Site Description:	Location: The 123 Post Avenue site is located in the Village of Westbury, Nassau County.Site Features: The site consists of a 50’ by 189’ lot. On the site is a building currently used for dry cleaning

123 POST AVENUE (Continued) **S106780907**

and a parking area surrounding the building. The surrounding areas are used for commercial and residential purposes. An elevated LIRR line is adjacent to the south border of the site. Current Zoning and Land Use: This site is currently zoned for commercial use and an active dry cleaner operates on site.Past Use of the Site: Dry Cleaning has been conducted at the site since the 1950s. The site was placed on the NYS Registry of Inactive Hazardous Waste Disposal Sites in December of 1998 after the Nassau County Department of Health performed a facility inspection in July 1995. Operable Units: The site is currently being managed as two operable units, one for on-site (OU-1) and one for the off-site groundwater (OU-2). An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination.Site Geology and Hydrogeology: The depth to water is approximately 35 feet and flows to the south-south west. The soils at the site consist of sands and clays to a depth of several hundred feet before bedrock is encountered.

Env Problem: Nature and Extent of Contamination: For OU 1: On-Site AreasBased on the investigations conducted to date the primary contaminant of concern is tetrachloroethene and its breakdown products, trichloroethene and dichloroethene. These contaminants continue to be present in the on-site soils at a concentration up to 190,000 micrograms per kilogram (unrestricted soil cleanup objectives are 1300 micrograms per kilogram) and in the on-site groundwater.Soil Vapor and Indoor Air - tetrachloroethene was detected in soil vapor at elevated concentrations and was also detected in indoor air. For OU 2: Off-Site GroundwaterBased on the investigations conducted to date the primary contaminant of concern is tetrachloroethene and its breakdown products, trichloroethene and dichloroethene.These contaminants were initially detected in the off-site groundwater plume at concentrations up to 5000 micrograms per liter. Between October 2011 and March 2013 oxidant was injected into the plume as part of a pilot study. The injections reduced tetrachloroethene concentrations to less than 800 micrograms per liter. Regardless, these contaminants exceed groundwater standards (5 micrograms per liter) beneath the site and for at least 1800 feet downgradient from the site. Significant Threat: The site is listed on the registry of inactive hazardous waste disposal sites as a class 2 site, representing a significant threat to human health and the environment, it is located within a USEPA designated sole source aquifer, and is in the vicinity of municipal water supply wells.

Health Problem: Soil vapor from the site caused indoor air contamination at several neighboring homes and businesses. The soil vapor extraction system operating at the site has effectively reduced concentrations of tetrachloroethene in these buildings. NYSDOH and NYSDEC will evaluate the need to conduct additional investigations to determine the potential for soil vapor intrusion into structures near the off-site groundwater plume. Direct exposures to the contaminated groundwater are not expected, because the site and surrounding area are served by a public water supply. There are three active public water supply wells nearby. Two are treated to remove volatile organic compound contamination (not from this site), and the third does not require treatment to comply with standards.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major

VILLAGE AUTO BODY WORKS INC (Continued) **1000276051**

redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was PARISH 11/04/93: Long Island Rail Road found oil on track right-of-way. Request meeting. 11/12/93: LIRR reported incident to DEC. 11/19/93 (A): DEC (Parish) met on site with LIRR. Fence between LIRR's property and AGIP's had been taken down. Appeared oil is dumped onto LIRR's property. Area approx 100ft long by unk width behind AGIP heavily stained. Has sketch and photos. 11/19/93 (B): Noted drum bungs in debris. Also noted a number of drums, and open trailers containing drums, on AGIP's property. 11/19/93 (C): LIRR had taken two soil samples. 11/19/93 (D): DEC took two soil samples. Pedneault to analyze. 12/03/93: Pedneault data- Found approx 94500ppb of Total Petroleum Hydrocarbons and trace of unidentifiable petroleum product . Did not find BTEX. 12/16/93 (A): LIRR FAXes their data- In sample Mile Post 22-1 , found approx 9300ppb Acetone, approx 3000ppb Vinyl Acetate, approx 1800ppb Toluene, approx 1700ppb Xylenes, approx 7400ppb 2Ethylhexylphthalate, 1.2ppm Barium, and approx 71000ppb Total Petroleum Hydrocarbons. 12/16/93 (B): In sample Mile Post 22-2 , found approx 96000ppb Acetone and approx 130,000ppb Total Petroleum Hydrocarbons. 12/16/93 (C): NOTE- Some of the detection limits for other parameters were quite high. 12/17/93 (A): DEC (Parish & Acampora) met with LIRR and Ron Pappas (AGIP's Operations Manager) on site- He claimed they were burglarized approx 2 weeks prior. Said oil and antifreeze was stolen and spilled at the area in question. Said this was an ongoing problem since Ultralene owned the shop (PRIOR OCCUPANT?). 12/17/93 (B): Did not have any receipts for disposal of waste products. Drum residue taken from the drums prior to their removal . Found heavy contamination in area where they are cleaned. 12/17/93 (C): Drums supposedly taken by Goodman Brothers Steel Drum Co, 18 Division Place, Brooklyn NY. 12/17/93 (D): Requested cleanup of impacted areas. 12/20/93 (A): Savage Strauss Group (1 Harvard Way, Somerville NJ, 08876, 908-722-9000, consultant for AGIP)- AGIP contracted for development of a Spill Prevention Control and Countermeasure Plan. They have inspected site. Will be sending draft plan to AGIP shortly. 12/20/93 (B): Upon completion of SPCC Plan, will investigate area of possible spillage. Will determine whether petroleum hydrocarbons are present and their type. IF IT IS DETERMINED TO BE LIGHT HYDROCARBONS THAT ARE NOT COMPOUNDS FOUND IN MOTOR OIL, HYDRAULIC OIL, OR ANTIFREEZE, WE WILL THEN ADVISE YOUR OFFICE OF SUCH AND YOU CAN THEN APPROACH THE RAILROAD TO REMEDIATE THIS AREA OF CONTAMINATION. THIS WOULD BE EXPECTED TO BE DONE TO PREVENT IT FROM MIGRATING ONTO THE AMERICAN AGIP'S PROPERTY, IF IT HASN'T ALREADY . Their geologist has determined groundwater flow to be from LIRR property TOWARD theirs. 12/20/93 (C): If the hydrocarbons ARE typical of the above products, AGIP will implement a more detailed sampling plan to determine their extent. Would then develop remediation plan. 01/18/94: Letter to AGIP, cc LIRR and NCFM- Request copy of waste disposal receipts; determination of vertical

AGIP INC (Continued) **S102139211**

and horizontal extent of contamination; removal of all contaminated soil; and disposal receipts for same. Gives scenario for failure to comply. 02/16/94: Strauss FAX- Due to bad weather, sampling is postponed until 18Feb. 08/31/94: Strauss called- Sampling for Total Petroleum Hydrocarbons showed count in 1000's of ppM . In addition, they confirm motor oil contamination . Are resampling today. DEC requested volatiles and semi-volatiles. 06/28/95: Yellowstone Environmental Services (131 Fulton Ave, Hempstead NY, 11550, 516-485-0000) letter- Have been contracted to perform surface and subsurface remediation. In process of acquiring necessary permits from LIRR. 08/22/95: Parish on site- Yellowstone cleaning up. Removed approx 40-50cy soil from along embankment. Four composite samples taken. Disposal receipts and lab data to be sent ASAP. Has sketch and photos. 09/11/95: Receive lab data- FIVE samples. Total Petroleum Hydrocarbons range from 186ppM to 6500ppM. 09/26/95: Letter to AGIP- Have reviewed soil data. Some contamination still present. Need additional excavation in area of samples 1 and 4. Resample after excavation. 10/11/95: Parish on site- Yellowstone excavating areas in question. Removed approx 5cy soil. Took sample from each area. Plastic put over area and then filled with soil (will make it easier to excavate if more work needed). 10/18/95: Yellowstone letter- Enclose lab data. Sample 1A had 210ppM Total Petroleum Hydrocarbons, and sample 2 had 113ppM. 10/31/95: 95 Inc (68-H East Jefryn Blvd, Deer Park NY, 11729) Project Closure Report- Includes copies of various documents, such as soil disposal receipts and copies of the Aug and Oct lab data. 11/28/95: Spills memo to BECI- Enclose copy of disposal receipts. ALLIED ENVIRONMENTAL GROUP CLASSIFIED THE WASTE AS HEATING OIL. IT WAS REALLY LUBRICATING OIL. YOU MAY WISH TO CHECK THIS COMPANY'S CLASSIFICATION OF WASTES FOR DISPOSAL. THEY APPEAR TO BE A BROKER OF CONTAMINATED SOILS . 11/29/95: Letter to AGIP- Have reviewed the file and have received the disposal papers. No further requirements for this spill at this time. 05/12/97: DEC to review for closure (HAD BEEN KEPT OPEN DUE TO THE ONGOING NATURE OF THE PROBLEM HERE). ***OTHER SPILLS HERE- 8800743- DUMPING OF WASTE OIL INTO STORM DRAIN (NO PROOF AGIP WAS SPILLER) 8807176- DUMPING OF WASTE OIL INTO STORM DRAIN (NO PROOF AGIP WAS SPILLER) 8911394- 1K DIESEL TANK TEST FAILURE; TANK ALONE PASSED AFTER LINES WERE DISCONNECTED; TANK TO BE ABANDONED 9509570- DUMPING AT REAR OF PROPERTY ONTO LIRR PROPERTY? ***FOUND AT LEAST ONE OTHER SPILL BY AGIP- 9205015- UNSECURED CONTAINERS IN TRUCK FELL OVER AND LEAKED ONTO ROAD. Description: The former Mitchel Field consisted of about 1,437 acres in Hempstead, New York. Mitchel Field has a history of troop encampments since the Revolutionary War. In 1918, it became an active flying field. During World War II, it was used for training and for sending tactical units overseas. Abandoned tanks are present at the site, and hazardous and toxic wastes and ordnance could be present. The site is currently occupied by Hofstra University, Nassau Community College, the Nassau Coliseum, and the Mitchel Sports Complex. This property is known or suspected to contain military munitions and explosives of concern (e.g., unexploded ordnance) and therefore may present an explosive

MITCHEL FIELD (Continued) **1007211602**

hazard.
Current Program: Not reported
History: Acquisition of the site occurred from 1917 until 1959. The installation consisted of 1,168.0 acres in fee, 181.67 acres in easement, and 7.08 acres and 79.07 acres that were licensed and leased, respectively. Mitchel Field was deactivated in April 1961; 1,076.77 acres fee were reported excess to the General Services Administration, and the remaining 92.13 acres fee were transferred to other DoD agencies. The principal owners of the site are now Hofstra University and Nassau Community College. This property is known or suspected to contain military munitions and explosives of concern (e.g., unexploded ordnance) and therefore may present an explosive hazard.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

South Map:	5940607 FREEPORT, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

