted with the Site Manager.

6.3 Interview with Occupants

The Site does not have any occupants.

6.4 Interview with Local Government Officials

As indicated above (Section 5.2), Matrix contacted the USEPA, NYSDEC, Nassau County Clerk, County Fire Department and the Village of Mineola Municipal Clerk regarding environmental files for the Site. Information request letters and responses from with these agencies are included in Appendix C.

6.5 Interview with Others

A User Questionnaire was provided to the LIRR for completion; Matrix received the completed questionnaire on Tuesday, March 28, 2017. A copy of the Prospective Landowner and/or User Questionnaire will be provided in Appendix I, once received.

7.0 FINDINGS & OPINIONS

Based on the site reconnaissance, database review, historical review, review of available records, and interviews with persons familiar with the Site and surrounding area, Matrix is providing findings and opinions including RECs, historical recognized environmental conditions (HRECs), *de minimis* conditions, and data gaps.

Recognized Environmental Conditions

This assessment has revealed one REC in connection with the site:

- Vapor Encroachment Condition (VEC): A Tier 1 Vapor Encroachment Screen (VES) was completed by Matrix using EDR's Vapor Encroachment Screen Worksheet. Based on available information, a potential VEC was identified at the Site. Please see Section 4.5 above for further discussion on the Tier 1 VES.

Controlled RECs

No CRECs have been identified for the Site.

Historical RECs

No HRECs were identified for the Site.

De Minimis Conditions

No *de minimis* conditions were observed or identified through interviews or records review of current or historical uses of the Site and adjoining properties.

Other Findings

The term "other finding" is not defined by ASTM; rather, Matrix uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard. Although not a considered REC based on currently available information, Matrix identified the following other findings based on review of the regulatory databases and the Site reconnaissance. Sites within 0.1 miles of the Site and at a higher elevation were determined to have the potential to impact the Site should a spill have occurred. These facilities were not identified on any other databases and there are no records of spills or other known sources of contamination from these facilities.

- 212 Realty is located at 134 Mineola Boulevard, 0.032 miles east and at a higher elevation relative to the Site. This facility had a UST removed on February 28, 1995. No other tank closure information was

provided. Based on this information, there is potential for impact to the site should a release have occurred.

- Boulevard Towers, located at 190 1st Street, was identified at a higher elevation relative to the Site. This facility had a UST installed in June of 1995. No other information was provided for this facility. The facility is also listed on LTANKS and based the proximity and upgradient direction from the site, there is potential for impact to the Site should a release have occurred.

- Winthrop University Hospital is located at 222 Station Plaza, 0.087 miles south and at a higher elevation relative to the Site. This facility had USTs removed on July 31, 1991, August 1, 1991, and May 3, 1994. No other tank closure information was provided. This facility currently has two active USTs that were installed on December 12, 2007. This facility is also identified in RCRA-CESQG, NY AST and NY Manifest databases. Based on the proximity and upgradient direction from the site, there is potential for impact to the Site should a release have occurred.

- A filling station was shown on historic Sanborn maps at the northeast corner of Mineola Ave and 1st St from 1950 to at least 1970. Based on the proximity to the Site, there is potential for impact to the Site, should a release have occurred.

- Heritage House, at 135 3rd Avenue, 0.017 miles west (across 3rd Avenue) of the Site and at a higher elevation relative to the Site. Spill No. 9401816 was opened due to tank test failure with a release of No. 4 fuel oil on May 6, 1994. The spill case was closed on January 29, 2004. Due to the proximity and duration of the spill case, this facility is classified as a REC.

- A dry cleaner was shown at the southwest corner of 2nd Street and Mineola Ave, in the 1970 Sanborn map. This facility was not identified in the historical dry cleaner database search. Based on the proximity to the Site, there is potential for impact to the Site should a release have occurred.

- A historic dry cleaning facility was identified on the HIST DRYCLEANERS database, located at 246 Cleveland Ave, at higher elevation and identified as J&A Cleaning Inc in 2007, 2008 and 2012. Based on the proximity to the Site, there is potential for impact to the Site, should a release have occurred.

- Winthrop University Hospital, located at 259 1st Street, 0.052 miles southwest and at higher elevation relative to the Site. This facility is identified on several databases, including AST, UST, LTANKS, NY SPILLS, LQG, NY MANIFEST and NJ MANIFEST. Based on the spill history, and large-quantity

generator status, along with the proximity and the upgradient setting of the facility, the hospital is considered a REC. Additional information from the databases is presented below.

- Ten ASTs are currently in-service at this facility: Tank 0050 is a 3,720-gallon No. 2 fuel oil AST; Tanks 0045, 0044, 0046, and 0049 are 240-gallon No. 2 fuel oil ASTs; Tank 0048 is a 280-gallon is a No. 2 fuel oil AST; and Tanks 0018, 0030, 0040 and 0042 are 275-gallon No. 2 fuel oil ASTs. No violations were identified in relation to the ASTs.
- The facility is listed on the UST database but no further information is provided.
- The facility is identified on the LQG databases as a historical generator of ignitable waste (D001), selenium (D010), spent nonhalogenated solvents (F003), warfarin & Salts (P001), arsenic oxide (P012), nicotine (P075), mitomycin C (U010), chlorambucil (U035), cyclophosphamide (U058), daunomycin (U059), melphalan (U150), phenol (U188), selenium sulfide (U205), streptozotocin (U206), barium (D005), chromium (D007), mercury (D009), silver (D022), m-cresol (D024), and undefined (D000). Additionally, this facility has been identified with following violations: records/reporting, pre-transport, TSD IS-Preparedness and preventions, and state statute. All cases associated with the violations have been satisfied or closed.
- The facility is listed on NY SPILLS for two historical spill cases, which are also summarized in the LTANKS listing:
  - Spill No. 9704765 was assigned for a release of 20-gallons of petroleum occurred due to equipment failure on July 21, 1997. Corrective action was taken and the spill was closed September 11, 1997.
  - Spill No. 8807720 was assigned for a release of approximately 1-gallon of non-PCB oil due to equipment failure on December 20, 1998. Corrective action was taken and the spill was closed on December 22, 1998.

Data Gaps

- To date, a response to the FOIL and OPRA requests submitted to Village of Mineola Clerk, Nassau County Clerk, Nassau County Fire Department, and the EPA have not been received. A response from this agency will be forwarded upon receipt with recommendations, if necessary.
- A response from the NYSDEC was received requiring additional information, which Matrix provided. A second response had not been received at the time of this report.
- An interview with personnel from the Town of Mineola was not completed and a request to Tom Rini, Superintendent, has not been returned.

- No exact address was given to Matrix from the client and so publicly available mapping services were used to determine the address. The potential addresses for this Site are 126 – 150 3rd Avenue (west side of the parking lot).

- The entirety of the Site was inspected during Matrix's walkthrough, though most of the Site was covered by parked cars, limiting a complete inspection.

8.0 DEVIATIONS

The Phase I ESA was performed in general accordance with the ASTM 1527-13 Standards as well as the detailed scope of services presented in Section 2.2 of this report.

9.0 ADDITIONAL SERVICES

No additional services were performed beyond the detailed scope presented in Section 2.2 of this report.

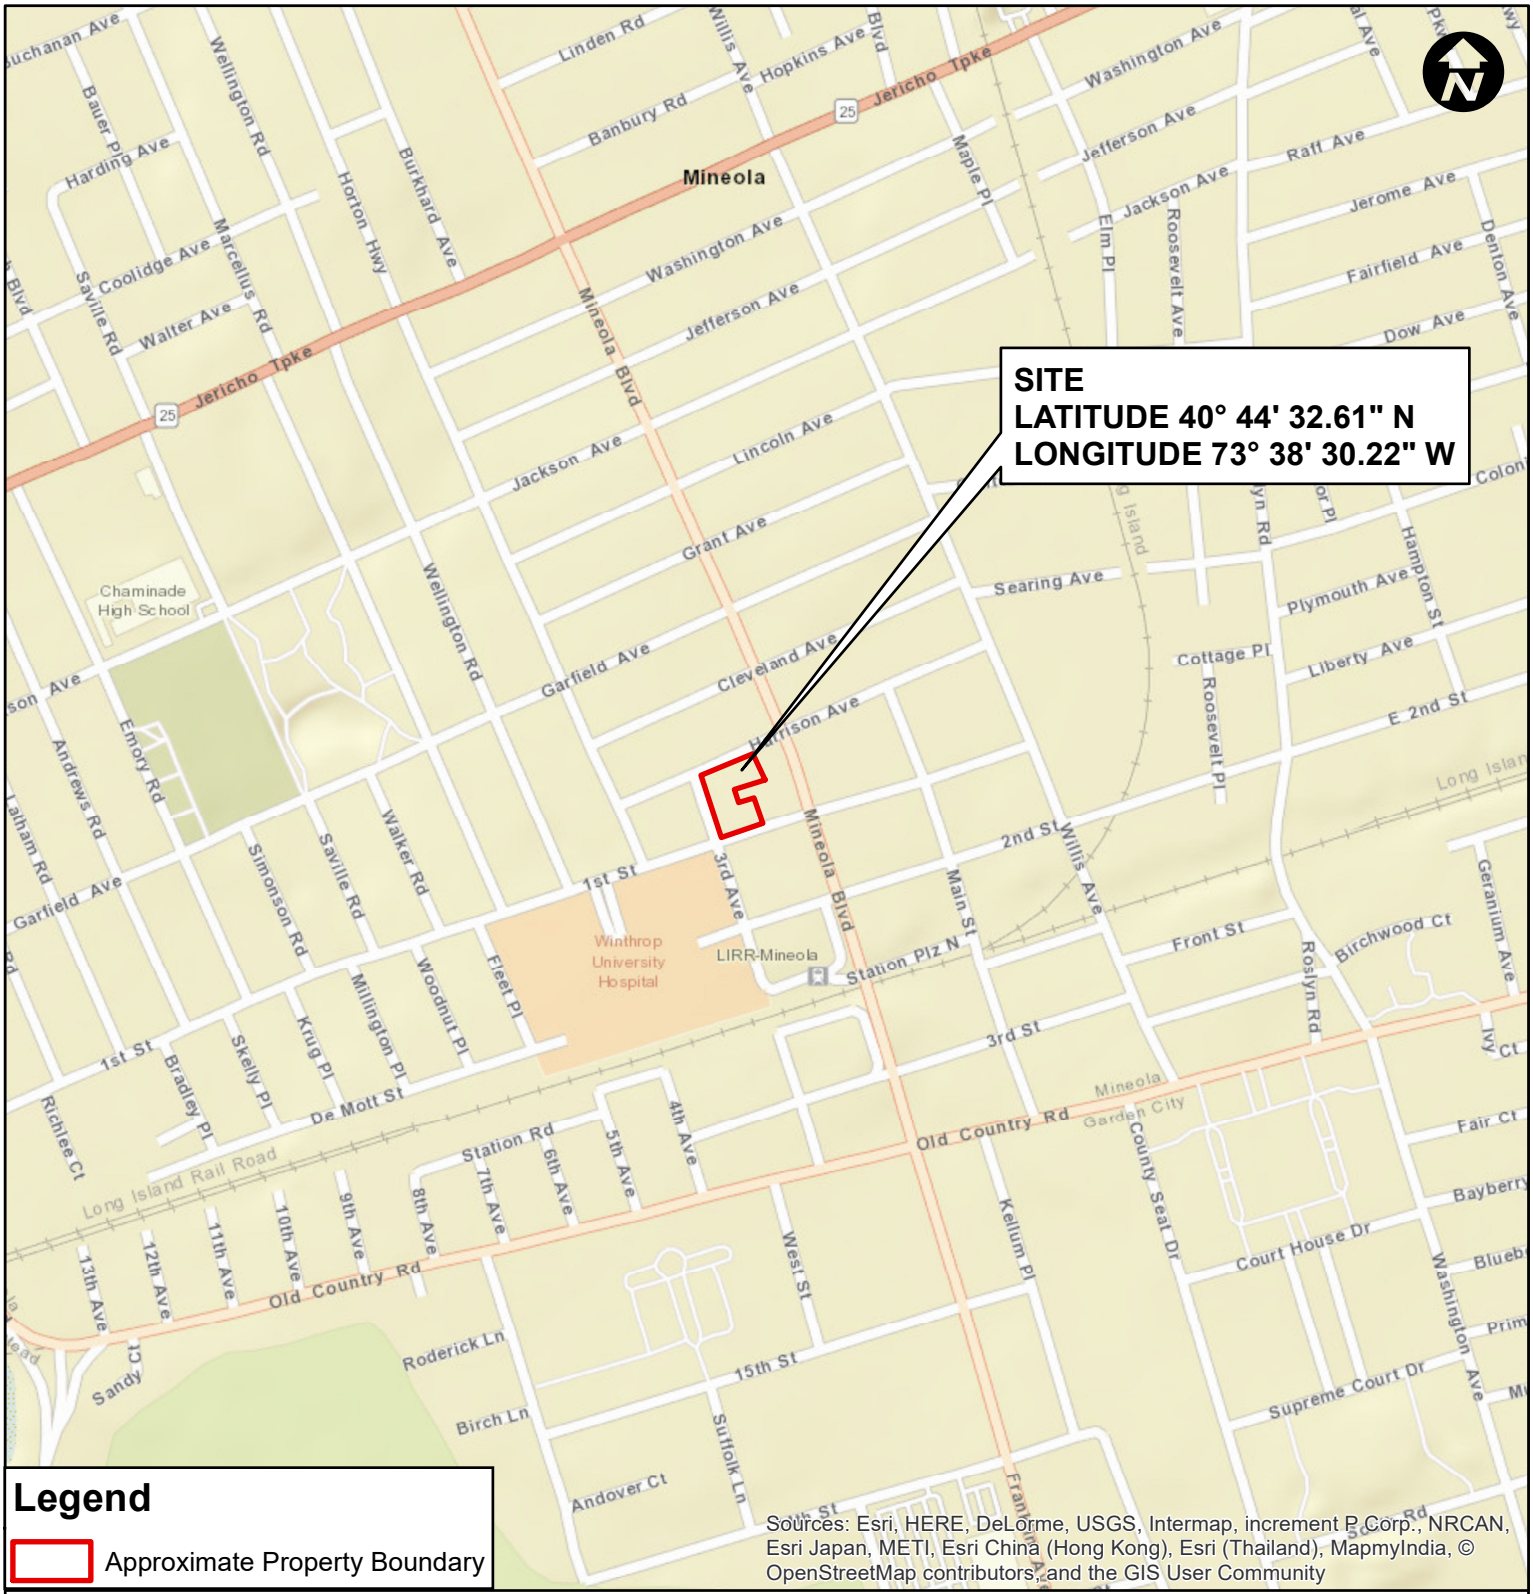
11.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Matrix declares, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and preformed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Tiffany Alves
Environmental Scientist