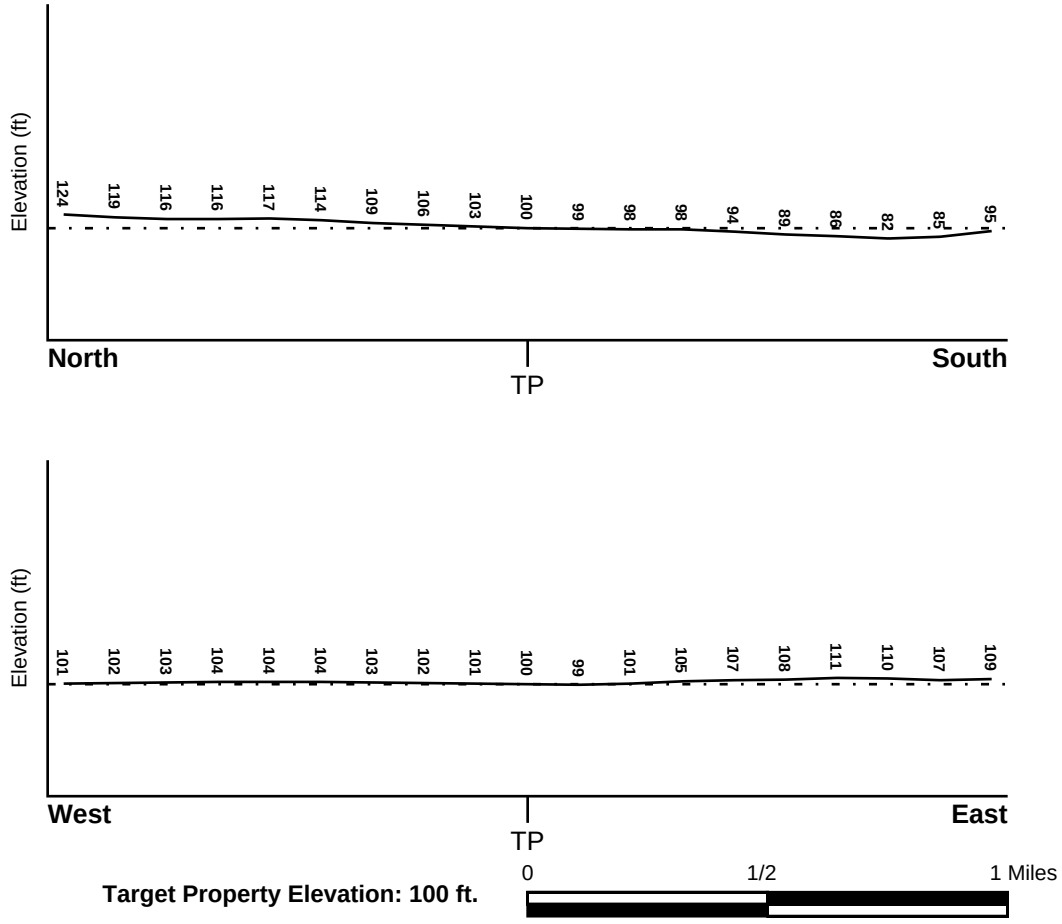
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
36059C0139F	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
36059C0138F	FEMA Q3 Flood data
36059C0227F	FEMA Q3 Flood data

36059C0227G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HICKSVILLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam
sandy loam
sand

Surficial Soil Types: loam
sandy loam
sand

Shallow Soil Types: sandy loam

Deeper Soil Types: very gravelly - sand
coarse sand

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Sent: Monday, March 20, 2017 11:04 AM
To: Jordan Farber
Subject: FOIA Request EPA-R2-2017-005081 Submitted

This message is to confirm your request submission to the FOIAonline application: View Request. Request information is as follows:

- Tracking Number: EPA-R2-2017-005081
- Requester Name: Jordan Farber
- Date Submitted: 03/20/2017
- Request Status: Submitted
- Description: Matrix is requesting any information/files for Scally Place (Block 228, Lots 12, 792, and 793) in the Village of Westbury, Nassau County, New York including but not limited to: underground storage tanks, above ground storage tanks, tanks and building permits, health and environmental violations, discharges/releases of petroleum and hazardous materials, spills, hazardous materials, health and environmental inspections and/or investigations, historic property ownership, existing and former tenants, fires, potable wells, monitoring wells, and septic systems.

March 21, 2017

Dear Mr. Jordan Farber,

EPA-R2-2017-005081 has been processed with the following final disposition:

This is in response to your Freedom of Information Act (FOIA) request, identified above, dated 03/20/2017, that you submitted to the U.S. Environmental Protection Agency (EPA). Your request seeks environmental information on the following:

Scally Place (Block 228, Lots 12, 792, and 793) in the Village of Westbury, Nassau County, New York

The information that you are seeking is publicly available on EPA's *MyPropertyInfo* online database. The database will provide you with information concerning records the EPA has about a specific property, and it can be accessed at the link below:

http://www.epa.gov/myproperty/

Because this information is publicly available, your FOIA request for this information is being administratively closed, in accordance with EPA's FOIA regulations. See 40 C.F.R. Part 2, Subpart A. Please note you should perform the initial search of a property of interest by visiting the above link. If your search produces results, then proceed with an information request for additional records under FOIA. Your FOIA submittal should be accompanied by these results. Be advised, soon we will discontinue the processing of requests seeking data that is available in the public domain. Instead, you should follow the above steps.

If you consider this response to be a denial of your request, you may appeal this determination to the National Freedom of Information Office, U.S. EPA, 1200 Pennsylvania Avenue, N.W. (2822T), Washington, DC 20460 (U.S. Postal Service Only). Only items mailed through the United States Postal Service may be delivered to 1200 Pennsylvania Avenue, N.W. If you are submitting your appeal via hand delivery, courier service, or overnight delivery, you must address your correspondence to 1301 Constitution Avenue, N.W., Room 6416J, Washington, DC 20001. Your appeal must be made in writing, and it must be received no later than 90 calendar days from the date of this letter. The Agency will not consider appeals received after the 90 calendar day limit. Appeals received after 5:00 pm EST will be considered received the next business day. The appeal letter should include the FOIA tracking number listed above. For quickest possible handling, the subject line of your email, the appeal letter, and its envelope, if applicable, should be marked "Freedom of Information Act Appeal." Additionally, you may seek assistance from EPA's FOIA Public Liaison at hq.foia@epa.gov or (202)566-1667, or from the Office of Government Information Services (OGIS). You may contact OGIS in any of the following ways: by mail, Office of Government Information Services, National Archives and Records Administration, Room 2510, 8610 Adelphi Road, College Park, MD 20740-6001; e-mail, ogis@nara.gov; telephone, 301-837-1996 or 1-877-684-6448; and facsimile, 301-837-0348.

This letter concludes our response to your request. Thank you for your interest in this information.

Respectfully,

/s/

Mary Mears
Public Affairs Director
U.S. EPA Region 2 (NJ, NY, PR, the US VI and eight Indian Nations)

Subject: FOIL Request :: W019115-030817

Dear Jordan:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 3/8/2017 and given the reference number FOIL #W019115-030817 for tracking purposes. You may expect the Department's response to your request no later than **4/5/2017**.

Record Requested: **Matrix is requesting any information/files for Scally Place (Block 228, Lots 12, 792, and 793) in the Village of Westbury, Nassau County, New York including but not limited to: underground storage tanks, above ground storage tanks, tanks and building permits, health and environmental violations, discharges/releases of petroleum and hazardous materials, spills, hazardous materials, health and environmental inspections and/or investigations, historic property ownership, existing and former tenants, fires, potable wells, monitoring wells, and septic systems..**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

To: Jordan Farber
Subject: Foil request re: Westbury properties

Mr. Farber,

In regards to your recent Foil request for information on the above address location:
The only information this office has that you have requested is current and historic ownership information for this property.
As ownership information is Public Record, requesting it through Foil is not necessary. I am going to deny your request in regards to Foil and you may
Request deed info (ownership records) by coming into this Office or calling 516-571-3245.
The other information should be directed to the Town of Hempstead.
Sincerely,
Nassau County Clerk Foil Officer

Jordan Farber

Subject: FOIL Request

Good Morning Ted,

Matrix New World Engineering is conducting Phase I Environmental Site Assessments in Westbury and needs to place a FOIL request for relevant information about the sites. We are requesting the following information for Scally Place (Block 228 Lots 12, 792, and 793; 124,382 sq. ft.; owned by the Village of Westbury) and Railroad Avenue (95,193 sq. ft.; owned by the Metro Transit Authority):

Any information/files including but not limited to: underground storage tanks, above ground storage tanks, tanks and building permits, health and environmental violations, discharges/releases of petroleum and hazardous materials, spills, hazardous materials, health and environmental inspections and/or investigations, historic property ownership, existing and former tenants, fires, potable wells, monitoring wells, and septic systems.

These Phase I ESAs are being conducted for the Long Island Rail Road.
Please let me know if you need more information.

Thank you,

Jordan Farber

Westbury, NY 11590	Florham Park, NJ 07932
EDR Inquiry # 4865926.13	Contact: Brian Crespi

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Matrix New World Eng.,Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E 2600).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported
Hydric Status:	Hydric Status: Soil does not meet the requirements for a hydric soil.
Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

Soil Layer Information

	Boundary			Classification			
Layer	**Upper**	**Lower**	**Soil Texture Class**	**AASHTO Group**	**Unified Soil**	**Permeability Rate (in/hr)**	**Soil Reaction (pH)**
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:	loam sandy loam sand
Surficial Soil Types:	loam sandy loam sand
Shallow Soil Types:	sandy loam
Deeper Soil Types:	very gravelly - sand coarse sand

Updated By:	WJPARISH
Site Description:	Location: The Bartlett Tree Company site is located at 345 Union Avenue in the Village of Westbury, Town of North Hempstead.Site Features: The site is approximately 0.4 acres in size. A new facility building is expected to replace the old one. Two additional structures, an equipment garage/pesticide locker and a storage shed have been removed from the site.Current Zoning/Use: The site is currently zoned for commercial use and is located in a commercial/industrial setting. The Bartlett Tree Company provides horticultural services to the surrounding communities. The Long Island Railroad's Westbury train station is located immediately south of the site. There is a residential neighborhood several blocks north of the site.Past Use of the Site: The Bartlett Tree Company has occupied the site since the mid 1950s. Pesticides are stored on-site for use in the horticultural services they provide. Site Geology/Hydrogeology: The water table is encountered approximately 29'-32' below ground surface, depending on seasonal variation. Overburden consists mainly of various size sands and gravels. The site specific groundwater flow direction is south/southwest.

BARTLETT TREE COMPANY, 345 UNION AVENUE, WESTBURY, NY 11590 (Continued)

Env Problem:

Nature and Extent of Contamination: A Remedial Investigation was conducted to delineate the nature and extent of contamination on-site. Based upon the investigation, the primary contaminants of concern were the pesticides aldrin, alpha BHC, chlordane, DDD, DDE, DDT, dieldrin and lindane.Prior to Remediation:Shallow Surface Soil - Surface soil was characterized site-wide by collecting soil samples from zero to two feet below surface in a number of locations including from the following areas of concern: former pesticide storage locker, former open shed, test pit-1, test pit-2, stairway floor drain and mechanic's pit. Levels of pesticides in all soil samples collected from this depth interval were below the commercial use SCOs. All samples were below the protection of groundwater Soil Cleanup Objectives (SCOs) and the majority were below the residential SCOs.Subsurface Soil - Pesticides were detected in a subsurface soil beneath Drywell-1 at levels which exceeded the commercial use and protection of groundwater SCOs. The contaminants were detected in the drywell's bottom samples (approximately 7' below grade) and to a depth of approximately 32' below grade. Groundwater - Pesticides were detected in groundwater at levels which exceeded SCGs. Groundwater is encountered approximately 31 feet below grade. Volatile organic compounds (trichloroethene and cis-1,2-dichloroethene) were detected at levels exceeding SCGs in groundwater upgradient of the site. Levels of VOCs in on-site groundwater are generally non-detect with one detection marginally exceeding the SCG, and is not considered site related.Post-Remediation:Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were pesticides in soil and groundwater. Remediation in the form of source removal (soil excavation) has reduced contaminant levels in subsurface soil to levels meeting either the commercial use or protection of groundwater SCOs. Approximately 438 tons of contaminated soil was excavated and disposed of off-site at permitted disposal facilities. While pesticides in groundwater were found to exceed SCGs, detections were extremely low (parts per trillion) and are expected to diminish to levels meeting SCGs as a result of source removal. A Record of Decision was issued on March 31, 2014 which requires continued monitoring of on-site groundwater and for soil vapor intrusion. An Environmental Easement has been placed on the property and future monitoring will be undertaken pursuant to the

BARTLETT TREE COMPANY, 345 UNION AVENUE, WESTBURY, NY 11590 (Continued)

	Department approved Site Management Plan.
Health Problem:	Since the site is fenced and covered by buildings, asphalt, or concrete, people will not come into contact with residual site-related soil and groundwater contamination unless they dig below the surface. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Although sampling has indicated that impacts to indoor air are not a current concern, the potential exists to inhale contaminants in indoor air due to soil vapor intrusion in on-site building development and occupancy. Insufficient environmental information exists to evaluate the potential for soil vapor intrusion to occur in off-site areas.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SUPERFUND (NON-NPL)

SEMS: Federal CERCLIS

Site ID:	204054
EPA ID:	NY0001408749
Federal Facility:	N
NPL:	Not on the NPL
Non NPL Status:	NFRAP-Site does not qualify for the NPL based on existing information

Following information was gathered from the prior CERCLIS update completed in 10/2013: **:**

Site ID:	0204054

Record Add:	11/18/1999
Record Upd:	07/03/2015
Updated By:	GTBOBERS
Site Description:	Location: The 123 Post Avenue site is located in the Village of Westbury, Nassau County.Site Features: The site consists of a 50' by 189' lot. On the site is a building currently used for dry cleaning and a parking area surrounding the building. The surrounding areas are used for commercial and residential purposes. An elevated LIRR line is adjacent to the south border of the site. Current Zoning and Land Use: This site is currently zoned for commercial use and an active dry cleaner operates on site.Past Use of the Site: Dry Cleaning has been conducted at the site since the 1950s. The site was placed on the NYS Registry of Inactive Hazardous Waste Disposal Sites in December of 1998 after the Nassau County Department of Health performed a facility inspection in July 1995. Operable Units: The site is currently being managed as two operable units, one for on-site (OU-1) and one for the off-site groundwater (OU-2). An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site

123 POST AVENUE, 123 POST AVENUE, WESTBURY, NY 11590 (Continued)

contamination.Site Geology and Hydrogeology: The depth to water is approximately 35 feet and flows to the south-south west. The soils at the site consist of sands and clays to a depth of several hundred feet before bedrock is encountered.

Env Problem: Nature and Extent of Contamination: For OU 1: On-Site AreasBased on the investigations conducted to date the primary contaminant of concern is tetrachloroethene and its breakdown products, trichloroethene and dichloroethene. These contaminants continue to be present in the on-site soils at a concentration up to 190,000 micrograms per kilogram (unrestricted soil cleanup objectives are 1300 micrograms per kilogram) and in the on-site groundwater.Soil Vapor and Indoor Air - tetrachloroethene was detected in soil vapor at elevated concentrations and was also detected in indoor air. For OU 2: Off-Site GroundwaterBased on the investigations conducted to date the primary contaminant of concern is tetrachloroethene and its breakdown products, trichloroethene and dichloroethene.These contaminants were initially detected in the off-site groundwater plume at concentrations up to 5000 micrograms per liter. Between October 2011 and March 2013 oxidant was injected into the plume as part of a pilot study. The injections reduced tetrachloroethene concentrations to less than 800 micrograms per liter. Regardless, these contaminants exceed groundwater standards (5 micrograms per liter) beneath the site and for at least 1800 feet downgradient from the site. Significant Threat: The site is listed on the registry of inactive hazardous waste disposal sites as a class 2 site, representing a significant threat to human health and the environment, it is located within a USEPA designated sole source aquifer, and is in the vicinity of municipal water supply wells.

Health Problem: Soil vapor from the site caused indoor air contamination at several neighboring homes and businesses. The soil vapor extraction system operating at the site has effectively reduced concentrations of tetrachloroethene in these buildings. NYSDOH and NYSDEC will evaluate the need to conduct additional investigations to determine the potential for soil vapor intrusion into structures near the off-site groundwater plume. Direct exposures to the contaminated groundwater are not expected, because the site and surrounding area are served by a public water supply. There are three active public water supply wells nearby. Two are treated to remove volatile organic compound

NASSAU CO. AST: State and tribal registered storage tank lists

Facility ID:	001541
Tank ID:	0034
Tank Location:	Indoors, Aboveground
Capacity (Gal):	00005000
Description:	SODIUM HYDROXIDE
Date Permit Ends:	Not Reported
Tank Status:	In Service
Material Type:	Waste
Tank Material:	Fiberglass Reinforced Plastic
Internal Protection:	None
External Protection:	PAINTED [e.g. asphaltic]
Piping Type:	Other
Leak Detect:	ELECTRONIC
Containment:	DOUBLE WALL TANK
Product Gauge:	Yes
Dispense Method:	2
Fill Type:	Pumped
Install Date:	011996

RMP: Risk Management Plans
Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

E DESIGNATION: E DESIGNATION SITE LISTING
Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

ERP: Environmental Restoration Program Listing

Standard Environmental Record Source: State and tribal Brownfields sites

Search Distance: 0.333 Mile

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

RECORD SOURCES AND CURRENCY

2020 COR ACTION: 2020 Corrective Action Program List

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.25 Mile

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Number of Days to Update: 52 Telephone: 202-586-3559
Last EDR Contact :02/03/2017

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

SEMS: Superfund Enterprise Management System

Standard Environmental Record Source: Federal CERCLIS

Search Distance: 0.333 Mile

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

UMTRA: Uranium Mill Tailings Sites

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.333 Mile

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

US BROWNFIELDS: A Listing of Brownfields Sites

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.333 Mile

RECORD SOURCES AND CURRENCY

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

Standard Environmental Record Source: Historical Gas Stations

Search Distance: 0.125 Mile

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR MGP: EDR Proprietary Manufactured Gas Plants

Standard Environmental Record Source: Former manufactured Gas Plants

Search Distance: 0.333 Mile

RECORD SOURCES AND CURRENCY

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date of Government Version: 08/28/2009

RECORD SOURCES AND CURRENCY

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5' minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW® Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW® Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services. The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

MATRIXNEWORLD
Engineering Progress

Matrix New World Engineering
Prospective Landowner And/Or User Questionnaire

Subject Property Name:	Westbury Parking Lot on Scally Place
Subject Property Address:	Scally Place, Westbury

QUESTION	YES	NO	UNK?
1. Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property?		X	
2. Are you are aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the subject property?		X	
3. Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?		X	
4. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?			X
5. Are you aware of any activity use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?			X
6. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants?		X	
7. Are you aware of commonly known or reasonably ascertainable information about the property? For example: Do you know the past uses of the property?		X	
8. Do you know specific chemicals that are present or once were present at the property?		X	
9. Do you know of spills or other chemical releases that have taken place at the property?		X	
10. Do you know of environmental cleanups that have taken place at the property?		X	
11. Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?			X
12. Has a title search been performed? If yes, please attach.			X
13. Is the property or has the property been used as a gasoline station, motor repair facility, commercial printing, dry cleaners, photo developing, landfill, industrial use, waste treatment or disposal facility?			X
14. Are there currently any damaged or discarded automotive or industrial batteries, pesticides, paints, or other chemicals at the subject property?			X
15. Are there currently any industrial drums or chemicals at the subject property?			X
16. Are you aware of contaminated fill at the subject property? (i.e. Fill dirt from off-site.)			X
17. Are there currently any pits, ponds, or lagoons in connection with waste disposal or treatment at the subject property?			X
18. Are there any current or previous underground storage tanks or aboveground storage tanks at the subject property?			X
19. Are there currently any vent pipes, fill pipes, or access ways protruding from the ground at the subject property?			X
20. Is the subject property served by a private well and or a private septic system?			X
21. Does the property discharge industrial wastewater (excluding sanitary sewer)?			X
22. Are there any monitoring wells at the subject property?

Map Panels

- Digital Data
- Unmodernized Maps
- Unmapped

This map complies with FEMA's standards for the use of digital flood maps. The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. The base map shown complies with FEMA's base map accuracy standards.

The NFHL is a living database, updated daily, and this map represents a snapshot of information at a specific time.

Flood risks are dynamic and can change frequently due to a variety of factors, including weather patterns, erosion, and new development. FEMA flood maps are continually updated through a variety of processes. Users should always verify through the Map Service Center (http://msc.fema.gov) or the Community Map Repository that they have the current effective information.

NFHL maps should not be created for unmapped or unmodernized areas.

MATRIX NO. 16-144

Dear Mr. Aksman:

Matrix New World Engineering (Matrix) is pleased to present this Phase I Environmental Site Assessment (ESA) Report for the above referenced site.

This report summarizes the findings of the site reconnaissance, the review of historic and current uses of the site to identify contamination by hazardous substances or waste, the review of governmental databases, and the review of other pertinent data. No sampling or laboratory analysis of any media was performed as part of this Phase I ESA. As a result of the Phase I ESA, six (6) Recognized Environmental Conditions (RECs) were identified on the Site.

If you have any questions regarding the information contained in this report, please contact us at (973) 240-1800.

Sincerely,

Brian Crespi
Project Manager

Mindy Chassin Horowitz
Program Director

1.0 SUMMARY

Matrix New World Engineering, Land Surveying and Landscape Architecture, P.C. (Matrix) was retained by Gannett Fleming–AECOM Rail Road Expansion Partnership, a Joint Venture between Gannett Fleming Engineers and Architects, PC and AECOM USA, Inc. (the "JV") to provide environmental services to the Metropolitan Transportation Authority (MTA) and Long Island Rail Road (LIRR) in support of the proposed installation of a third track, railway grade crossing separations and/or closures and infrastructure improvements between the Floral Park Station and the Hicksville Station, known as the "LIRR Expansion Project".

As part of the project, Matrix has been retained to complete a Phase I Environmental Site Assessment (ESA) for the Second Street Parking Lot, located at 161-163 2nd Street (the "Site"), Village of Mineola, Town of North Hempstead, Nassau County, New York, to be acquired as part of the project. The Phase I ESA has been performed in accordance with Attachment B of the LIRR's Technical Scope of Work (TSOW) for the LIRR Expansion Project from Floral Park to Hicksville (January 2016). The purpose of the Phase I ESA is to gather information to be used in the acquisition process. This Phase I ESA has been prepared in general accordance with the American Society for Testing and Materials (ASTM) Designation E 1527-13 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and ASTM Designation E 2600-15 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions.* The following report summarizes the conclusions and opinions representing Matrix's best professional judgment based on information obtained during the Phase I ESA.