Brian Crespi
Project Manager

Mindy Chassin Horowitz
Program Director



12.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

TIFFANY ALVES
Environmental Scientist
Ms. Alves has over three years of experience in the environmental investigations including environmental oversight, environmental assessment, construction oversight, remediation, geotechnical, health and safety monitoring and due diligence projects under NJDEP, NYCDEP, and NYSDEC jurisdiction for commercial, industrial, and residential facilities. Ms. Alves experience includes, but is not limited to, soil, sediment, surface water and groundwater sampling, oversight of UST removal and temporary and monitoring well installations, soil classification, management, and processing of sample laboratory analyses. Ms. Alves is experienced in calibrating, maintaining, and using various field and laboratory instruments for monitoring levels of contamination. She has experience in the preparation of various environmental technical reports and permitting applications relative to Preliminary, Phase I and Phase II site remediation assessments and investigations throughout New Jersey and New York.

BRIAN CRESPI
Project Manager
Mr. Crespi has over eight years of experience in the environmental consulting field performing initial and remedial site assessments, hazardous materials assessments, construction oversight, health and safety monitoring, remedial design, and landfill gas evaluations. Mr. Crespi's areas of expertise include brownfield cleanup and redevelopment; investigation and remediation of sites with potential hazardous material contamination; litigation support for cost recovery and insurance matters; development of remedial cost estimates; and vapor intrusion assessments and remediation. Mr. Crespi has extensive experience conducting investigations for clients in both the public and private sectors, including projects focusing on railroads, landfills, industrial and commercial facilities, as well as impacts on neighboring or proposed residential development. Mr. Crespi has developed and directed the implementation of numerous soil, groundwater and vapor intrusion sampling programs for remedial investigations at industrial facilities being evaluated under the New York Spill Response Program and SRRA and ISRA in New Jersey. His environmental science and engineering background, along with varied experience in New York and New Jersey, provide the foundation to develop and implement investigation and remediation plans and develop the findings into reports for various state and federal regulatory programs. Mr. Crespi is certified through the NYC Mayor's Office of Environmental Remediation, as an OER Certified Brownfield Professional, to efficiently achieve brownfield cleanup and redevelopment on New York City Brownfield sites.

MINDY CHASSIN HOROWITZ
Project Director
Ms. Horowitz has over 20 years of experience in the environmental consulting field performing hazardous materials assessments, waterfront permitting, construction oversight and remedial design. Ms. Horowitz's areas of expertise include brownfield cleanup and redevelopment; investigation and remediation of New York City e-designation sites (sites with a zoning map amendment) with potential hazardous material contamination; stormwater pollution prevention; environmental due diligence of industrial, commercial, residential and mixed-use facilities; litigation support for cost recovery and insurance matters; and development of remedial cost estimates. She has extensive experience managing and conducting hydrogeologic investigations for clients in both the public and private sectors, including projects focusing on rail roads, highways, airports and industrial and commercial facilities. Ms. Horowitz has developed and directed the implementation of numerous soil, groundwater and sediment sampling programs for remedial investigations at industrial facilities being evaluated under ISRA. Her combined hydrogeological and geo-environmental engineering background, along with her varied experience in New York and New Jersey, enable her to compile and interpret analytical data to develop clear and technically defensible conceptual site models and incorporate these findings into reports for various state and federal regulatory programs. Mindy is certified through the NYC Mayor's Office of Environmental Remediation, as an OER Certified Brownfield Professional, to efficiently achieve brownfield cleanup and redevelopment on New York City Brownfield sites.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/05/2016 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

GENESCO INC. SITE 11	***150 FULTON AVENUE***	***WSW 1/2 - 1 (0.908 mi.)***	***0***	***8***

Federal Delisted NPL site list

Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

A review of the Delisted NPL list, as provided by EDR, and dated 12/05/2016 has revealed that there is 1 Delisted NPL site within approximately 1 mile of the target property.

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains

data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 10/10/2016 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

WINTHROP UNIVERSITY	*259 1ST ST*	*SW 0 - 1/8 (0.052 mi.)*	*C14*	*76*

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/14/2016 has revealed that there are 11 NY SHWS sites within approximately 1 mile of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 06/01/2016 has revealed that there is 1 NY VAPOR REOPENED site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/06/2017 has revealed that there are 46 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 11 NY UST sites within

approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, and dated 11/14/2016 has revealed that there is 1 NY

VCP site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 02/06/2017 has revealed that there are 20 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/12/2016 has revealed that there are 17 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY DRYCLEANERS: A listing of all registered drycleaning facilities.

A review of the NY DRYCLEANERS list, as provided by EDR, and dated 10/27/2016 has revealed that there are 2 NY DRYCLEANERS sites within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
LILCO GARDEN CITY	HILTON AVENUE AND 11	S 1/2 - 1 (0.841 mi.)	119	409

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical

Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 4 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Summary Details:

Conditions at Proposal September 1997): The Fulton Avenue site is located on the west central portion of the Garden City Industrial Park. This property has been active since the early 1960s, and various tenants have occupied the property sincethat time including Genesco, Inc. 1964 to 1976), Halperin Knitting Mills 1975 to 1976), Robelan Displays, Inc. 1977 to an unknown date), and Cymann Designs, Inc. 1988 to present). Halperin Knitting Mills operated as a cutting mill. Knit fabrics were received in tubular form and the fabrics were then cut, cleaned, and sewed together. Waste products generated by Halperin included waste oils from the dry cleaning operation. Robelan Displays, Inc., manufactured displays at the site. Materials utili ed in this process included paints and lacquer thinners. Cymann Designs is a furniture distribution warehouse. In 1985, during a Nassau County Department of Health NCDH) ground water contamination study, the Garden City IndustrialPark was identified as a potential source for volatile organic compound VOC) contamination in the ground water. In 1991, the NCDH, together with the Nassau County Department of Public Works NCDPW), conducted a ground water study of the Garden City Industrial Park. During this investigation, twelve additional monitoring wells were installed within and downgradient of the park, and two monitoring wells were installed upgradient of the park. Two rounds of samples were collected from these wells, as well as the existing wells, and analysis indicated the presence of VOCs, including tetrachloroethene PCE). In 1994, a Preliminary Site Assessment PSA) was conducted by the New York State Department of Environmental Conservation NYSDEC). The study area investigated during this PSA included approximately 40 acres of the Garden City Industrial Park. During the PSA 61 ground water samples were collected and analy ed at an on-site mobile laboratory. Analysis of the ground watersamplesindicated the presence of numerous VOCs, including PCE and trichloroethene TCE). Based on these results, it was alleged that a source entry for the PCE contamination is present at 150 Fulton Avenue. Also as part of the PSA, an industrial survey was conducted by NYSDEC at several facilities within the Garden City Industrial Park, including Cymann Designs, Inc. Cymann Designs, Inc. is a wholesale distribution warehouse that reportedly does not use any chemicals in their business.Prior to Cymann Designs, Inc. a dry cleaner of cloth material occupied the building. In 1995, NYSDEC conducted additional sampling at the Garden City Industrial Park. One of these samples included a sediment sample collected from a dry well located at 150 Fulton Avenue. Analysis of this sample indicated the presence of 5,300,000 parts per billion of PCE. On June 18, 1996, a cooperative sampling event was conducted for the Fulton Avenue site by NYSDEC and EPA. During this sampling event, ground water samples were collected from several monitoring wells located within the Garden City Industrial Park. Analysis of the samples collected from these wells indicated the presence of PCE, TCE, and 1,2-dichloroethene total) in wells downgradient of the dry well located at 150 Fulton Avenue. Drinking water wells tapping the Upper Glacial - Magothy Aquifer System within four miles of

GENESCO INC. SITE 11530 (Continued) **1000855816**

the site serve an aggregate population of 100,528 people. The site is located over a NewYork State-designated Wellhead Protection Area. Status March 1998): Currently, two Interim Remedial Measures IRMs) are planned for the site, one for soils in the immediate vicinity of the dry well, and a second for nearby ground water. Thesoil IRM will consist of removing contaminated sediments and soils from the base of the dry well, remediating the deep soils using two technologies entitled Air Sparging/Soil Vapor Extraction AS/SVE). The design for the soil IRM is currently underreview. The nearby ground water within the shallow Upper Glacial aquifer will be remediated using an in-well air-stripping system. The conceptuali ation for this remediation technology is currently being prepared. The Remedial Investigation/Feasibility Study RI/FS) workplan is currently being reviewed. The description of the site release) is based on information available at the time the site was scored. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices.