1.1 Site Summary

The People of the State of New York own and operates a parking facility in Village of Mineola, Town of North Hempstead, New York (the "Site"). The approximately 0.995-acre site is improved with an approximately 43,364 square-foot paved surface. The site was vacant land until it was developed in 1917 as a meat-packing plant by Wilson and Company. The meat-packing plant operated until 2009. Since 2009, The People of the State of New York own the property and it is used as an asphalt parking lot.

1.2 Recognized Environmental Conditions

Matrix performed a Phase I ESA of the Site at 161-163 2nd Street in Village of Mineola, Town of North Hempstead, New York in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 8.0 of this report. This assessment has revealed six Recognized Environmental Conditions (RECs) in connection with the Site:

- The Site, under the names New York State Department of Transportation (NYSDOT) – Former Kozy Shack (161 2nd Street) and NYSDOT – Former Mineola Realty (163 2nd Street) was listed twice as a Resource Conservation and Recovery Act (RCRA) Non-Generators/No Longer Regulated (NONGEN/NLR RCRA) facility. The database listing, from June 2002, did not provide information on the materials handled on-Site, although it is noted that hazardous materials were not generated on-Site. The former handling of hazardous materials on-Site is considered a REC.
- There are indications of potential petroleum storage on-Site. Under the name Mid-Island Fruit & Produce, 163 2nd Street, the Site was listed on the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) Underground Storage Tank (UST) database with two USTs, the sizes of the USTs are not noted; however, the USTs are reported as being installed on 1/1/1978 and 2/22/1961 with a last test date of 3/26/1996 for both. On the 1925 through 1970 Sanborn maps, a gasoline tank is shown just east of the garage on-Site. The former storage of potential petroleum products in a UST on-Site is considered a REC.
- Vapor Encroachment Condition (VEC): A Tier 1 Vapor Encroachment Screen (VES) was completed by Matrix using EDR's Vapor Encroachment Screen Worksheet. Based on available information, a potential VEC was identified at the Site. Please see Section 4.4 below for further discussion on the Tier 1 VES.
- Dry Cleaner/Historic Dry Cleaners – Sumners Cleaners, 100 Mineola Blvd, is listed on the NYSDEC Registered Drycleaners (NY DRYCLEANERS) and EDR Historic Drycleaners (HIST DRYCLEANERS). Based on the proximity to the Site (0.101 miles to the northwest) across 2nd Street and the presumed groundwater flow direction, there is potential impact to the site from Sumners Cleaners should a release have occurred.
- The property directly adjacent to the east of the Site was used as a coal yard, identified as the Birdsall Coal Co. on the 1917 through 1950 Sanborn maps.
- Potential petroleum storage is noted at three facilities directly across 2nd Street, in the presumed upgradient groundwater flow direction. One automobile garage located at 162 2nd Street had a gasoline tank, as shown on the Sanborn map in 1925. A dwelling at 154 2nd Street was shown with two gasoline tanks in 1937. The third, a property to the northeast of the Site, is shown as a printing facility with three gasoline tanks in 1937 through 1963 Sanborn maps. The potential for leaks to have occurred from these USTs in proximity to the Site is considered a REC.

A Recognized Environmental Conditions map is presented as Figure 5.

1.3 Controlled RECs

Controlled Recognized Environmental Conditions (CRECs) are recognized environmental conditions resulting from a past release of hazardous substances or petroleum products that have been addressed to the satisfaction of the applicable regulatory authority with hazardous substance or petroleum products allowed to remain in place subject to the implementation of required controls. Matrix did not identify any CRECs, as defined by the ASTM Standard.

1.4 Historical RECs

Historical Recognized Environmental Conditions (HRECs) are recognized environmental conditions resulting from a past release of hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the property to any required controls. No HRECs were identified for the Site. Matrix did not identify any HRECs, as defined by the ASTM Standard.

- At 163 2nd Street, Mid Island Wholesale is listed on the NYSDEC spills database (NY SPILLS) under Spill number 9516021, opened on March 14, 1996. An unknown quantity of #2 fuel oil was spilled as a result of a leak from the fuel line to the furnace. The spill occurred on concrete and was cleaned with Speedi Dri. The status of the spill is closed as of May 21, 1997.
- At 161 2nd Street, the Site is listed as Lilco with Spill #8701685 assigned on May 30, 1987. The spill of 2 gallons of mineral oil was closed on June 4, 1987.

1.5 De Minimis Conditions

No *de minimis* conditions were observed or identified through interviews or records review of current or historical uses of the Site and adjoining properties.

1.6 Other Findings

The term “other finding” is not defined by ASTM; rather, Matrix uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard. Although not a considered REC based on currently available information, Matrix identified the following other findings based on review of the database reports. Sites within 0.1 miles of the Site and at a higher elevation that were determined to have the potential to impact the Site should a spill have occurred were deemed other findings. These facilities were not identified on any other databases and there are no records of spills or other known sources of contamination from these facilities.

- ABC Car Service is located adjacent to the Site, to the west, along 2nd Street and was listed as being a historic auto station in 1999 and 2000. No other information is provided in the listing. Based on its

proximity to the Site, should a spill have occurred in connection with this facility, there is potential for it to have impacted the Site.

1.7 Significant Data Gaps

Matrix identified significant data gaps associated with the findings. These significant data gaps affect Matrix's ability to assess whether the findings are RECs:

- To date, a response to the Freedom of Information Act (FOIA) and Freedom of Information Law (FOIL) requests submitted to the United States Environmental Protection Agency (USEPA), NYSDEC, Nassau County Clerk and Fire Department and Mineola Municipal Clerk has not been received. A response from this agency will be forwarded upon receipt with recommendations, if necessary.
- In addition, a limitation was encountered in determining the historical use of the subject property. The earliest source of historical information reasonably ascertainable within the time frame of this report from which usage could be determined was a Sanborn Map from 1908. The Sanborn Map shows domestic residence, a storage building, and an unknown structure. Therefore, the ASTM E1527 requirement to determine all obvious uses of the property from the present back to the property's first obvious developed use, or back to 1940, whichever is earlier, could not be achieved. However, it is unlikely that there had been significant prior development; therefore, this data failure is not expected to impact the results of this assessment.

1.8 Non-Scope Considerations

There were no non-scope considerations identified for this Site.

2.0 INTRODUCTION

2.1 Purpose

This Phase I ESA Report has been prepared by Matrix for LIRR for the Second Street Garage, located at 161-163 2nd Street (Block 426, Lots 7, 113, 212 & 213) in the Village of Mineola, Town of North Hempstead, Nassau County, New York. The objective of the Phase I ESA is to evaluate whether current or historical practices associated with the Site or nearby properties have the potential to have created, or to create in the future, a Recognized Environmental Condition (REC) at the Site. The term REC is defined by ASTM Standard 1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on or at a property due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. Historic information and current conditions and operations pertaining to the Site are addressed in this report.

2.2 Detailed Scope-of-Services

The scope of services for this project included a visual reconnaissance of the Site and neighboring properties; review of readily available Federal, state, and local regulatory records; examination of historic information and evaluation of current and past operations and activities on-site. Matrix reviewed/utilized historic aerial photographs, Sanborn Fire Insurance Maps, historic topographic maps and city directories as part of the Phase I ESA. Additionally, a regulatory database search was conducted by Environmental Data Resources Inc. (EDR), of Shelton, Connecticut for information available in governmental databases. The EDR Radius Map Report is provided in Appendix A.

The Phase I ESA also included an initial vapor encroachment screening (VES) to determine if there is a potential for vapors to occur in the subsurface below existing and/or proposed on-site structures from those hazardous substances, petroleum and petroleum products that consist of volatile organic compounds (VOC), semi-volatile organic compounds (SVOC) and inorganic volatile compounds. The VES meets the Tier 1 “non-invasive” screening requirements of ASTM E2600-15.

2.3 Significant Assumptions

Information and records provided by the client, government agencies, and outside vendors retained by Matrix are assumed to be correct and complete.

2.4 Limitations and Exceptions

This Phase I ESA has been prepared for the exclusive use of MTA, LIRR or the JV. It represents a professional opinion and judgment based on information supplied by the present owner of the Site, information collected by

Matrix, and additional data and information provided by governmental agencies. Matrix only warrants that it provides services in accordance with generally-accepted practices in the engineering/environmental site assessment field. No other warranty or representation, either expressed or implied, is included or intended as part of its services, proposals, contracts, or reports. Matrix cannot guarantee, certify, or warrant that the Site is, or is not, free of environmental impairment/liabilities without conducting a site-specific subsurface investigation involving soil and groundwater laboratory analyses. Even with such a program, the data and samples from any given soil boring or monitoring well will indicate conditions that exist only at that location, and may not necessarily apply to the Site as a whole.

In preparing this report, Matrix has relied on certain information provided by Federal, state, and local officials and other parties referenced herein, and on file of government agencies and others that were readily available at the time of this assessment. Although there may have been overlap of this information provided by these various sources, Matrix did not attempt to independently verify the accuracy or completeness of information reviewed or received during the course of this Phase I ESA.

Observations were made on all portions of the Site as indicated in the report.

As part of this assessment, Matrix submitted requests for information via the FOIA and FOIL to various governmental agencies. As of the preparation of this report, these requests may not have been fulfilled. The conclusions of this report are subject to change upon receipt of a response from these FOIA and FOIL requests.

Mold, indoor air quality, asbestos, and lead-based paint surveys are excluded from the scope of this report.

2.5 Special Terms and Conditions

There are no special terms or conditions to the content of the report that are in addition to the scope outlined in Section 2.2.

2.6 User Reliance

This Phase I ESA was performed at the client's request utilizing a format consistent with the table of contents and report format specified in ASTM E 1527-13 Appendix X4.

This assessment is intended, where applicable to the standard of care, to satisfy the requirements of the ASTM Standard Practice for Environmental Site Assessments, as published in ASTM E1527-13. The independent conclusions represent the best professional judgment of the Environmental Professional based on the conditions

that existed and the information and data available to Matrix during the course of this assignment. Factual information regarding operations and conditions provided by the Client, owner, or the representative has been assumed to be correct and complete. The report may be distributed and relied upon by LIRR. Reliance on the information and conclusions presented in this report by other party(ies) is not authorized by Matrix, unless specifically stated.

3.0 SITE DESCRIPTION

On March 13, 2017, a site reconnaissance was conducted by Christiana Seiffer, Environmental Scientist, of Matrix to evaluate current land usage and identify any RECs that may be present throughout accessible portions of the Site and surrounding areas. Appendix B contains photographs taken during the site reconnaissance.

3.1 Location and Legal Description

The Site is located at 161-163 2nd Street in the Village of Mineola, Town of North Hempstead, Nassau County, New York. The Site consists of four parcels (Section 9, Block 426, Lots 7, 113, 212 & 213) which is improved with an asphalt parking lot.