Site Description: The Fulton Avenue Superfund Site (the Site) includes a 0.8-acre property located at 150 Fulton Avenue, Garden City Park, Nassau County, New York (hereinafter, the Fulton Property), all contamination emanating from the Fulton Property, as well all other contamination impacting the groundwater in the vicinity of the Fulton Property including an overlapping TCE-dominant plume in the Upper Glacial and Magothy aquifers, whose origin is currently unknown, and all sources of this contamination. The Fulton Property is owned by Gordon Atlantic Corporation. It is located within the Garden City Park Industrial Area (GCPIA), Village of Garden City Park, Town of North Hempstead, Nassau County, New York. A fabric-cutting mill operated at the Fulton Property from approximately January 1, 1965 through approximately December 31, 1974, and these operations included dry-cleaning of fabric with tetrachloroethylene (PCE). Currently, the Fulton Property is occupied by a business support company. Approximately 208,000 people live within three miles of the Fulton Property. There are about 20,000 people living within a mile of the Fulton Property. Residents within the area obtain their drinking water from public supply wells. The vicinity of the Fulton Property is industrial but residential areas are immediately adjacent to the industrial area. The Site is situated

GENESCO INC. SITE 11530 (Continued) **1000855816**

in the outwash plain on Long Island, New York. Approximately 500 feet of interbedded sands and limited clay lenses overlay Precambrian bedrock. There are three aquifers that exist beneath the Site, two of which are affected. The Upper Glacial aquifer is the surficial unit which overlies the Magothy aquifer. The Magothy is the primary source for public water in the area. No impeding clays were observed between the Upper Glacial and Magothy aquifers within the study area (the entire area investigated during the Operable Unit I [OU-I] Remedial Investigation [RI]). Beginning in 1986, numerous investigations were conducted by the Nassau County Departments of Health (NCDH) and Public Works (NCDPW) to identify the source(s) of chlorinated volatile organic compounds (VOCs) impacting numerous public supply wells located downgradient of the GCPIA. Based on the results of these investigations, the New York State Department of Environmental Conservation (NYSDEC) placed the Fulton Property on the Registry of Inactive Hazardous Waste Disposal Sites in New York State and conducted an investigation of the GCPIA which was finalized in late 1996. On March 6, 1998, EPA placed the Site on the National Priorities List (NPL) of hazardous substance sites under CERCLA. Thereafter, NYSDEC, as the lead regulatory agency, oversaw the implementation of a Remedial Investigation and Feasibility Study (RI/FS) and an Interim Remedial Measure (IRM) described below. In 1999, under an Administrative Order with NYSDEC, a Potentially Responsible Party (PRP), Genesco, Inc., contracted a contractor to conduct an RI/FS of the Site. The purpose of the RI was to define the nature and extent of contamination at the Site. Field work for this effort began with the drilling of vertical profile wells in early 2000. During the RI, 20 monitoring wells were installed in three separate mobilizations within a study area which extended approximately north to Jericho Turnpike, south to Cambridge Avenue, east to Herricks Road, and west to New Hyde Park Road (hereinafter, the Study Area). Following the first two successive field mobilizations of monitoring well installation and sampling, the first draft RI was submitted to NYSDEC and EPA in August 2002. Evaluation of the findings contained in the August 2002 Draft RI led to NYSDEC and EPA requiring further work to better delineate the downgradient extent of the contaminant plume. In the Spring of 2003, two eight-zone monitoring wells were installed downgradient of Garden City Water District wells 13 and 14. In August 2005, an updated draft RI was submitted to NYSDEC and EPA. Although the document did not fully define the nature and extent of contamination at the Site, this document was revised and approved by NYSDEC in November 2005 and EPA determined it was sufficient for purposes of the first operable unit. The PRP also conducted an IRM from August 1998 to December 2001 to remove contaminants from an original dry well on the Fulton Property in, order to prevent further contaminant migration into the aquifer and into the indoor air at the Fulton Property facility. Following the excavation of contaminated soils from the bottom of the drywell, a soil vapor extraction (SVE) system was installed to address residual soil contamination and operated until the soil vapor contaminant concentrations met New York State Department of Health (NYSDOH) guidance values. Over 10,000 pounds of PCE were removed from the source area at the Fulton Property during the operation of the SVE system. Following this action, the PRP installed a sub-slab depressurization system under the building at the Fulton Property to provide additional protection to the occupants from exposure to the contamination. This system remains in operation. Once adequate data were collected during the RI, the evaluation of remedial alternatives for the FS was begun. A draft FS was received by EPA and NYSDEC in February 2006. A revised second draft of the FS was resubmitted in July 2006. In February of 2007, EPA produced an addendum to the FS to clarify issues in the second draft of the FS. The draft FS and addendum were approved by NYSDEC on February 15, 2007. NYSDEC and EPA agreed that EPA would be designated as the lead agency for the Fulton Avenue Site at the conclusion of the RI/FS process discussed above. The land uses within

GENESCO INC. SITE 11530 (Continued) **1000855816**

the Study Area are a mix of residential, commercial, and industrial. All groundwater in New York State is classified as GA, which is groundwater suitable as a source of drinking water. Groundwater in the immediate vicinity of the Site is currently used as a source of drinking water and there is also a future potential beneficial use of groundwater at the Site as a drinking water source. Public water supply wells of the Nassau County Water Authority are located approximately one mile southwest of the Fulton Property. A Record of Decision addressing OU-1 was completed in September 2007.

Site Description: This facility is located in the Garden City Park Industrial Area in North Hempstead. The Nassau County Department of Health identified the Garden City Park Industrial Area as a possible source of groundwater contamination in the report entitled "Investigation of Contaminated Aquifer Segments, Nassau County, New York, 1986." A subsequent investigation done by the Nassau County Department of Health and the County Department of Public Works identified a significant plume of tetrachloroethene (PCE at levels up to 51,210 ppb) and other semivolatile organics in the groundwater. The DEC completed a PSA in 1994 that identified the facility at 150 Fulton Avenue as the primary source for the tetrachloroethene. Historical information indicates that a former occupant of this facility used PCE in cutting mill operations. In 1995, environmental sampling confirmed the presence of high levels of tetrachloroethene in the sediments found in a dry well at the site. The PCE was the

GENESCO INC. SITE 11530 (Continued) **1000855816**

source of groundwater contamination attributable to this site. The contamination has migrated more than 5600 feet downgradient. A soil vapor extraction/air sparging system IRM operated at the site from 1998 until December 2001. The PRP removed the SVE and air sparging system and installed a sub-slab depressurization system to address the concern of residual soil vapors impacting the indoor air (03/04). The responsible party funded the RI/FS at the site. The field work for this remedial investigation began in mid-December 1998. This site was nominated to the NPL in March 1997 and became a Federal Superfund Site effective April 1, 1998. The 150 Fulton Ave. facility and its associated plume of contaminated groundwater is referred to as Operable Unit 1 (OU 1). The NYSDEC oversaw the completion of the RI/FS under the NYSDEC Order on Consent and then transferred project management to USEPA for remedial design and remedial action (RD/RA). The EPA has issued the OU 1 ROD. The OU1 ROD calls for groundwater extraction and treatment, in-situ chemical oxidation for the source area and wellhead treatment for the village of Garden City. The USEPA is also conducting an OU2 RI/FS to identify any additional sources of groundwater contamination from the unidentified side-gradient source(s) of trichloroethene impacting the Franklin Square Water District. The potential responsible party entered into a unilateral administrative order (UAO) filed by the US Dept of Justice. The EPA has issued a work assignment for the OU2 field work. The consultant prepared a work plan (11/09) that was approved. This work includes additional source area investigation for the TCE plume which does not originate at 150 Fulton Ave. and a soil vapor investigation. Field work for the OU2 study is ongoing. EPA is using some of the newer environmental forensics techniques in the ongoing attempt to locate additional solvent sources of contamination to the groundwater. The USEPA prepared a ROD amendment for OU1 and released it with a public meeting in April 14th 2015. The USEPA executed the ROD amendment in September 2015.

Env Problem: The groundwater has been heavily impacted with perchlorethene (PCE) from the 150 Fulton Ave. site (Operable Unit 1). There are also impacts from other volatile organic compounds (VOCs, mainly TCE, from unidentified side-gradient sources(Operable Unit 2). The contaminant plume has impacted the sole source aquifer downgradient of the site. The PRP operated an IRM consisting of a soil vapor extraction system and an air sparging unit. This IRM addressed soil contamination and shallow groundwater contamination beneath the site. The PRP also installed an IRM consisting of a wind-driven Sub-Slab depressurization system to address residual volatile vapors beneath the 150 Fulton Avenue building.

Health Problem: Since the site is covered by asphalt or pavement, people will not come into contact with site-related contaminated soils or contaminated groundwater unless they dig below the ground surface. People are not drinking the contaminated groundwater because municipal water suppliers have taken appropriate actions (such as treating the groundwater to remove contaminants prior to distribution or removing wells from service) to ensure that the public water supply continues to meet drinking water standards. Volatile organic compounds in contaminated soils or contaminated groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. A passive sub-slab depressurization system (system

GENESCO INC. SITE 11530 (Continued) **1000855816**

that removes air from beneath a building) has been installed in the on-site structure to prevent indoor air quality from being affected by soil vapor intrusion. The potential exists for soil vapor intrusion to impact indoor air quality in off-site structures.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at Proposal October 22, 1999): The Jackson Steel site is an inactive roll form metal shapes manufacturing facility located in Mineola/North Hempstead, Nassau County, New York. It is not known when Jackson Steel began operating; however, they submitted a form/application to the Nassau County Health Department on October 19, 1977. Jackson Steel reportedly ceased operations at the site in April 1991. Degreasers, including tetrachloroethylene also referred to as perchloroethylene PCE)), trichloroethylene TCE), and 1,1,1-trichloroethane TCA), were used at the site until March 1985. Degreasing sludge was stored in drums on a paved area located southwest of the building. The site property is bordered to the northwestby First Street, to the northeast by an apartment building, to the southeast by a billiard parlor and an electronics store, and to the southwest by a paved parking area, law offices, and a bar/restaurant. The site is located on the edge of a mixed-use area, with commercial and industrial properties located to the south and west and residential properties located to the north and east. The Nassau County Department of Health conducted numerous inspections of the Jackson Steel site between1979 and 1996; improper spill control at the waste storage area was noted once, in 1981, during the period when degreasers were used on site. A Limited Phase II Assessment of the Jackson Steel site was performed in December 1991. During this inspection, a third dry well was observed in the building, in the loading dock. Soil samples collected beneath the dry wells indicated the presence of PCE, TCE, 1,1,1-TCA, 1,2-dichloroethylene DCE), and 1,1-dichloroethane DCA) at depths up to 17 feetbelow ground surface. 1,2-DCE is a degradation product of TCE and PCE and 1,1-DCA is a breakdown product of PCE, TCE, and 1,1,1-TCA. A reconnaissance of the site was conducted in November 1992 as part of an Environmental Site Investigation ESI). Numerous stained areas and puddles were observed in the building. Drums containing petroleum products were stored in the building and on the paved area. The dry wells were partially filled with liquid and a 275-gallon degreasing tank was observed in close proximity to the dry well located in the loading dock. Between December 1992 and February 1993, numerous samples were collected in, around, and below the dry wells and nine ground water samples at the site. The analytical results reportedly indicated the presence of PCE, TCE, 1,1,1-TCA, and 1,2-DCE at depths up to 40 feet below the ground level and PCE, TCE, 1,1,1-TCA, 1,2-DCE, and 1,1-DCA in ground water collected from monitoring wells located downgradient of the dry wells. The ESI report suggests that a release of PCE, TCE, and 1,1,1-TCA to ground water has occurred from the site. Drinking water within 4 miles of the site is derived from public/municipal supply wells screened in the Upper Glacial, Magothy, and Lloyd Aquifers. The nearest well drawing from the

JACKSON STEEL (Continued) **1000272610**

aquifer of concern is located approximately 3,100 feet south and side-gradient to the site. Potable wells within 4 miles of the site, and drawing from the aquifer of concern, serve over 300,000people. Status February 2000): EPA is considering various alternatives for this site. The description of the site is based on information available at the time the site was scored. The description may change as additional informationis gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices.