The Site consists of approximately 0.995 acres. The Site is geographically located at 40° 44' 30.10" north latitude and 73° 38' 16.22" west longitude on the Lynbrook, New York, U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle. A Regional Location Map and Topographic Map depicting the Site are presented as Figures 1 and 2, respectively. A Tax Map is presented as Figure 3.

Based on the most recent property cards available online from Nassau County, NY, a two-story building was constructed on lot 7 in 1969. Its exterior walls were constructed of concrete, brick and steel, the building also has chimneys, penthouses and a freight elevator. A structure on lot 113 is a one-story building with basement and is made of concrete and cinder blocks. A copy of the property cards is included in Appendix C. Based on Site observations and review of recent aerial photographs, the buildings have been demolished since at least 2006 and the full Site has been an asphalt-covered parking lot since at least 2009.

3.2 Site General Characteristics

The Site consists of an asphalt parking lot.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map (Mineola, NY, 2017); Google Earth	Ranges from approximately 104 feet above mean sea level (amsl) near the southwestern corner to approximately 106 feet amsl near the northeastern corner.
Topographic Gradient	USGS topographic map; visual observations	Flat on-site, with a gentle downward slope to the South. Regional topography slopes gently downward to the south toward the LIRR tracks.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Hydrology		
Surface Water Runoff	Visual observations	Percolates into the ground surface at unpaved areas or enters catch basins that discharge to the municipal storm sewer system. Several storm drain grates were observed throughout the property.
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	Hempstead Lake, located approximately 7.2 miles to the southwest at its nearest point.
Flood Plain	FEMA*; Facility personnel	The site is not located within a 500-year flood zone. The FEMA Flood Insurance Rate Map (FIRM) is included in Appendix D.
Wetlands	NWI*; Visual observations	There are no federally-designated wetlands on-site. Matrix did not identify any obvious suspected wetlands at the site during the site visit.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map;	Based on the topographic gradient of the Site shallow groundwater likely flows to the southeast.
Depth to Groundwater	USGS Depth to Groundwater Viewer	Specific information regarding depth to shallow groundwater was not readily available, but is expected to be at least 43 feet below ground surface, based on the USGS Long Island Depth to Groundwater Viewer[1]
On-site Wells	Facility personnel; Visual observations	There are no production, monitoring or injection wells on-site
Nearest Groundwater Supply Wells	EDR database report	No groundwater supply wells listed
Geologic Conditions	NCSS*; NRCS Web Soil Survey	Regional soils are defined as Ug – Urban Land
Site Utility Information – To be filled in after site visit		
Heating and Cooling Equipment	Facility personnel	There are no interior areas and thus no heating or cooling equipment associated with the Site.
Electricity Supplier	Facility personnel	There is no electricity service at this site.
Natural Gas Supplier	Facility personnel	There is no natural gas service at the site.
Use of Fuel Oil for Building Heat	Facility personnel	No current or former use of fuel oil reported.

Table 1: Physical Setting and Utility Information		
Conditions	**Source**	**Description**
Water Supplier	Facility personnel; City personnel	No water supplied to Site
Sanitary Sewer	Facility personnel	No sanitary sewers on Site. Sanitary sewage in the area is handled by Nassau County Sewage Disposal Districts #1 and 2
Stormwater System	Visual observations	Five stormwater catch basins were observed throughout the Site. Stormwater is handled by Nassau County Sewage Disposal Districts #1 and 2.
Septic Systems	Facility personnel	No current or former septic systems reported.
Notes: FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory * - Source was provided in the EDR database report. 1 - https://ny.water.usgs.gov/maps/li-dtw10/ .		

3.3 Current Use of the Property

According to *http://lrv.nassaucountyny.gov/* the Site is currently owned by The People of the State of New York and used as a commuter parking lot. A Site Plan is presented as Figure 4.

3.4 Description of Structures, Roads, Other Improvements On-Site

The Site consists of four parcels, irregularly-shaped, which are improved with an asphalt-paved parking lot.

3.5 Current Uses of the Adjoining Properties

The property is in a mixed industrial/residential/commercial land use area. The nearest residential area is located approximately 120 feet northwest of the site. Based on discussions with facility personnel, Matrix's visual observations from the property boundary and public rights-of-way, and a limited review of publicly available information, a general determination of the current use of adjacent properties was developed, as described Table 2.

Table 2: Current Use of Adjacent Properties		
Direction	**Property/Land Use**	**Matrix's Observations**
North	2nd Street. A mixed residential and commercial area is located across 2nd Street.	No apparent exterior manufacturing or chemical storage operations were observed. Pole-mounted transformers observed along 2nd Street, but no staining visible. Residential areas consist of multi-family apartment buildings. No concerns were noted.

Table 2: Current Use of Adjacent Properties		
Direction	**Property/Land Use**	**Matrix's Observations**
East	Advance Computer Management Group, beyond which is Willis Ave.	Pad-mounted transformer at the rear of the building. No stains observed near the transformer. No concerns were noted.
South	LIRR Tracks. Across from the tracks is Front Street.	No apparent contamination visible on or near the tracks. Some scattered debris but no staining visible. No concerns were noted.
West	Several small buildings including two restaurants, a bodega/mini mart, and four boutiques. Beyond the buildings is Main Street.	No apparent contamination visible. Pole-mounted transformers observed along Main Street but no staining visible. Some scattered debris but no staining visible. No concerns were noted.
Notes: During the site visit, Matrix walked or drove by the borders of these properties that are shared with the subject site. Matrix did not enter the neighboring properties.		

3.6 Reason for Performing Phase I

Matrix was retained by MTA, LIRR and the JV to perform a Phase I ESA as part of a due diligence evaluation prior to property acquisition.

4.0 RECORDS REVIEW

4.1 Standard Environmental Record Sources

A regulatory review of the Site and surrounding area was conducted through a search by EDR dated April 5, 2017. The review included inquiries into databases maintained by USEPA, as well as state agencies. A brief description of each database and the search results obtained during the Phase I ESA is presented below, for those databases where records were found within the corresponding search radii. The EDR Radius Map Report in its entirety is attached as Appendix A. The search was conducted in general accordance with ASTM E 1527-13 standards. The Site and surrounding properties were identified on the following databases searched by EDR:

DATABASE SEARCH SUMMARY

Database	Search Distance (Miles)	Site Listed	Properties listed within a one-eighth-mile (0.125) radius	Surrounding Properties Listed
Federal Databases				
RCRA-SQG	0.25	No	3	1

Federal Records

1. Resource Conservation and Recovery Act (RCRA) - Small Quantity Generator (SQG): RCRAInfo is EPA's comprehensive information system, providing access to data supporting the 1976 Resource Conservation and Recovery Act (RCRA) and the 1984 Hazardous and Solid Waste Amendments (HSWA). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous

waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

The Site was not identified on the RCRA-SQG database. Three RCRA-SQG facilities were identified within a ⅛-mile radius of the Site. One facility, Nassau Chromium Plating Co Inc, located on 2nd Street, 0.114 miles and at a higher elevation relative to the Site, is identified as a handler of D001 (ignitable), D002 (corrosive), D006 (Cadmium), and F007 (Spent cyanide from electroplating). Based on the distance from the Site and that there are no reported spills, this facility has limited potential for impact to the Site. Two of these facilities are at a lower elevation, relative to the site, LIRR Mineola Yard is located at West Willis Ave and North Front Street is identified as a historical generator of ignitable waste (D001) and Winthrop University Hospital, located at 200 Old County Road is identified as a handler of multiple chemical products including waste codes U010, U058, U059, U150, and U206. Based on this information there is limited potential for impact to the Site from these RCRA-SQG facilities should a release occur. One other RCRA-SQG facilities was identified between a ⅛-mile and ¼-mile radius of the Site. Based on the distance from the Site, there is limited potential for impact to the site should a release occur. The RCRA-SQG data was last updated on December 28, 2016 (EDR Inc., 2017).

2. Federal RCRA generators list - RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

   The Site was not listed as a RCRA-LQG Facility. One RCRA-LQG facility was identified between a ⅛-mile and 1-mile radius of the Site. Based on the distance from the Site and available information, there is limited potential for impact to the Site from this RCRA-LQG Facility. The RCRA-LQG data was last updated on December 12, 2016 (EDR Inc., 2017).

3. RCRA-CESQG: RCRA Info: is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

   The Site was not listed as a RCRA-CESQG Facility. Two RCRA-CESQG facilities were identified between a ⅛-mile and 1-mile radius of the Site. Based on the distance from the Site and available information, there is limited potential for impact to the Site from these RCRA-CESQG facilities. The RCRA-CESQG data was last updated on December 12, 2016 (EDR Inc., 2017).

4. Federal Delisted NPL site list - Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

   The Site was not listed as a Delisted NPL Facility. No Delisted NPL facilities were identified within a ½-mile radious of the Site. One Delisted NPL facility was identified between a ½-mile and 1-mile radius of the Site. Based on the distance from the Site and available information, there is limited potential for impact to

the Site from this Delisted NPL Facility. The Delisted NPL data was last updated on December 05, 2016 (EDR Inc., 2017).

State Records

5. NY SWF/LF- Solid Waste Facilities/Landfill Sites (NYSDEC Database): SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities, landfills or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

   The Site was not identified as a SWF/LF facility. One SWF/LF facility was identified within a ⅛-mile radius of the Site. Garvies Point Transfer Stations is located at 39 Willis Avenue at a lower elevation than the site and 0.103 miles SE. Garvies Point Transfer station is also listed as a waste transfer station. Based on the lower elevation and no known incidences of landfill leachate leaking off site is limited potential for impact to the Site from this facility. No other SWF/LF facilities were identified between a ⅛-mile and ¼-mile radius of the Site. The SWF/LF data was last updated on January 03, 2017 (EDR Inc., 2017).

6. NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

   The Site was not listed as NY SHWS. Seven NY SHWSs were identified between a ½-mile and 1-mile radius of the Site. Based on the distance from the Site and available information, there is limited potential for impact to the Site from this NY SHW Site. The NY SHWS data was last updated on November 14, 2016 (EDR Inc., 2017).

7. NY LTANKS - Leaking Storage Tank Incident Reports: These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

   The Site was not identified as a NY LTANKS facility. Eight NY LTANKS facilities were identified within a ⅛-mile radius of the Site and are listed below:

Site Name	Address	Tank Contents	Distance	Elevation	Spill Status
Great Neck Saw Manufacturing	435 First Street	#2 Fuel Oil	<1/8 mile	Lower	Closed
Foxes	79 Main Street	#2 Fuel Oil	<1/8 mile	Lower	Closed
516 E. Adams	10-115 Main Street	Gasoline	<1/8 mile	Higher	Closed
Post Office	North Main Street	#2 Fuel Oil	<1/8 mile	Higher	Closed
NYNEX	60 Main Street	Diesel	<1/8 mile	Lower	Closed
Boulevard Towers	190 1st & Main Street	#4 Fuel Oil	<1/8 mile	Higher	Closed
Consumer Affairs	160 Old Country Road	#2 Fuel Oil	<1/8 mile	Lower	Closed
CITI Bank	200 Old Country Road	#2 Fuel Oil	<1/8 mile	Lower	Closed

Based on the information provided and the closed status of the NY LTANKS listings, there is limited potential for impact to the Site from these NY LTANKS facilities.