Site Description: The Jackson Steel Site includes a parcel of property located at 435 First Street in Mineola, Town of North Hempstead, Nassau County, New York in a residential/commercial area. The 1.5-acre property contains a one-story 43,000-square-foot building formerly used as a metal-forming facility and an approximately 10,000-square foot paved parking area. The building consists of two sections-the original building, constructed in 1959, is located closer to First Street, and the newer section, which was added in 1963, is at the rear. The former office space is located along the north wall, and a loading dock is located in the southwest corner of the front section of the building. The building is currently inactive and predominantly empty, except for miscellaneous small equipment and supplies abandoned by interim tenants of the building. An old vertical aboveground storage tank-possibly used to store degreasing substances-is situated in the front section of the building next to the former offices. A trench is located in the floor along the inside western wall of the building extension, above which a degreasing station is suspected to have been located. Two sumps are located in the front section of the building behind the former office space. One sump is located under the heater and the other one is located along the eastern wall of the main building. A third sump is located outside the building, near the main entrance. A fence extends along the southern border of the parking area and separates the Jackson Steel Site's parking lot from the adjacent commercial property's parking lot. A narrow strip of unpaved soil is also located along the east wall of the building, between the building and the wooden fence separating the Jackson Steel property from the adjacent apartment complex. Subsurface features include two dry wells designed to collect stormwater runoff located under the parking area to the west of the building and a third dry well located under the loading dock area. The Site is bordered to the north by residential, single-family dwellings, to the east by multiple-family dwellings in a two-story apartment complex, to the south by a former billiards parlor and a building that housed a daycare center until April 2002, and to the west by an office building and restaurant. Herricks Road to the west has predominantly commercial properties on both sides of the heavily traveled road. Village of Mineola supply well #4 and Garden City Village supply well #12 are located within a half-mile radius of the Site (east-southeast or side-gradient of the property). There are no private wells in the area. Area residents utilize

JACKSON STEEL (Continued) **1000272610**

municipal water. The property, which has been used for industrial/commercial purposes since it was constructed, has been zoned for a number of different uses through the past several decades. The property is presently zoned B-1 for business use as retail or office space. The Village of Mineola is currently reviewing its master plan; there is likelihood that the Jackson Steel property may be rezoned "residential" in the near future. The property was used from the mid-1970s until 1991 as a "roll form metal shapes" manufacturing facility. Degreasers, including tetrachloroethene (PCE), trichloroethene (TCE), and 1,1,1-trichloroethane (TCA), were used at the facility until 1985. Sludges from degreasing equipment were stored in drums and in an on-property 275-gallon tank. The analytical results from samples collected by the Nassau County Department of Health (NCHD) in the early 1990s from within, around, and below three on-property dry wells indicated the presence of PCE, TCE, 1,1,1-TCA, 1,2-dichloroethylene (DCE), and 1,1-dichloroethane (DCA) at depths down to 40 feet below the ground surface. PCE, TCE, 1,1,1-TCA, 1,2-DCE, and 1,1-DCA were also detected in groundwater samples collected from monitoring wells located downgradient of the dry wells. Dumping of wastes into the dry wells and spills and leaks from drums storing various chemicals during the facility's operations are the likely sources of the contamination found at the Site. In October 1999, the Site was proposed for placement on EPA's Superfund National Priorities List (NPL). On February 4, 2000, the Site was listed on the NPL. EPA initiated a search to identify Potentially Responsible Parties (PRPs) in January 2000. Viable PRPs have not been found. Following commencement of fieldwork in October 2001, because of concerns about the proximity of the Site to a daycare center, NCHD performed air sampling inside the daycare center's building. The air samples detected PCE at levels below the Health Department's guideline for indoor PCE exposure. The levels were also within EPA's acceptable cancer and noncancer risk ranges. Given the sensitivity of the population exposed (preschool children), the Health Department collected additional samples in mid-December 2001. At that time, indoor testing was also conducted inside the Jackson Steel building and a restaurant located adjacent to the Site. The results, which were received in mid-January 2002, indicated that PCE levels in the indoor air of several rooms in the daycare center were above the Health Department's guideline for indoor PCE exposure. In addition, the maximum PCE level exceeded EPA's acceptable noncancer risk level. Low levels of PCE were detected in air samples from the Jackson Steel building and the restaurant. After receiving the daycare center's sampling results, EPA's emergency response team installed a vacuum extraction system under the concrete slab of the daycare center to prevent any contaminants from entering the building in case the soil and groundwater under the building were the source. In addition, in order to provide fresh air circulation in the building, the daycare center's contractor installed a ventilation system. Samples taken to assess the effectiveness of the measures implemented showed that the PCE levels in the air were significantly below the New York State Health Department guideline and below EPA's acceptable noncancer risk levels. Because elevated PCE levels were detected in a former billiards club which shares common walls with the Jackson Steel Site building and the former daycare center, EPA installed a vacuum extraction system under the concrete slab of both buildings. In addition, ventilation systems were installed in those buildings. A Remedial Investigation (RI) was conducted from 2001 to 2002 to determine the nature and extent of the contamination at and emanating from the Site The Village of Mineola is currently reviewing its master plan; there is a likelihood that the Jackson Steel property may be rezoned "residential" in the near future. The groundwater underlying the Site and downgradient is contaminated. Potable water for the Site and downgradient areas is obtained from public-supply sources. Although it is not likely that the groundwater underlying the property will be used for potable purposes in

JACKSON STEEL (Continued) **1000272610**

the foreseeable future, regional groundwater is a sole source of potable water and is designated as a drinking water source by New York State Department of Environmental Conservation (NYSDEC). A Record of Decision (ROD) addressing operable unit (OU) 1 was completed in September 2004. The cleanup of the building, the excavation and removal of the contaminated soil and the contaminated materials from the sumps and the trench inside the building and from the dry wells were completed in early 2006 (170 cubic yards of material were excavated and disposed of). The in-situ soil vapor extraction (ISVE) system, which began operation as a pilot-scale treatability study in July 2005, has, to date, removed approximately 55 pounds of volatile organic compounds (VOCs) from the soil. It is anticipated that the ISVE system will continue to operate for an additional two years before the cleanup goals have been met. Periodic injections of chemicals via a network of 20 injection wells as part of the in-situ chemical oxidation (ISCO) treatment of the Upper Glacial Aquifer at the site are currently underway. Postinjection analytical results from the Upper Glacial Aquifer (April 2007) indicate that the treatment has been effective in reducing contaminant levels. A supplemental groundwater investigation was conducted from March 2005 to September 2006 in an attempt to determine the source of the Magothy Aquifer contamination underneath the site and to establish whether there is a relationship between the contamination at the site and the VOC contamination detected in a nearby municipal well (before treatment). As part of this investigation, six monitoring wells were installed. Three wells were installed in the Magothy Confining Bed at the location of the on-site dry wells. Three additional wells were installed off-site into the Magothy Aquifer. One well is located approximately 300 feet northeast of the site. This well is considered upgradient under regional flow conditions and side gradient when the municipal well is pumping. The second monitoring well is located southwest of the site. This well is considered downgradient under regional flow conditions and side gradient when the municipal well is pumping. The third well is located between the site and Mineola's municipal well, approximately 1,200 feet southeast of the site. This well is considered side gradient under regional flow conditions and downgradient when the municipal well is pumping. The investigation indicates that because of the industrial/ commercial nature of the area, multiple unknown sources appear to contribute to the contamination in the lower reaches of the Magothy Aquifer underlying the site. The investigation showed that the levels of contamination in the Magothy Aquifer increase or decrease in response to whether or not the municipal well is operating. In addition, VOCs were not detected in the three monitoring wells that were installed at various depths in the Magothy Confining Bed underlying the location of the two former dry wells where the disposal of chemicals occurred. In an on-site monitoring well located downgradient or side gradient of the dry wells (depending on whether or not the municipal well is operating), the maximum TCE concentration was 1.6 ug/l and the maximum PCE concentration was 1.2 ug/l (the state and federal groundwater standards for TCE and PCE is 5.0 ug/l). In comparison, the levels of contamination in the underlying Magothy Aquifer, at a depth of 454 feet, ranged from 95-330 ug/l TCE and 78-150 ug/l PCE. An Explanation of Significant Differences (ESD) addressing OU 1 was completed in August 2007.

Updated By: DJEVANS
Site Description: Location:The Jackson Steel Site is located in an urban area. It is on the southern side of First Street and the Eastern side of Herricks Road. It is located about 1,000 ft. east of the Fulton Avenue class 2 site, a recent addition to the Federal National Priorities List, which is situated in the Garden City Park Industrial Area. Site Features:The main site feature is a 30,000 square foot one story former manufacturing building, constructed in 1959, and a 13,000 square foot back section that was added in 1963. Current Zoning and Land Use:Jackson Steel ceased operations in 1991. The building currently houses a Soil Vapor Extraction system that is operated by USEPA. A restaurant and offices are located immediately west of the site. An industrial park is located west of Herricks Road. Residences are located immediately east of the site, and mixed business / residential on the north side of First Street. The Long Island Railroad is located south of the day care.Past Use of the Site:The property was used from the mid-1970s until 1991 as a "roll form metal shapes" manufacturing facility. Degreasers, including tetrachloroethylene (PCE), trichloroethylene (TCE), and 1,1,1-trichloroethane (TCA), were used at the facility until 1985. Sludges from degreasing equipment were stored in drums and in an on-Site 275-gallon tank. Dumping of wastes into the dry wells, spills, and leaks during the facilitys operations and from drums storing various chemicals are the likely sources of the contamination found at the Site.In December 1991, a limited environmental assessment of the former Jackson Steel Products property was conducted by Geraghty & Miller, Inc., environmental consultants. A Nassau County Department of Health (NC DOH) survey inspection was conducted at the site in May 1994. In October 1999, the Site was proposed for placement on EPAs Superfund National Priorities List (NPL). On February 4, 2000, the Site was listed on the NPL.Site Geology and Hydrogeology:Site geology consists of three units: the Upper Glacial Aquifer, the Magothy Confining Bed, and the Magothy Aquifer. The Upper Glacial unit consists predominantly of varying

JACKSON STEEL (Continued) **1000272610**

consistencies of intermixed to interbedded, brown-orange-yellow sands and gravels that extend to a depth of approximately 105 feet below ground surface (bgs). Some silts were observed mainly near the ground surface, but also in smaller quantities deeper in the formation, and in minor lenses throughout. Little to no clay was observed. Groundwater beneath the Jackson Steel site occurs within the Upper Glacial Aquifer at approximately 50 feet bgs. In this aquifer, a very slight, upward gradient exists but this gradient is negligible when compared to the dominant southwest horizontal groundwater flow.At approximately 105 feet bgs, the top of the Magothy Formation was encountered. The top of the formation consists of characteristic fine to medium sands interbedded with clay and sandy-silty clay, with gray coloration, and the presence of organic lignite (wood) fragments. The classic medium-to-coarse grained, gray sand of the Magothy Formation was observed below the silty-clay unit, beginning at 401 feet bgs at the site. The Magothy Confining Bed has a relatively low permeability and transmissivity resulting in its function as a semi-confining layer separating the transmissive Upper Glacial and Magothy aquifers. A downward groundwater flow gradient was noted within the bed. In the Magothy Aquifer, the trend for downward flow observed in the Magothy Confining Bed continued, but at a lower gradient. Similar to the Upper Glacial Aquifer, the horizontal southwest groundwater flow in this unit is again anticipated to dominate over the vertical flow.

Env Problem:	This property is near an industrial area in which high levels of contamination have been identified and a significant source was pinpointed. The chemicals found at Jackson Steel are similar, and appear to be the source of a separate, probably parallel plume, which may also overlap further downgradient, thereby amplifying the threat to several public supply wells.
Health Problem:	Drinking contaminated groundwater is not expected because public water serves the area. The on-site soil vapor extraction system is designed to protect occupants of the on-site building and two adjacent off-site buildings from exposure via soil vapor intrusion.

SUPERFUND NPL

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

JACKSON STEEL (Continued) **1000272610**

corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to

ONCOGENE SCIENCE INC (Continued) **1000332483**

replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Registry ID: 110009469627

Contact Name:	JOHN RAGLUND
Contact Phone:	(631) 249-4141
DEC Memo:	"OVERFILL 04/23/15 1430 Hrs (A): Called Raglund- he said this is an APARTMENT BUILDING, and the tank is in the basement. 04/23/15 1430 Hrs (B): APPARENTLY THE HI-LEVEL ALARM FAILED, and oil spilled out of the vent into the secondary containment (he believes the tank is in a concrete vault). 04/23/15 1430 Hrs (C): The Nassau County Fire Marshal and the Fire Department are on site, and MILRO ASSOCIATES is enroute to vacuum the oil out of the containment and perform any additional cleanup required. RAGLUND DOES NOT KNOW WHETHER THERE HAVE BEEN ANY ODOR COMPLAINTS. DR 04/23/15 1435 Hrs: Advised BD (after-hours responder). DR 04/23/15 1434 Hrs: Received emailed update from Spills Hotline- 'MENNELLA ADVISED TO CORRECT AMOUNT THAT WENT INTO THE SECONDARY CONTAINMENT TO 1500 GALS.' DR . 04/23/15 1500 Hrs: BD called Mennella directly to discuss the situation. 4/23/2015 15:00 Brian D. t/c From Mike Mennella, NCFM -2200 gallons delivered. -3300 gallon AST located at the garage level. -Perillo overfilled the tank. The oil came out of the emergency vent on the tank. -No spillage outside. -Whitenesses stated that they heard the electric overfill alarm sound, but the driver continued to deliver. -The tank is in a concrete block containment. -Milro is on site and recovering the oil within the containment. -No DEC response needed at this time. 4/24/15 09:41 NH spoke with John Perillo bros..800 gallons spilled into the containment area as per previous notes . Milro responded did all the cleaned up and are going back a second time to power wash the containment and remove the blowers. If assigned please call 631-249-4141 John from perillo Bros Met M.J.Raglund in Perillo s office in Farmingdale, analyses of delivery tickets demonstrated that 800 gal. of oil recovered by Milro is consistent with excess spilled through pressure relief valve on the tank. Al of the spilled product has been recovered from secondary containment. Cleanup has been completed, no further action required (VP)"
Remarks:	"Caller advised possible overfill of 200 gal of oil into a secondary containment. no resources affected. Clean up is pending."

Kevin unaware of reported spill - will investigate and call back. @1500 T/C with Dan @Perillo Bros. who states discharge is less than 20 gallons inside basement. Dan unable to provide volume of intended delivery or volume of actual delivery. He states his drivers routinely deliver until high level alarm and/or vent whistle sounds. Tank was not gauged prior to delivery. Product is reported to be leaking out of secondary containment dyke. (3)Perillo techs onsite - Milro is enroute for further cleanup. Dan states it is a special

NASSAU TOWERS (Continued) **S110308234**

vaulted tank with volume of 3,342 gallons. @1510 T/C with Kevin Cane @Winthrop Property Management. NCFM is onsite. Discharge volume is estimated @150 gallons. Speedy-dry has been deployed onto concrete surfaces. Milro enroute. By VP 04/22/10 @9;00 inspected; met Kevin Kane, mgr Secondary containment affected only, Milro responded to the release at the Nassau Towers 4/21/10. Oil was recovered from the floor using a vactruck. The spill area in the vault was pressure washed. Milro recovered 285 gallons of oil and oil contaminatedwater from the area. The building maintenance used their own ventilation equipment. Cleanup has been completed, no further action required. "

DEC Memo:	"10/08/12 @16:10 t/c to notifier; by S.Witt 275 AST in the basement released some oil, Petro plumber stopped the leak, Milro on the way with temp tank. (VP) 10/09/12 1105 Hrs: Checked internet for Peykar's address. DR 10/24/12 0915 Hrs: DOT NAPOLI (MILRO ASSOCIATES) left message. DR 10/24/12 0930 Hrs: Left message for Napoli. DR 10/24/12 0940 Hrs (A): Napoli called- THE OIL IMPACTED TWO ROOMS. The impacted area in one room was approximately 10ft x 7ft, and in the other room approximately 11ft x 11ft. 10/24/12 0940 Hrs (B): They found cracks in the floor, so they performed SIX borings through the floor to check for subsurface contamination. They checked the soil at 1.ft deep and 3ft deep, and the PID readings ranged from 7ppm to 168ppm. 10/24/12 0940 Hrs (C): DEC informed her the file would be updated and given to a supervisor for review, and directed her to call back later this week to determine whether an inspector had been assigned to the case. DR 01/24/13 1515 Hrs (A): Napoli called to determine whether an inspector had been assigned to the case- informed her the case was still unassigned. 01/24/13 1515 Hrs (B): She said they have been hired to perform the cleanup. They will be excavating TWO area, one approximately 11ft x 11ft and the other approximately 7ft x 10ft; she suspects the DEPTH will be 3-4ft. 01/24/13 1515 Hrs (C): DEC informed her the file would be updated and given to a supervisor for review, and directed her to call back next week to determine whether an inspector had been assigned to the case. DR 1/24/13: FILE REASSIGNED"
Remarks:	"Oil was leaking from a crack in the tank to the concrete floor. Cleanup in progress by handyman from realty company. Floor drain on site, unknown if oil entered drain."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

MINEOLA G16 (LIRR) (Continued) **S106122271**

Updated By:	GTBOBERS
Site Description:	Site Location: The Long Island Rail Road (LIRR) Mineola substation site is located in a urban portion of Nassau County, NY. It is located near Front Street and Main Street in Mineola. Site Features: The main site features are the two-story brick building, transformer yard, and parking area. Current Zoning and Land Use: The site is currently zoned for transportation and used by the LIRR as a rectifying station to supply power to the rail road. The immediate areas surrounding the site are used for a mix of commercial and industrial purposes. Past Use of the Site: The site was previously used by the LIRR to convert AC to DC power to power the rail road. The historic source of contamination is mercury from rectifiers that have since been replaced. A site assessment was conducted by the LIRR in August 1999, the assessment identified mercury contamination. The LIRR entered this site into the Voluntary Cleanup Program (VCP) in 2004. Site Geology and Hydrogeology: The soil at the site consists of primarily sand to a depth of several hundred feet. Bedrock is encountered at greater depths. The groundwater is approximately 40 feet below grade.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminant of concern was mercury.
Health Problem:	A fence limits access to the site so the public is unlikely to come in contact with surface contaminants, if present. The public is not likely to be drinking contaminated groundwater since public water serves the area and there are no known users of private well water nearby.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "FAILED TANK TESTS 6/19/13: HC t/c with John Imbriale @ NCDPW 516-903-1026. As per John, the diesel tank is connected to a generator. The vent pipe was cracked. When repaired, there was no evidence of contaminated soil. The tank passed a re-test. The #2 fuel oil tank is hooked up to the heating system. That tank had a cracked fitting on the vent pipe. When repaired, no evidence of contaminated soil was identified. The tank also passed a re-test. No further action."
Remarks: "2 failed tanks"

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"01/23/14 1140 Hrs: Left message for Lotito. DR 01/23/14 1320 Hrs (A): Lotito called- he said they suspect the petrometer is the cause of the test failure, 'and if this is the tank they believe it is, it was installed in 1971 and will probably be removed.' 01/23/14 1320 Hrs (B): DEC directed him to contact HC with any questions. DR 2/7/14 FILE REASSIGNED Approx. 60 cu. yards of #2 oil contaminated soil has been removed along with 1,000 UST removal. Excavation stopped at ~15' below the grade due to structural concerns of nearby building. ~100 ppp by PID meter soil sample on the bottom. Sub-surface investigation requested. 02-07-14 @8:00 Geo Probe rig mobilized on site. Two bores on the previous location of the tank made. PID meter field screening used. vertical spreading of petroleum undetected at ~27' below the grade in both bores. Ground water level has been reached at ~45' b.g. and appeared to be not affected. It has been assumed that minimal petroleum related contaminants left on the bottom of the excavation will be naturally attenuated before any impact to the ground water. Cleanup has been completed, no further action required.(VP)"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and

NASSAU COUNTY POLICE DEPT. HQ (Continued) **1000377723**

it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Site Description: Location: The Fumex Sanitation site is an inactive hazardous waste located on the corner of Bedford Avenue and Main Street (also known as Herricks Road) at 131 Herricks Road in the Village of Garden City Park in the Town of North Hempstead, Nassau County, New York. Site Features: The 0.24 acre site includes a one-story brick building and a paved parking area in the rear. The site is bordered on the north by Bedford Avenue, Herricks Road on the east, residential property to the west, and commercial property to the south. Access to the site is from the Bedford Avenue. Current Zoning/Use(s): The site is currently inactive, and is zoned for commercial use. The surrounding parcels are currently used for a combination of residential, commercial, light industrial, and utility right-of-ways. A residential area borders the site to the west along Bedford Avenue.Historic Use(s): Fumex Termite Service Corporation operated a commercial termite extermination business at this location from 1952 to 1992. Reportedly, the originally unpaved parking lot was sprayed regularly

FUMEX SANITATION (Continued) **1002986042**

with chlordane for insect control from 1952 to 1978. The parking lot was then paved sometime between 1978 and 1981. In 1981, a chlordane rinse water spill of less than 30 gallons occurred in the asphalt parking lot. Some of the rinse water entered a dry well located within the parking lot. Site investigations have confirmed that chlordane and other pesticides contaminated soil and the groundwater beneath the site and the soil of a neighboring yard.Site Geology and Hydrogeology: Beneath the Fumex Sanitation site are approximately 800 feet of unconsolidated deposits overlying crystalline bedrock. The shallowest soils beneath the site are the Upper Glacial formation. The Upper Glacial formation consists of Pleistocene age outwash sands and gravels and is approximately 100 feet thick in the vicinity of the Fumex Sanitation site. The depth to groundwater is approximately 40 to 50 feet below grade. Shallow groundwater flow is generally to the southwest. Immediately beneath the Upper Glacial formation is the Magothy formation. The Magothy is composed of sands with intermittent clay layers and is 300 to 400 feet thick in the vicinity of the site. The Magothy formation is used as the primary aquifer for public drinking water in Nassau County, with most wells screened 300-400 feet below the water table. Beneath the Magothy formation is the Raritan formation, consisting of the Raritan clay and the Lloyd sand. The Raritan formation is approximately 300 feet thick and overlies bedrock.