Thirty-nine NY LTANKS facilities were identified between a 1/8-mile and 1/2-mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from these NY LTANKS facilities. The NY LTANKS data was last updated on February 6, 2017 (EDR Inc., 2017).

8. NY UST - Petroleum Bulk Storage (PBS) Database (NYSDEC Database): The UST database contains registered USTs, with petroleum storage capacities in excess of 1,100 gallons and less than 400,000 gallons, regulated under Subtitle I of the RCRA. The data come from the Department of Environmental Conservation's NYSDEC Petroleum Bulk Storage (PBS) Database.

   The Site is identified as a NY UST facility with two removed USTs. Listed as Mid-Island Fruit and Produce, located at 163 2nd Street, the sizes of the USTs are not noted and there is no official closure date listed; however, the USTs are reported as being installed on 1/1/1978 and 2/22/1961 with a last test date of 3/26/1996 for both. The presence of the Site on the UST database is identified as a REC.

   Six NY UST facilities were identified within a ⅛-mile radius of the Site and are listed below:

Site Name	Address	Tank Details	Distance	Elevation	Status
Stanper Foods Corp	80 Willis Ave	N/A	<1/8 mile	Higher	Removed
Verizon New York	60 Main Street	N/A	<1/8 mile	Lower	In Service
Boulevard Towers	190 First Street	Double-walled fiberglass	<1/8 mile	Higher	In Service
33 Willis Ave. Realty LLC	33 Willis Ave	Steel	<1/8 mile	Lower	In Service
Property	160 Old Country Road	Double-walled fiberglass	<1/8 mile	Lower	In Service
Western Beef	61 2nd Street	N/A	<1/8 mile	Higher	Removed

   There are no known incidences of the USTs leaking, or of violations or spills associated with the USTs listed above indicating limited potential for impact to the Site from these NY UST sites.
   Twelve facilities were identified between a ⅛-mile and 1-mile radius of the Site. Based on their distance from the Site and available information, there is limited potential for impact to the Site from these NY UST facilities. The NY UST data was last updated on December 28, 2016 (EDR Inc., 2017).

9. NY AST - Petroleum Bulk Storage (NYSDEC Database): The AST database contains registered ASTs. The data comes from the NYSDEC's PBS Database.

   The Site is not identified as a NY AST facility. Three NY AST facilities were identified within a ⅛-mile radius of the Site and are listed below:

Site Name	Address	Tank Details	Distance	Elevation	Status
Day-Op Center of Long Island	110 Willis Ave.	N/A	<1/8 mile	Higher	Active
Winthrop Institute for Care	120 Mineola Boulevard	N/A	<1/8 mile	Higher	Active
Nassau Chromium Plating	122 2nd Street	Nickle Plating Solution – Double Wall steel AST	<1/8 mile	Higher	Active
		Sulfuric Acid – Steel AST within dike and pad			
		Brass Plating Solution – Steel			

		AST within dike and pad			
		Phosphoric Acid – Steel AST within dike and pad			
		Tin Plating Solution – Steel AST within dike and pad			
		Sodium Hydroxide– Double wall FRP AST			

There are no known incidences of leaking, violations or spills at the Site indicating limited potential for impact to the Site from these NY AST sites. Five facilities were identified between a ⅛-mile and ¼-mile radius of the Site. Based on their distance from the Site and available information, there is limited potential for impact to the Site from these NY AST facilities. The NY AST data was last updated on December 28, 2016 (EDR Inc., 2017).

10. NY TANKS -Storage Tank Facility Listing (NYSDEC Database): This database contains records of facilities that are or have been regulated under the PBS Program. Tank information for these facilities may not be releasable by the state agency.

    The Site is not identified as a NY TANKS facility. Two NY TANKS facilities were identified within a ⅛-mile radius of the Site and are listed below:

Site Name	Address	Tank Details	Distance	Elevation	Status
Day-Op Center of Long Island	100 Willis Ave	UST Diesel	<1/8 mile	Higher	N/A
Tilden Car Care Center	61 Willis Ave	Indoor, AST Waste Oil	<1/8 mile	Lower	N/A

    There are no known incidences of leaking, violations or spills at these sites, indicating limited potential for impact to the Site from these NY TANKS sites. One NY TANKS facility was identified between a ⅛-mile and ¼-mile radius of the Site. Based on the distance to the Site, there is limited potential for impacts to the Site from this NY TANKS listing. The NY TANKS data was last updated on December 28, 2016 (EDR Inc., 2017).

11. NY VCP - Voluntary Cleanup Agreements (NYSDEC): New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The VCP was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

    The Site was not identified as a NY VCP facility. One NY VCP facility was identified within a ⅛-mile radius of the Site at a lower elevation, Mineola G16 (LIRR) located at Main Street and Front Street. A site assessment was conducted by the LIRR in August 1999, which identified mercury contamination. The LIRR entered this site into the VCP in 2004. A fence limits access to the site so the public is unlikely to come in contact with surface contaminants, if present. Based on the status of this remediation and lower elevation relative to the Site, there is limited potential for impact to the Site from this VCP facility. No NY VCP facilities were identified between a ⅛-mile and ¼-mile radius of the Site. The NY VCP data was last updated on February 6, 2017 (EDR Inc., 2017).

Other Ascertainable Records

12. NY SPILLS Information Database (NYSDEC Database): Data collected on spills reported to NYSDEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986 through today.

    The Site is listed twice on the NY SPILLS database. At 161 2nd Street, the Site is listed as Lilco with Spill #8701685 assigned on May 30, 1987. The spill of 2 gallons of mineral oil was closed on June 4, 1987. At 163 2nd Street, Mid Island Wholesale is also listed as a NY SPILLS site under Spill number 9516021, opened on March 14, 1996. An unknown quantity of #2 fuel oil was spilled as a result of a leak from the fuel line to the furnace. The spill occurred on concrete and was cleaned with Speedi Dri. Both spills are considered HRECS. The status of the spill is closed as of May 21, 1997.

    Twenty-seven NY SPILLS facilities were identified within a ⅛-mile radius of the Site and are listed below:

Site Name	Address	Spill Details	Quantity	Distance	Elevation	Status
Great Neck Saw Company	165 E 2nd Street	Waste Oil	300-gallons	<1/8 mile[1]	Lower	Closed
Roadside	90 Main Street	Non PCB Transformer oil	1-gallon	<1/8 mile	Lower	Closed
Spill # 9613708	2nd Street and Main	Gasoline	10-gallons	<1/8 mile	Lower	Closed
Substation	Main and Front Street	Dielectric Fluid	5-gallons	<1/8 mile	Lower	Closed
LIRR	Main Street/ Main Line #2	Petroleum	N/A	<1/8 mile	Lower	Closed
Multi-Use Building	178 2nd Street	#2 Fuel Oil	N/A	<1/8 mile	Higher	Closed
Former Fuel Oil Depot	80 Wills Ave	#2 Fuel Oil	N/A	<1/8 mile	Higher	Closed
Lilco	Front St. & Wills Ave	Non PCB Oil	1-gallons	<1/8 mile	Lower	Closed
John Miles	Willis Ave LIRR	Gasoline	4-gallons	<1/8 mile	Lower	Closed
LIRR E/O Mineola Station	Willis Ave	Waste Oil	N/A	<1/8 mile	Lower	Closed
First Presbyterian Church	Main and First Street	#2 Fuel Oil	1-gallon	<1/8 mile	Higher	Closed
Railroad Crossing	Willis Ave	Gasoline	8-gallons	<1/8 mile	Lower	Closed
Poss-Beavertown Trucking	3rd Street	Diesel	50-gallons	<1/8 mile	Lower	Closed
Lilco	3rd Street W/O Main St	Non PCB Oil	40-gallons	<1/8 mile	Lower	Closed
NYNEX	60 Main Street	Diesel	44-gallons	<1/8 mile	Lower	Closed
Bell Atlantic	60 Main Street/3rd	Antifreeze	N/A	<1/8 mile	Lower	Closed

[1] Great Neck Saw is geolocated by EDR as being less than 1/8-mile away, but it is actually located more than ½-mile away.

Site Name	Address	Spill Details	Quantity	Distance	Elevation	Status
	floor					
Roadway	190 1st at Main Street	#4 Fuel Oil	40-gallons	<1/8 mile	Higher	Closed
Apartments	190 1st Street	#2 Fuel Oil	N/A	<1/8 mile	Higher	Closed
Roadway	190 1st Street/Mineola Blvd	#4 Fuel Oil	50-gallons	<1/8 mile	Higher	Closed
Feiber Management	104 Mineola Blvd	#2 Fuel Oil	N/A	<1/8 mile	Higher	Closed
Commercial Building	137 Willis Ave	#2 Fuel Oil	N/A	<1/8 mile	Higher	Closed
Dr Sher	135 & 137 Mineola Blvd	#2 Fuel Oil	1-gallons	<1/8 mile	Higher	Closed
Consumer Affairs	160 Old country Road	#2 Fuel Oil	2-gallons	<1/8 mile	Lower	Closed
Winthrop University Hospital	231 2nd Street	#2 Fuel Oil	3-gallons	<1/8 mile	Higher	Closed
Unknown	200 2nd Street	#2 Fuel Oil	1-gallons	<1/8 mile	Higher	Closed
The Hollows	61 2nd Street	Gasoline	N/A	<1/8 mile	Higher	Closed
Triangle Petroleum	Mineola Blvd. & 1st St	#2 Fuel Oil	N/A	<1/8 mile	Higher	Closed

Based on the closed status of these listings and relative locations, there is limited potential for impact to the Site from these NY SPILLS facilities. The NY SPILLS data was last updated on February 6, 2017 (EDR Inc., 2017).

13. RCRA NonGen/NLR RCRA - Non Generators/No Longer Regulated (NYSDEC Database): RCRA Info is EPA's comprehensive information system, providing access to data supporting the 1976 RCRA and the 1984 HSWA. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

    The Site was listed twice as a RCRA NonGen/NLR RCRA facility. NYSDOT – Former Kozy Shack and NYSDOT – Former Mineola Realty, located at 161 and 163 2nd Street, respectively, are RCRA NonGen/NLR RCRA facilities though the material handled is not listed. The former usage of hazardous materials on-Site is considered a REC.
    Eleven RCRA NonGen/NLR RCRA facilities were identified within a ⅛-mile radius of the Site and are listed below:

Site Name	Address	Details	Distance	Elevation
Main Street Cleaners & Tailors	84 Main Street	Halogentated Solvents	<1/8 mile	Lower
Sunohio PCBX Unit LIRR	Main and Front Street	PCBs	<1/8 mile	Lower
K S Auto	74 Willis Ave	Ignitable Waste, Cadmium, Lead, Benzene, TCE, Xylene	<1/8 mile	Lower

Tilden Car Care Center	61 Willis Ave	Ignitable Waste, Lead, TCE	<1/8 mile	Lower
US Postal	160 1st Street	Ignitable Waste, Corrosive Waste, Lead	<1/8 mile	Higher
Body Connection Chiropractic	156 1st Street	N/A	<1/8 mile	Higher
Mc Court Mary MC	156 1st Street	Ignitable Waste, Silver	<1/8 mile	Higher
Sumners Cleaners	100 Mineola Blvd	Halogenated Solvents	<1/8 mile	Higher
Nassau Chromium Plating Co. Inc.	112-122 2nd Street	N/A	<1/8 mile	Higher
South Shore Plating Co. Inc.	112-122 2nd Street	N/A	<1/8 mile	Higher
Economy Food	61 2nd St.	Ignitable	<1/8 mile	Higher

Sumners Cleaners is located 0.101 miles to the west of the Site and is also listed on the DRYCLEANERS and HIST DRYCLEANERS. Based on the presumed groundwater flow direction, there is potential impact to the site from Sumners Cleaners and this site is considered a REC.