Env Problem:	Remediation at the site is complete. Environmental and Institutional controls in place.Prior to remediation, the primary contaminants of concern were heptachlor, chlordane, and dieldrin in the soil and groundwater. Groundwater samples, collected from on-site and off-site monitoring wells, continue to indicate that heptachlor, chlordane and dieldrin detected in the on-site monitoring wells is not migrating off-site.
Health Problem:	Some contaminated soils remain at the site below concrete or clean backfill, however, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

Site Features: The 0.24 acre site includes a one-story brick building and a paved parking area in the rear. The site is bordered on the north by Bedford Avenue, Herricks Road on the east, residential property to the west, and commercial property to the south. Access to the site is from the Bedford Avenue. Current Zoning/Use(s): The site is currently inactive, and is zoned for commercial use. The surrounding parcels are currently used for a combination of residential, commercial, light industrial, and utility right-of-ways. A residential area borders the site to the west along Bedford Avenue.Historic Use(s): Fumex Termite Service Corporation operated a commercial termite extermination business at this location from 1952 to 1992.

FUMEX SANITATION (Continued) **1002986042**

Reportedly, the originally unpaved parking lot was sprayed regularly with chlordane for insect control from 1952 to 1978. The parking lot was then paved sometime between 1978 and 1981. In 1981, a chlordane rinse water spill of less than 30 gallons occurred in the asphalt parking lot. Some of the rinse water entered a dry well located within the parking lot. Site investigations have confirmed that chlordane and other pesticides contaminated soil and the groundwater beneath the site and the soil of a neighboring yard.Site Geology and Hydrogeology: Beneath the Fumex Sanitation site are approximately 800 feet of unconsolidated deposits overlying crystalline bedrock. The shallowest soils beneath the site are the Upper Glacial formation. The Upper Glacial formation consists of Pleistocene age outwash sands and gravels and is approximately 100 feet thick in the vicinity of the Fumex Sanitation site. The depth to groundwater is approximately 40 to 50 feet below grade. Shallow groundwater flow is generally to the southwest. Immediately beneath the Upper Glacial formation is the Magothy formation. The Magothy is composed of sands with intermittent clay layers and is 300 to 400 feet thick in the vicinity of the site. The Magothy formation is used as the primary aquifer for public drinking water in Nassau County, with most wells screened 300-400 feet below the water table. Beneath the Magothy formation is the Raritan formation, consisting of the Raritan clay and the Lloyd sand. The Raritan formation is approximately 300 feet thick and overlies bedrock.

Env Problem: Remediation at the site is complete. Environmental and Institutional controls in place.Prior to remediation, the primary contaminants of concern were heptachlor, chlordane, and dieldrin in the soil and groundwater. Groundwater samples, collected from on-site and off-site monitoring wells, continue to indicate that heptachlor, chlordane and dieldrin detected in the on-site monitoring wells is not migrating off-site.

Health Problem: Some contaminated soils remain at the site below concrete or clean backfill, however, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

Dt rec updated: 03/12/2015
Updated By: SJVANDEU
Site Code: 55772
Site Description: Location: The Fumex Sanitation site is an inactive hazardous waste located on the corner of Bedford Avenue and Main Street (also known as Herricks Road) at 131 Herricks Road in the Village of Garden City Park in the Town of North Hempstead, Nassau County, New York. Site Features: The 0.24 acre site includes a one-story brick building and a paved parking area in the rear. The site is bordered on the north by Bedford Avenue, Herricks Road on the east, residential property to the west, and commercial property to the south. Access to the site is from the Bedford Avenue. Current Zoning/Use(s): The site is currently inactive, and is zoned for commercial use. The surrounding parcels are currently used for a combination of residential, commercial, light industrial, and utility right-of-ways. A residential area borders the site to the west along Bedford Avenue.Historic Use(s): Fumex Termite Service Corporation operated a commercial termite extermination business at this location from 1952 to 1992. Reportedly, the originally unpaved parking lot was sprayed regularly with chlordane for insect control from 1952 to 1978. The parking lot was then paved sometime between 1978 and 1981. In 1981, a chlordane rinse water spill of less than 30 gallons occurred in the asphalt parking lot. Some of the rinse water entered a dry well located within the parking lot. Site investigations have confirmed that chlordane and other pesticides contaminated soil and the groundwater beneath the site and the soil of a neighboring yard.Site Geology and Hydrogeology: Beneath the Fumex Sanitation site are approximately 800 feet of unconsolidated deposits overlying crystalline bedrock. The shallowest soils beneath the site are the Upper Glacial formation. The Upper Glacial formation consists of Pleistocene age outwash sands and gravels and is approximately 100 feet thick in the vicinity of the Fumex Sanitation site. The depth to groundwater is approximately 40 to 50 feet below grade. Shallow groundwater flow is generally to the southwest. Immediately beneath the Upper Glacial formation is the Magothy formation. The Magothy is composed of sands with intermittent clay layers and is 300 to 400 feet thick in the vicinity of the site. The Magothy formation is used as the primary aquifer for public drinking water in Nassau County, with most wells screened 300-400 feet below the water table. Beneath the Magothy formation is the Raritan formation, consisting of the Raritan clay and the Lloyd sand. The Raritan formation is approximately 300 feet thick and overlies bedrock.
Env Problem: Remediation at the site is complete. Environmental and Institutional controls in place.Prior to remediation, the primary contaminants of concern were heptachlor, chlordane, and dieldrin in the soil and groundwater. Groundwater samples, collected from on-site and off-site monitoring wells, continue to indicate that heptachlor, chlordane and dieldrin detected in the on-site monitoring wells is not migrating off-site.
Health Problem: Some contaminated soils remain at the site below concrete or clean backfill, however, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

Site Description: This property consists of a one-story, 11,200 square foot masonry building which houses an active heating, ventilation and air conditioning contractor (Conair) in the front (northern) portion and a snack food distributor (Bonaire) in the rear (southern) portion. The rear portion of the building was occupied by Town Sheet Metal Works, Inc. from 1975 until September 1985. Operations at the site reportedly involved fabrication of sheet metal, particularly duct work. A 1986 NCDH report identified regional groundwater contamination in the Garden City Park Industrial Area (GCPIA). The plume consisted of volatile organic compounds (VOCs), predominantly chlorinated solvents, including tetrachloroethene (PCE), trichloroethene (TCE), 1,2-dichloroethene (1,2-DCE) and 1,1,1-trichloroethane (TCA). A follow-up investigation by NCDH and the Nassau County Department of Public Works (NCDPW) in 1993 confirmed elevated VOCs, in particular PCE, in groundwater within the GCPIA. In 1994, an area-wide Preliminary Site Assessment (PSA) was performed in the GCPIA, to identify potential sources of the VOC contamination. The results of sampling conducted during that investigation led the NYSDEC to conduct PSAs in 1995 at four facilities that had been identified as potential sources. Samples collected from locations upgradient of the Town Sheet Metal facility contained PCE, TCE, and TCA concentrations ranging from below detection limits (BDL) to 8.2, 1.2 and 3.6 micrograms per liter (ug/l) respectively. No upgradient samples contained 1,2-DCE. Downgradient samples for PCE, TCE and 1,2-DCE ranged from BDL to 9.6, 1.8 and 2.4 ug/l, but TCA ranged from 4.7 to 59 ug/l. The similar upgradient and downgradient PCE, TCE and 1,2-DCE results implied that there was an upgradient source for these compounds. The distribution of TCA, however, suggested that there was a source in the vicinity of the Town Sheet Metal Site. In the 1999 focused PSA, which was conducted in response to the 1995 PSA, TCA was detected in two on-site sediment samples and was again found at higher levels in downgradient versus upgradient groundwater. The degree of threat posed by this contamination source was judged not to be significant.
Env Problem: Both sediment and groundwater data indicate that 1,1,1-trichloroethane was disposed at this facility in the past. However, the levels are relatively low and do not present a significant threat.
Health Problem: There is some evidence that volatile organic compounds (VOCs) were discharged into on-site drains. Only very low concentrations of contamination remain and they do not present a threat to public health. Groundwater at the site has been contaminated with VOCs at

TOWN SHEET METAL WORKS (Continued) **S105586277**

concentrations slightly above groundwater standards. A large VOC contaminant plume from the nearby 150 Fulton Avenue site and other sources is present downgradient from this site. Public water supply wells in the area of this larger regional contaminant plume are monitored for VOCs and treated if necessary.

Updated By: JBSWARTO
Site Description: Location: The Former Garden Photoengraving Site is located in a light industrial area at 40 Roselle Street, Mineola, NY in Nassau County.Site Features: The site consists of a 2-story commercial building and a parking lot to the east and west. The site is 0.394 acres. Roselle Street is south of the property and a county recharge basin to the north. The surrounding parcels are used for light industrial. Current Zoning/Use(s): The site is currently active and is zoned industrial. Currently, the building is occupied by a dental implants fabrication business (Flexite Corporation Rapid Injection Systems), a cabinet maker, and Somar Insulation. The closest residences are located in an apartment complex 200 feet to the east.Historical Use(s): The building was built in 1953 and has been used as office space, pesticide storage, and as a photoengraving facility. Fumex Pest Control reportedly stored pesticides and herbicides in cargo containers within the building and in sheds in the parking lot from 1992 until 1997. The photoengraving facility, Garden Photoengraving Co., Inc. operated here from 1955 until at least 1977 and would have made extensive use of chemicals. An investigation performed in April 2002, under the oversight of Nassau County Department of Health (NCDH), detected elevated levels of pesticides in the on-site soil and chlorinated solvents in the on-site groundwater. During the 2002 investigation and clean-out of the cesspools under Nassau County Department of Health (NCDH) oversight, no herbicides were detected anywhere, no pesticides were detected in the cesspools, and only low levels of dichlorodiphenyl trichloroethane (DDT) and chlordane were found in soil in the floor drain but at levels less than the soil cleanup objectives. As a result, pesticides are not considered to be one of the contaminants of concern at the site. Public supply wells N0097 and N08576 are located approximately 2,500 feet downgradient of the site.NYSDEC has completed a Preliminary Site Assessment on this site and the adjacent 50 Roselle Street property. The site is currently undergoing a Remedial Investigation.Site Geology and Hydrogeology: Depth to groundwater is 50 ft bgs. Groundwater flow direction is to the south-southwest. Soil is composed mostly of sand and some gravel.
Env Problem: Nature and Extent of Contamination: Contaminated bottom sediments were removed from on site cesspools number 1 through 5 and from drywell 1 and floor drain 1 in 2002 under Nassau County Department of Health (NCDH) oversight. Follow-up investigation directly below cesspool 4 in 2003 detected trichloroethene (TCE) at 474 ppm in the soil (20 feet above the water table) and 630 ppb in the groundwater. Soil below this cesspool was found to be impacted by petroleum

FORMER GARDEN PHOTOENGRAVING CO., INC. (Continued) **S110137791**

hydrocarbons, primarily naphthalene, from 12 to 48 feet below ground surface and groundwater contained 1,085 ppb naphthalene. The 2008-2009 Preliminary Site Assessment detected significant levels of volatile organic compounds in groundwater at the site. Maximum concentrations found were 1000 ppb TCE , 230 ppb tetrachloroethene (PCE), 890 ppb cis-1,2-dichloroethene, and 3200 ppb naphthalene. These contaminants all have groundwater standards of 5 ppb except for naphthalene which has a guidance value of 10 ppb. Significant Threat: This site poses a significant threat to the environment due to the ongoing release of contaminants into the groundwater from the source area cesspools.

Health Problem:	The site is covered by buildings and pavement so contact with contaminated soil is not expected unless excavation occurs. Because public water serves the area and there are no known users of well water in the vicinity, no one is likely to drink contaminated groundwater.