For the other facilities listed above, there are no known incidences of leaking, violations or spills, indicating limited potential for impact to the Site from these RCRA NonGen/NLR RCRA facilities.

Ten RCRA NonGen/NLR RCRA facilities were identified between a ⅛-mile and 1-mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from these RCRA NonGen/NLR RCRA facilities. RCRA NonGen/NLR RCRA SPILLS data was last updated on December 28, 2016 (EDR Inc., 2017).

14. ROD: Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

    The Site was not listed as a ROD Facility. One ROD facility was identified between a ½-mile and 1-mile radius of the Site. Based on the distance from the Site and available information, there is limited potential for impact to the Site from this ROD Facility. The ROD data was last updated on November 11, 2016 (EDR Inc., 2017).

15. NY DRYCLEANERS Registered Drycleaners (NYSDEC Database)- A listing of all registered dry cleaning facilities.

    The Site was not identified as a NY DRYCLEANERS facility. One NY DRYCLEANERS facility was identified within a ⅛-mile radius of the Site. Sumner's Cleaner is located at 100 Mineola Blvd. at a higher elevation and 0.101 miles away to the West. Based on the close proximity to the Site and presumed groundwater flow direction, there is potential impact to the site from Sumners Cleaners, which is also listed on the HIST DRYCLEANERS. This dry cleaner is considered a REC.

    One NY DRYCLEANERS facility was identified between a ⅛-mile and ¼-mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from this NY DRYCLEANERS facility. The NY DRYCLEANERS data was last updated on December 12, 2016 (EDR Inc., 2017).

16. NY MANIFEST - Facility and Manifest Data (NYSDEC Database): Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

The Site was not identified as a NY MANIFEST facility. Eight NY MANIFEST facilities were identified within a ⅛-mile radius of the Site and are listed below:

Site Name	Address	Distance	Elevation
Great Neck Saw Company	165 E 2nd St.	<1/8 mile[2]	Lower
Main St. Cleaners and Tailors	84 Main St.	<1/8 mile	Lower
Tilden Car Care Center	61 Willis Ave.	<1/8 mile	Lower
LIRR – Mineola Yard	W. Wills Ave. and N. Front Street	<1/8 mile	Lower
US Postal	160 1st Street	<1/8 mile	Lower
Sumners Cleaners	100 Mineola Blvd.	<1/8 mile	Higher
Nassau Chromium Plating Co. Inc.	112-122 2nd Street	<1/8 mile	Higher
Winthrop University Hospital	200 Old Country Road	<1/8 mile	Lower

Based on the distance to the Site and the nature of the material, there is limited potential for impact to the Site from these NY MANIFEST facilities, with the exception of Sumners Cleaners, which is discussed elsewhere as a REC due to its close proximity to the Site. Nine NY MANIFEST facilities were identified between a ⅛-mile and ¼-mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from these NY MANIFEST facilities. NY MANIFEST data was last updated on February 1, 2017 (EDR Inc., 2017).

17. PA MANIFEST: The PA MANIFEST database provides hazardous waste manifest information. The PA MANIFEST database is administered by the Pennsylvania DEP.

    The Site was not identified on the PA MANIFEST database. No PA MANIFEST facilities were identified within a ⅛-mile radius of the Site. One PA MANIFEST facility, Winthrop University Hospital, was identified at 259 1st Street, 0.225 miles west of the Site and at a higher elevation relative to the Site. Based on the distance from the Site, there is limited potential for impact to the Site from this PA MANIFEST facility. The PA MANIFEST data was last updated on December 31, 2015 (EDR Inc., 2017).

18. NJ MANIFEST - Manifest Information (NYSDEC Database): Hazardous waste manifest information.

    The Site was not identified as a NJ MANIFEST facility. One NJ MANIFEST facility was identified within a ⅛-mile radius of the Site. Winthrop University Hospital is located at 200 Old Country Road and at a lower elevation than the Site. Based on the distance to the Site and the nature of the material, there is limited potential for impact to the Site from these NJ MANIFEST facilities. Two NJ MANIFEST facilities were identified between a ⅛-mile and 1-mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from these NJ MANIFEST facilities. The NJ MANIFEST data was last updated on February 9, 2017 (EDR Inc., 2017).

19. RI MANIFEST - Manifest Information (NYSDEC Database): Hazardous waste manifest information.

    The Site was not identified as a RI MANIFEST facility. One RI MANIFEST facility was identified within a ⅛-mile radius of the Site. Nassau Chromium Plating Co. Inc. was located at 2nd Street at a higher elevation. There are no known incidences of leaking, violations or spills at the Site indicating limited potential for impact to the Site from this RI MANIFEST. No RI MANIFEST facilities were identified between a ⅛-mile and 1-mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from these RI MANIFEST facilities. The RI MANIFEST data was last updated on February 21, 2017 (EDR Inc., 2017).

[2] Great Neck Saw is geolocated by EDR as being less than 1/8-mile away, but it is actually located more than ½-mile away.

20. EDR Hist Auto - EDR Exclusive Historic Gas Stations: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort present unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

    The Site was not identified as a EDR Hist. Auto facility. Four EDR Hist. Auto facilities were identified within a ⅛-mile radius of the Site and are listed below:

Site Name	Address	Distance	Elevation
ABC Car Service	169 2nd Street	<1/8 mile (adjacent to west)	Lower
K S Auto Repair	74 Willis Ave	<1/8 mile	Lower
Tilden SSL Auto Repairs	61 Wills Ave	<1/8 mile	Lower
Dawson's Auto Care	200 Old Country Rd	<1/8 mile	Lower

    ABC Car Service is located adjacent to the Site, to the west, along 2nd Street and was listed as being a historic auto station in 1999 and 2000. No other information is provided in the listing. Based on its proximity to the Site, should a spill have occurred in connection with this facility, there is potential for it to have impacted the Site.

    Based on the relative lower elevation to the Site for the other three listings, there is limited potential for impact to the Site from these EDR Hist. Auto facilities. No EDR Hist. Auto facilities were identified between a ⅛-mile and 1-mile radius of the Site. Based on the distance to the Site, there is limited potential for impact to the Site from these EDR Hist. Auto facilities.

21. EDR Hist Cleaner EDR Exclusive Historic Dry Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

    The Site was not identified as a EDR Hist. Cleaner facility. Two EDR Hist. Cleaner facilities were identified within a ⅛-mile radius of the Site and are listed below:

Site Name	Address	Distance	Elevation
Sumners Cleaners	100 Mineola Blvd	<1/8 mile	Higher
Adelphi French Dry Cleaners	204 Station Plz N.	<1/8 mile	Lower

    Based on the proximity to the Site and presumed groundwater flow direction, there is potential impact to the site from Sumners Cleaners, which is located 0.101 miles to the west. This facility is also listed on the DRYCLEANERS. This historic dry cleaner is considered a REC.

No EDR Hist. Cleaner facilities were identified between a ⅛-mile and 1-mile radius of the Site. This database was last updated on October 27, 2016.

22. EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

    The Site was not listed as a EDR MGP Facility. One EDR MGP facility was identified between a ⅛-mile and 1-mile radius of the Site. Based on the distance from the Site and available information, there is limited potential for impact to the Site from this EDR MGP Facility.

Additional Records

23. Orphan Sites: The EDR Report also identifies "Orphan Sites" which are sites identified on the EDR database but, due to poor or inadequate address information, their locations relative to the Site could not be mapped. Three "Orphan Sites" were identified in the EDR Radius Map Report. It does not appear that any of the "Orphan Sites" are located immediately adjacent to the Site (EDR Inc., 2017).

4.2 Additional Environmental Record Sources

Matrix contacted the USEPA, NYSDEC, Nassau County Clerk, Nassau County Fire Department and the Mineola Fire Department and Department of Buildings regarding environmental files for the Site. Copies of FOIA and FOIL requests and responses are provided in Appendix C.

Responses from all of the agencies requested have not been received at this time. Responses received to date are summarized below:

- USEPA
- NYSEDC
- Nassau County Health Department
- Nassau County Fire Department
- Mineola Department of Buildings

4.3 Historical Use Information on the Property and Surrounding Properties

4.3.1 Sanborn Maps

A search was made through Environmental Data Resources (EDR), Inc. of Shelton, Connecticut for historical fire insurance maps (e.g., Sanborn Maps) for the Site. Fire insurance maps were initially produced by private companies for the insurance industry to provide information on fire risks to buildings and other structures. Fire insurance maps serve as a historical resource for evaluating the potential for site contamination based on the history of past use. Sanborn Maps for the years 1908, 1917, 1925, 1937, 1950, 1961, 1963 and 1970. A copy of

Certified Sanborn Map Report is included in Appendix E. Additional coverage for each year is available online from EDR's Lightbox application, available via the hyperlink in Appendix A of this report.

1908 Sanborn Map

The 1908 Sanborn Map indicates that two rectangular buildings are located at the northern edge of the Site, with the larger building identified as storage. There is also a salt and fertilizer shed and a wind mill at the western border of the Site. A two-story residential dwelling is depicted towards the southern property border of the Site. The properties adjacent to the eastern Site boundary do not indicate any structures with E.E. Birdsall Masons and Materials Coal & Wood further to the east, across Willis Ave. The Oyster Bay Branch of the LIRR is depicted to the south. Several to the west of the site appear to be commercial with second story offices or residences. The shops include a tailor, fruit store, barber, wagon shed (with flour and feed and hay storage) with a gasoline barrel depicted southwest of the salt and fertilizer storage building, along the western boundary, post office and general store. Properties to the north, across 2nd Street include both residential and commercial, with the printing facility to the northwest (that notes a gasoline building), and a horseshoeing shop. Mellen & Svoboda Wagon Works facility is shown to the northeast, at the corner of 2nd St and Willis Ave.

1917 Sanborn Map

The 1917 Sanborn Map identifies the majority of the Site as the Wilson & Co. Packers Depot. An office building is depicted on the northern portion of the Site with an attached cold storage building and garage buildings. There is a receiving dock at the rear of the building with a rail spur running east-west across the site, connecting to the LIRR Oyster Bay Line. To the west of the cold storage building is an auto shed. There is another unnamed structure to the west of the office and the two-story dwelling remains on the southern portion of the property. The previously-depicted windmill, building used for salt and fertilizer storage and gasoline barrel is no longer shown. The LIRR Main Line tracks have not changed, but the platform and office is now shown south of the tracks along Front Street, in place of the freight house, as well as a tool house and office north of the tracks. The adjacent properties to the west of the Site include a tailor, cobbler, tobacco shop, barber, open air picture theater, enclosed picture theater, a drug store, post office and a general store. Properties to the north, across 2nd Street are still mainly residential and commercial, with the printing facility changed to a furniture store (to the northwest), the horseshoeing shop is now identified as a blacksmith and a wagon works facility (to the northeast) still present. The property directly adjacent to the east of the Site is identified as the Birdsall Coal Co, with coal bins and a rail spur. A sub-power station for the LIRR is shown to the southwest.