DEC Memo: "07/22/14 1600 Hrs: Checked the database for any prior reports for this address but found none. DR REFERRED TO LAW ENFORCEMENT"
Remarks: "Secretary from the business in the front of the building (Irene Porcelli) witnessed subject from the furniture refinishing business in the back of the building pouring paints or thinners that had been used for the furniture, into the ground outside of the building. Caller states that DEC has taken action against the Ali Moslem subject involving other violations, but the caller cannot recall who it was. Caller stated that as in the past his business had to be evacuated due to fumes vent through the air conditioning system from the painting/varnishing/refinishing activity (which has been reported to the town code enforcement) but the caller wants to report the intensional spill to do what he can to get the Ali Moslem shut down and moved out of the building."

Site Description: The site consists of a commercial building and a paved parking lot located at 50 Roselle Street. The one-story 10,680 sq ft building was constructed on a parcel of 0.4224 acres in 1955 with an addition in 1982. The property was occupied by a metal door and window manufacturer from 1961 to 1972, Richy-Bob Knitting Mill from at least

FORMER RICHY-BOB KNITTING (Continued) **S113916743**

1982 to 1997, and Lewis Oil (under ownership of Windsor Fuel Oil) since 2000. Lewis Oil is currently using the facility as a vehicle and equipment repair shop. A 550-gallon fuel oil UST was removed from the property in 2008. No contaminant concentrations exceeding NYSDEC RSCOs were identified. NYSDEC has completed a Preliminary Site Assessment (PSA) on this site and the adjacent 40 Roselle Street property, due to the proximity of the contamination to both properties. Although the PSA found no contaminants of concern (COCs) in the groundwater on the site, COCs were found directly downgradient of the site (approximately 30 ft south). COCs were identified in significant levels in the soil vapor underneath the sub-slab of the building. Public supply wells N0097 and N08576 are located approximately 2,500 feet downgradient of the site. A Remedial Investigation is currently unnderway at the 40 Roselle Street property under NYSDEC Site No. 130174. A supplemental Site Characterization was completed in April 2012. It found that no source of contamination was found on the 50 Roselle Street property. Based on an assessment for significant threat determination, it is found that the site does not qualify for the Registry and has been reclassified to N.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PRECISION FABRICATORS INC (Continued) **1000171928**

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Updated By:	DJEVANS

Site Description: Site Location: The site is located in an urban/suburban portion of Nassau County in Mineola. The site is located at 255 East Second Street on approximately 4.5 acres. Site Features: The main site features include several interconnected one-story buildings and asphalt parking areas. The site is adjacent to the Long Island Railroad and a residential neighborhood to the south. To the north, east, and west are other commercial and industrial properties. Current Zoning/ Use(s): The site is currently used as machine shop. It has been in use as a machine shop since 1947.Historical Use(s): Prior operations that primarily led to the contamination include improper storage of drums of waste metal shavings. A remedial investigation was completed in 1996. Supplemental RI work was completed in 2003. An IRM to remove contaminated soil was also completed in 2003. A feasibility study was completed in June 2005. The Record of Decision was issued in March 2006. The soil removal along and under the LIRR was completed during the track shutdown during the weekend of August 24-26, 2007. A soil vapor extraction system has been operating since January 2008. Site Geology and Hydrogeology: The site is situated on unconsolidated coastal plain deposits of the Cretaceous to Quaternary age. Glacial outwash soil deposits known as the Upper Glacial Aquifer of Long Island underlie the area in which the site is located ot a thickness of apporimately 50 feet below ground surface.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs) including tetrachloroethene (PCE, or perc), 1,1,1-trichloroethane (TCA), trichloroethene (TCE) and polychlorinated bi-phenyls (PCBs). Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Health Problem: Off-site contamination of PCB's, VOC's and heavy metals, are restricted to the Long Island Railroad (LIRR) behind the property; accessiblity to this area appears to be limited. Therefore, public exposures to off-site contamination in this area is not likely. A soil vapor extraction system has been proposed to remediate existing on site soil gas contamination. NYSDOH and NYSDEC will evaluate the need to conduct additional investigations to determine the potential for soil vapor intrusion into structures on or near the site.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

EPA Region: 02
Land type: Facility is not located on Indian land. Additional information is not known.
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:
Owner/operator name: J C G ENTERPRISES
Owner/operator address: 80 CEDAR DR
GREAT NECK, NY 11021
Owner/operator country: US
Owner/operator telephone: (516) 466-9620
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Owner/operator name: SPRAGUE-GOODMAN ELECTRONICS,INC.
Owner/operator address: 134 FULTON AVE.
OPERCITY, NY 99999
Owner/operator country: US
Owner/operator telephone: (516) 746-1385
Legal status: Private

SPRAGUE GOODMAN ELECTRONICS (Continued) **1000146304**

Owner/Operator Type: Operator
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/01/2006
Site name: SPRAGUE GOODMAN ELECTRONICS
Classification: Not a generator, verified

Date form received by agency: 03/28/1995
Site name: SPRAGUE GOODMAN ELECTRONICS
Classification: Conditionally Exempt Small Quantity Generator

. Waste code: NONE
. Waste name: None

Date form received by agency: 11/19/1980
Site name: SPRAGUE GOODMAN ELECTRONICS
Classification: Not a generator, verified

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Date form received by agency: 06/26/1980
Site name: SPRAGUE GOODMAN ELECTRONICS
Classification: Large Quantity Generator

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING

SPRAGUE GOODMAN ELECTRONICS (Continued) **1000146304**

CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 11/21/1986
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State

FINDS:

Registry ID: 110004363787

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Date of Government Version: 11/14/2016

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

Financial Assurance 2: Financial Assurance Information Listing
A listing of financial assurance information for hazardous waste facilities. Financial assurance is intended to ensure that resources are available to pay for the cost of closure, post-closure care, and corrective measures if the owner or operator of a regulated facility is unable or unwilling to pay.

Date of Government Version: 12/01/2015

Last EDR Contact: 02/13/2017
Next Scheduled EDR Contact: 05/29/2017
Data Release Frequency: Varies

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System
New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

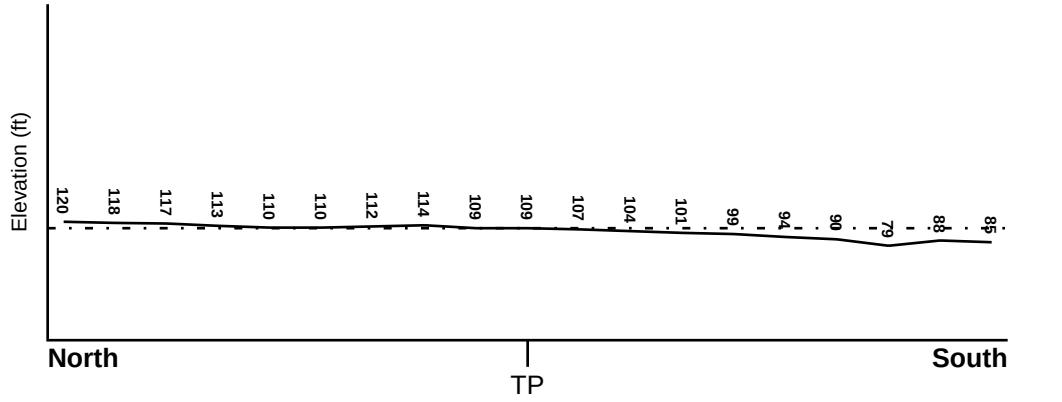
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

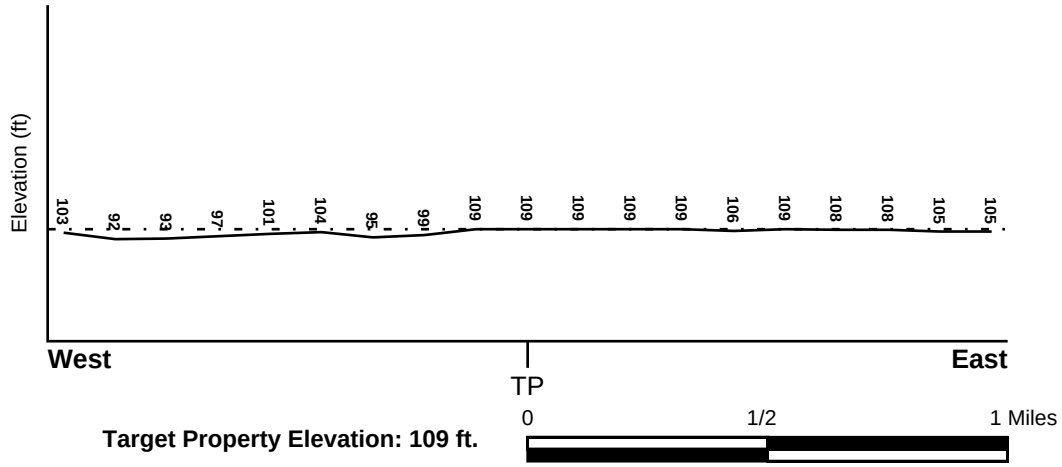
GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION



Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

0 1/2 1 Miles

Target Property Elevation: 109 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
36059C0207F	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
36059C0118F	FEMA Q3 Flood data
36059C0119F	FEMA Q3 Flood data

36059C0226F	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LYNBROOK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile NNE
Site Name:	Fumex Sanitation, Inc.
Site EPA ID Number:	NYD044476836
Surficial Aquifer Flow Dir.:	Southwest
Inferred Depth to Water:	approximately 47 feet.
Hydraulic Connection:	The surficial aquifer and underlying aquifer are hydraulically connected.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Notes/Comments:

Good Morning! We received your fax in regards to an environmental due diligence on a property in Mineola. We do not go by Section block Lot, we go by address. Attached you will find a FOIL to fill out and fax back with address of property. Please fill out and fax back. At that point Property file will be pulled and you will get a call for someone to come in and review. Takes 3-5 business days. Thank you

ATTENTION: This message is intended only for the individual to whom it is addressed. It contains information that may be confidential under law. If you are not the intended recipient or agent responsible for delivering this message, do not read, copy or distribute this information. If you receive this message in error, please notify us immediately at (516) 746-0750. Thank you.

Office of the Village Clerk
Public Records Officer

APPLICATION TO VIEW PUBLIC RECORDS

Pursuant to New York State "Freedom of Information Law," (Laws of 1974, Chapters 578, 579, 580) adopted by resolution of the Board of Trustees of the Incorporated Village of Mineola on October 21, 1974.

The undersigned, which appears here in person, wishes to examine the following Official Records. Describe below the records you wish to examine, giving identifying details:

_____

_____

PLEASE NOTE:

Section #175.25 Penal Law: "Tampering with public records in the first degree."

> *A person is guilty of tampering with public records in the first degree, when knowing that he does not have the authority of anyone entitled to grant it, and with intent to defraud, he knowingly removes, mutilates, destroys, conceals, makes a false entry in or falsely alters any record or other written instrument filed with, deposited in, or otherwise consulting a record of public office or public servant.*

Tampering with public records in the first degree is a class D felony, L.1965, c.1030, effective September 1, 1967.

Section #175.20 Penal Law: "Tampering with public records in the second degree."

> *A person guilty of tampering with public records in the second degree, when knowing that he does not have the authority of anyone entitled to grant it, he knowingly removes, mutilates, destroys, conceals, makes a false entry in or falsely alters any record or other written instrument filed with, deposited in, or otherwise constituting a record of public officer or public servant.*

Tampering with public records in the second degree is a Class A misdemeanor, L.1965, c.1030, effective September 1, 1967.

A fee of $ .25 *per page* for copies will be charged to the applicant and is payable by cash or check issued to the Inc. Village of Mineola.

Subject: Mineola Village Property foil request

In regards to your recent Foil request for information on the above address location:
The only information this office has that you have requested is current and historic ownership information for this property.
As ownership information is Public Record, requesting it through Foil is not necessary. I am going to deny your request in regards to Foil and you may
Request deed info (ownership records) by coming into this Office or calling 516-571-3245.
The other information should be directed to the Town of North Hempstead.
Sincerely,
Nassau County Clerk Foil Officer

March 17, 2017

Dear Tiffany Alves,

EPA-R2-2017-004710 has been processed with the following final disposition:

This is in response to your Freedom of Information Act (FOIA) request, identified above, dated 03/08/2017, that you submitted to the U.S. Environmental Protection Agency (EPA). Your request seeks the following:

Matrix is performing environmental due diligence for the property located in the Village of Mineola, Nassau County, Long Island, New York (Section 9, Block 414, Lots 18, 318, 319 and 320

The information that you are seeking is publicly available on EPA's *MyPropertyInfo* online database. The database will provide you with information concerning records the EPA has about a specific property, and it can be accessed at the link below:

http://www.epa.gov/myproperty/

Because this information is publicly available, your FOIA request for this information is being administratively closed, in accordance with EPA's FOIA regulations. See 40 C.F.R. Part 2, Subpart A. Please note you should perform the initial search of a property of interest by visiting the above link. If your search produces results, then proceed with an information request for additional records under FOIA. Your FOIA submittal should be accompanied by these results. Be advised, soon we will discontinue the processing of requests seeking data that is available in the public domain. Instead, you should follow the above steps.

If you consider this response to be a denial of your request, you may appeal this determination to the National Freedom of Information Office, U.S. EPA, 1200 Pennsylvania Avenue, N.W. (2822T), Washington, DC 20460 (U.S. Postal Service Only). Only items mailed through the United States Postal Service may be delivered to 1200 Pennsylvania Avenue, N.W. If you are submitting your appeal via hand delivery, courier service, or overnight delivery, you must address your correspondence to 1301 Constitution Avenue, N.W., Room 6416J, Washington, DC 20001. Your appeal must be made in writing, and it must be received no later than 90 calendar days from the date of this letter. The Agency will not consider appeals received after the 90 calendar day limit. Appeals received after 5:00 pm EST will be considered received the next business day. The appeal letter should include the FOIA tracking number listed above. For quickest possible handling, the subject line of your email, the appeal letter, and its envelope, if applicable, should be marked "Freedom of Information Act Appeal." Additionally, you may seek assistance from EPA's FOIA Public Liaison at hq.foia@epa.gov or (202)566-1667, or from the Office of Government Information Services (OGIS). You may contact OGIS in any of the following ways: by mail, Office of Government Information Services, National Archives and Records Administration, Room 2510, 8610 Adelphi Road, College Park, MD 20740-6001; e-mail, ogis@nara.gov; telephone, 301-837-1996 or 1-877-684-6448; and facsimile, 301-837-0348.

This letter concludes our response to your request. Thank you for your interest in this information.

Respectfully,

/s/

Mary Mears
Public Affairs Director
U.S. EPA Region 2 (NJ, NY, PR, the US VI and eight Indian Nations)

RE: PUBLIC RECORDS REQUEST of 3/15/2017, Reference # W019383-031517

Date: 03/15/2017

Dear Tiffany Alves,

I write regarding your Freedom of Information Law (FOIL) request seeking:
Matrix is performing environmental due diligence for the property located in the Village of Mineola, Nassau County, Long Island, New York (Section 9, Block 414, Lots 18, 318, 319 and 320 [see attached tax map]). Matrix requests all information/files including but not limited to; underground storage tanks, aboveground storage tanks, permits, violations, discharges/releases, spills, NYSEDC correspondence, hazardous materials, inspections, investigations, historic property ownership, existing and former tenants, fires, potable wells, monitoring wells, septic systems, and any additional records not listed herein..

In order for the Department to accurately search for the records you seek, we need you to give us more specific information describing the records.

1. Please visit https://mycusthelp.com/NEWYORKDEC/_rs/RequestLogin.aspx within two weeks of the date of this message to log into your DEC FOIL Request account, where you can send a Message to the Department clarifying your request. Your email address is your username for logging in.
2. In your Message, please provide as much of the following information as you can:

    - The name of the facility
    - An accurate street address for the property or facility
    - A permit number, if applicable
    - The nature of your request (exactly what information are you looking to obtain)
    - The name of the property owner
    - The Spill Number when seeking records of chemical or petroleum spill incidents

You may find Spill number information on the Department's website, in the online Spill Incidents Database at http://www.dec.ny.gov/cfmx/extapps/derexternal/index.cfm?pageid=2.

If your search of the Spill Incidents Database reveals that a spill number does not exist for a site or location about which you seek spill information, please state that no spill number exists in your reply to this Message.

Again, We encourage you to send your reply from your online customer DEC FOIL account in the Department's by email, which will facilitate faster processing of your request.

Please reference FOIL request W019383-031517 in all your communications with Department regarding this request.

If we do not receive your reply within two weeks of the date of this message, your request will be closed.

If you have any questions in the interim, please call me at 631 444-0202 and refer to FOIL request W019383-031517.

Sincerely,
Region 1 FOIL Coordinator

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Matrix New World Eng.,Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E 2600).

STANDARD ENVIRONMENTAL RECORDS	Maximum Search Distance*	Summary: property	1/10	1/10 - 1/3
Federal NPL	0.333	0	0	0

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported
Hydric Status:	Hydric Status: Soil does not meet the requirements for a hydric soil.
Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

Soil Layer Information

	Boundary			Classification			
Layer	**Upper**	**Lower**	**Soil Texture Class**	**AASHTO Group**	**Unified Soil**	**Permeability Rate (in/hr)**	**Soil Reaction (pH)**
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:	silt loam loamy sand sandy loam fine sandy loam
Surficial Soil Types:	silt loam loamy sand sandy loam fine sandy loam
Shallow Soil Types:	sandy loam
Deeper Soil Types:	unweathered bedrock very gravelly - loamy sand stratified sandy loam

RMP: Risk Management Plans
Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

E DESIGNATION: E DESIGNATION SITE LISTING
Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

ENV RES DECL: Environmental Restrictive Declarations

RECORD SOURCES AND CURRENCY

Standard Environmental Record Source: State and tribal institutional control / engineering control registries

The Environmental Restrictive Declarations (ERD) listed were recorded in connection with a zoning action against the noted Tax Blocks and Tax Lots, or portion thereof, and are available in the property records on file at the Office of the City Register for Bronx, Kings, New York and Queens counties or at the Richmond County Clerk's office. They contain environmental requirements with respect to hazardous materials, air quality and/or noise in accordance with Section 11-15 of this Resolution.

ERP: Environmental Restoration Program Listing

Standard Environmental Record Source: State and tribal Brownfields sites

Search Distance: 0.333 Mile

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

HIST SPILLS: SPILLS Database

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

2020 COR ACTION: 2020 Corrective Action Program List

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.25 Mile

RECORD SOURCES AND CURRENCY

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

SEMS: Superfund Enterprise Management System

Standard Environmental Record Source: Federal CERCLIS

Search Distance: 0.333 Mile

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.333 Mile

RECORD SOURCES AND CURRENCY

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

Standard Environmental Record Source: Historical Gas Stations

Search Distance: 0.125 Mile

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR MGP: EDR Proprietary Manufactured Gas Plants

Standard Environmental Record Source: Former manufactured Gas Plants

Search Distance: 0.333 Mile

RECORD SOURCES AND CURRENCY

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5' minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW® Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW® Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services. The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX I

PROSPECTIVE LANDOWNER AND/OR USER QUESTIONNAIRE

MATRIXNEWORLD
Engineering Progress

Matrix New World Engineering
Prospective Landowner And/Or User Questionnaire

Subject Property Name:	Mineola Parking Lot on Third Avenue
Subject Property Address:	Third Avenue, Mineola

QUESTION	YES	NO	UNK?
1. Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property?		X	
2. Are you are aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the subject property?		X	
3. Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?		X	
4. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?			X
5. Are you aware of any activity use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?			X
6. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants?		X	
7. Are you aware of commonly known or reasonably ascertainable information about the property? For example: Do you know the past uses of the property?		X	
8. Do you know specific chemicals that are present or once were present at the property?		X	
9. Do you know of spills or other chemical releases that have taken place at the property?		X	
10. Do you know of environmental cleanups that have taken place at the property?		X	
11. Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?			X
12. Has a title search been performed? If yes, please attach.			X
13. Is the property or has the property been used as a gasoline station, motor repair facility, commercial printing, dry cleaners, photo developing, landfill, industrial use, waste treatment or disposal facility?			X
14. Are there currently any damaged or discarded automotive or industrial batteries, pesticides, paints, or other chemicals at the subject property?			X
15. Are there currently any industrial drums or chemicals at the subject property?			X
16. Are you aware of contaminated fill at the subject property? (i.e. Fill dirt from off-site.)			X
17. Are there currently any pits, ponds, or lagoons in connection with waste disposal or treatment at the subject property?			X
18. Are there any current or previous underground storage tanks or aboveground storage tanks at the subject property?			X
19. Are there currently any vent pipes, fill pipes, or access ways protruding from the ground at the subject property?			X
20. Is the subject property served by a private well and or a private septic system?			X
21. Does the property discharge industrial wastewater (excluding sanitary sewer)?			X
22. Are there any monitoring wells at the subject property?

Prospective Landowner And/Or User Questionnaire

Subject Property Name:	Mineola Parking Lot on Third Avenue			
Subject Property Address:	Third Avenue, Mineola			
QUESTION		**YES**	**NO**	**UNK?**
23. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If there is a difference, it is because of known contamination?				**X**
24. What type of property transaction is being performed? i.e. sales, purchase, exchange, refinance?		**Unknown**		
25. What is the fair market value of the property?		**Unknown**		
26. What is the purchase price of the property?		**Unknown**		
Please attach additional explanation for questions answered "YES".				
Please provide the following documentation to Matrix, if available: - Previous Phase I Environmental Site Assessment - Environmental Compliance Audit Reports - Registrations for USTs and/or ASTs - Geotechnical reports - Asbestos or Lead-Based Paint reports - Environmental permits - Registrations for underground injection systems - Hazardous waste generator notices				
Please return questionnaire to Matrix: Fax 973-240-1818, or mail to 26 Columbia Turnpike, Florham Park, NJ 07932

FEMA FLOOD INSURANCE RATE MAP

National Flood Hazard Layer FIRMette

Legend

- Cross-Sections
- Base Flood Elevations

N

Flood Hazard Zones

- 1% Annual Chance Flood
- Regulatory Floodway
- Special Floodway
- Area of Undetermined Flood Hazard
- 0.2% Annual Chance Flood
- Future Conditions 1% Annual Chance Flood Hazard
- Area with Reduced Risk Due to Levee

LOMRs

- Effective

Map Panels

- Digital Data
- Unmodernized Maps
- Unmapped

This map complies with FEMA's standards for the use of digital flood maps. The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. The base map shown complies with FEMA's base map accuracy standards.

The NFHL is a living database, updated daily, and this map represents a snapshot of information at a specific time.

Flood risks are dynamic and can change frequently due to a variety of factors, including weather patterns, erosion, and new development. FEMA flood maps are continually updated through a variety of processes. Users should always verify through the Map Service Center (http://msc.fema.gov) or the Community Map Repository that they have the current effective information.

NFHL maps should not be created for unmapped or unmodernized areas.