1925 Sanborn Map

The 1925 Sanborn Map indicates that the site is now identified as Wilson and Co. Meat Depot. Two new rectangular one-story stores are now present on the northwest corner of the Site on 2nd Street. A gasoline tank is shown just east of the garage on-Site. Properties to the north across 2nd Street are no longer labeled with their uses, but generically labeled as stores and dwellings. One automobile garage located at 162 2nd Street has a gasoline tank. No other significant changes to the Site or surrounding area were illustrated since the 1917 Sanborn Map. Well south of the site, across the tracks, a building labeled painting has replaced a former bank and YMCA.

1937 Sanborn Map

The 1937 Sanborn Map indicates that a grocery warehouse is now attached to the two rectangular stores in the northwest portion of the Site, incorporating them into the meat depot complex. The dwelling on the southern portion of the Site is no longer present and the area has been developed with a wood truss storage facility. The garage and gasoline tank at 162 2nd Street are no longer shown. The dwelling at 154 2nd Street has two gasoline tanks. The property to the northeast of the Site, formerly a wagon works and carriage house, is now a printing facility with three gasoline tanks. Knickerbocker Ice Co., to the east across Willis Avenue now shows a gas tank. No other significant changes have occurred to the surrounding area since the 1925 Sanborn Map.

1950 Sanborn Map

The 1950 Sanborn Map now identifies the one of the two former stores on the northwestern portion of the Site as a wholesale fruit store. The structure that was the garage is now identified as cold storage. Adjacent to the west, most the properties remain the same except that a photo engraving, dress factory and machine shop appear in the southwestern portion of the lot, at the intersection of Front and Main Streets. To the northeast, the printing facility is now a beer warehouse and the three gasoline tanks are no longer shown. Further north, a filling station is shown at the intersection of Willis Ave and Copley Place. No other significant changes have occurred to the surrounding area since the 1937 Sanborn Map.

1961 Sanborn Map

The 1961 Sanborn Map indicates that the two former stores on the northwestern portion of the Site are now identified as wholesale meats and the complex has extended further south to incorporate the land that was formerly occupied by the automobile garage. The property adjacent to the Site to the east is now identified as Wholesale Toys Warehouse. Further to the east, the Knickerbocker Ice Co. is no longer shown but the gasoline tank remains, and is occupied by a new building labeled factory. Two oil tanks are shown along the LIRR Oyster Bay Branch, near the intersection of Willis Ave and 2nd St. An electronics equipment manufacturer is shown further east along 2nd St, and an auto sales and service shop now surround the filling station at Willis Ave and Copley Pl. The properties directly adjacent to the west of the Site now includes a book binding shop, two machine

shops, radiator warehouse and clothing manufacturer. No other significant changes have occurred to the surrounding area since the 1950 Sanborn Map.

1963 Sanborn Map

The 1963 Sanborn Map indicates that the building adjacent to the Site to the east is now vacant, although the building is still present. No other significant changes have occurred to the Site or surrounding area since the 1950 Sanborn Map.

1970 Sanborn Map

The 1970 Sanborn Map indicates that the two former stores on the northwestern portion of the Site are now used for wholesale produce. The property directly east of the Site is now used for toy storage. The dwellings and gasoline tanks previously shown at 154 2nd Street are no longer present. The filling station at Willis Ave and Copley Pl is no longer shown. The factory to the east is now labeled as metal products manufacturing and the oil tanks along the railroad tracks are no longer present. No other significant changes occurred to the Site or surrounding area since the 1961 Sanborn Map.

4.3.2 Aerial Photographs

An inquiry was made with EDR to obtain historical aerial photographs for the Site. Aerial photographs were reviewed for the years 1938, 1943, 1947, 1951, 1953, 1962, 1966, 1976, 1980, 1984, 1994, 1991, 2006, 2009, and 2011. These photographs were used to determine past land usage and major improvement to the Site and surrounding area. A copy of EDR Aerial Photo Decade Packages is included in Appendix F.

1938 Aerial Photograph (scale: 1" = 500')

The 1938 EDR aerial photograph indicates that the Site is comprised of various structures, which appear to be commercial. A rail spur is visible extending onto the property from the LIRR Oyster Bay Line. What appears to be a mix of commercial and residential structures exist both directly adjacent to and across from the site to the west, north and east. The LIRR tracks are visible to the south. Areas surrounding the site are well developed with residential and commercial structures. 2nd Street borders the Site to the north.

1943 Aerial Photograph (scale: 1" = 500')

The 1943 EDR aerial is of poor quality however it indicates no significant changes have occurred to the Site since the 1938 EDR aerial photograph. No other significant changes have occurred to the surrounding areas since the 1938 EDR aerial photograph.

1947 Aerial Photograph (scale: 1" = 500')

The 1947 EDR aerial indicates no significant changes have occurred to the Site since the 1943 EDR aerial photograph. No other significant changes have occurred to the surrounding areas since the 1943 EDR aerial photograph.

1951 Aerial Photograph (scale: 1" = 500')

The 1951 EDR aerial indicates no significant changes have occurred to the Site since the 1951 EDR aerial photograph. No other significant changes have occurred to the surrounding areas since the 1951 EDR aerial photograph.

1953 Aerial Photograph (scale: 1" = 500')

The 1953 EDR aerial indicates that the buildings on the western side of the Site were expanded. No other significant changes have occurred to the surrounding areas since the 1951 EDR aerial photograph.

1962 Aerial Photograph (scale: 1" = 500')

The 1962 EDR aerial indicates no significant changes have occurred to the Site since the 1953 EDR aerial photograph. Adjacent to the Site to the east, the prior small structures have been replaced with a large structure, which appears to be commercial. In the surrounding area to the northeast of the site, an open field area with trees was cleared and replaced with a baseball field. No other significant changes have occurred to the surrounding areas since the 1953 EDR aerial photograph.

1966 Aerial Photograph (scale: 1" = 500')

The 1966 EDR aerial indicates no significant changes have occurred to the Site since the 1962 EDR aerial photograph. In the surrounding area to the northeast of the site an additional baseball field was added. No other significant changes have occurred to the surrounding areas since the 1962 EDR aerial photograph.

1976 Aerial Photograph (scale: 1" = 500')

The 1976 EDR aerial indicates no significant changes have occurred to the Site since the 1966 EDR aerial photograph. No other significant changes have occurred to the surrounding areas since the 1966 EDR aerial photograph.

1980 Aerial Photograph (scale: 1" = 500')

The 1980 EDR aerial indicates no significant changes have occurred to the Site since the 1976 EDR aerial photograph. No other significant changes have occurred to the surrounding areas since the 1976 EDR aerial photograph

1984 Aerial Photograph (scale: 1" = 500')

The 1984 EDR aerial, while blurry, indicates no significant changes have occurred to the Site since the 1980 EDR aerial photograph. In the surrounding area one block north east of the Site, a large rectangular structure was constructed in what was previously a parking lot. No other significant changes have occurred to the surrounding areas since the 1980 EDR aerial photograph

1994 Aerial Photograph (scale: 1" = 500')

The 1994 EDR aerial, while blurry, indicates no significant changes have occurred to the Site since the 1984 EDR aerial photograph. No other significant changes have occurred to the surrounding areas since the 1984 EDR aerial photograph.

2006 Aerial Photograph (scale: 1" = 500')

The 2006 aerial photograph indicates that all buildings on the Site have been demolished and the Site is currently a vacant dirt lot. No other significant changes have occurred to the Site or surrounding area since the 1994 aerial photograph.

2009 Aerial Photograph (scale: 1" = 500')

The 2009 aerial photograph indicates that the site is now an asphalt parking lot. No other significant changes have occurred to the Site or surrounding area since the 2006 aerial photograph.

2011 Aerial Photograph (scale: 1" = 500')

The 2011 EDR aerial indicates no significant changes have occurred to the Site since the 2009 EDR aerial photograph. No other significant changes have occurred to the surrounding areas since the 2009 EDR aerial photograph.

4.3.3 Historical Topographic Maps

An inquiry was made with EDR to obtain historical USGS topographic maps for the Site. Historical topographic maps were reviewed for the following quadrants and years: Hempstead and Oyster Bay, New York 1897, 1898, 1899 and 1900, Hempstead New York in 1903 and Hicksville, Sea Cliff, Freeport and Lynbrook Park, New York in 1974, 1954, 1955, 1967, 1968, 1696 and 2013. No significant changes in elevation were noted. Copies of the historical topographic maps can be found in Appendix G.

1897 Hempstead and Oyster Bay Quadrant Topographic Map (1:62,500)

Based on a review of the 1897 Hempstead and Oyster Bay Park quadrant topographic map, the Site is unidentified and may be undeveloped. The land immediately surrounding the Site may also be undeveloped with no noted changes in elevation. The surrounding area consists of the present-day roads and the LIRR Main Line to the south of the Site and the LIRR Oyster Bay railroad line to the east of the Site.

1898 Hempstead and Oyster Bay Quadrant Topographic Map (1:62,500)

Based on a review of 1898 Hempstead and Oyster Bay quadrant topographic map, no significant changes in development or elevation have occurred to the Site or the surrounding area since the 1897 Hempstead and Oyster Bay quadrant topographic map.

1899, 1900 Hempstead and Oyster Bay Quadrant Topographic Map (1:62,500)

Based on a review of the 1899, 1900 Hempstead and Oyster Bay quadrant topographic map, no significant changes in development or elevation have occurred to the Site or the surrounding area since the 1898 Hempstead and Oyster Bay quadrant topographic map.

1903 Hempstead Quadrant Topographic Map (1:62,500)

Based on a review of the 1903 Hempstead quadrant topographic map, no significant changes in development or elevation have occurred to the Site or the surrounding area since the 1899, 1900 Hempstead and Oyster Bay quadrant topographic map.

1947 Hicksville, Sea Cliff, Freeport and Lynbrook Quadrant Topographic Map (1: 24,000)

Based on a review of the 1947 *Hicksville, Sea Cliff, Freeport and Lynbrook* quadrant topographic map, the Site is now developed with several structures on site. The areas surrounding the Site are also developed.

1954, 1955 Hicksville, Sea Cliff, Freeport and Lynbrook Park Quadrant Topographic Map (1:24,000)

Based on a review of the 1954, 1955 Hicksville, Sea Cliff, Freeport and Lynbrook quadrant topographic map, the site and surrounding areas have been shaded red, indicating significant development, replacing individual building

detail. No other significant changes are apparent since the 1947 Hicksville, Sea Cliff, Freeport and Lynbrook Quadrant Topographic Map.

1967, 1968, 1969 Hicksville, Sea Cliff, Freeport and Lynbrook Quadrant Topographic Map (1:24,000)

Based on a review of the 1967, 1968, 1969 Hicksville, Sea Cliff, Freeport and Lynbrook quadrant topographic map, the internals of the contour lines have become smaller to allow for a better interpretation of the topography. The contour lines on the map indicate a slight change in elevation around the Site. No other significant changes in development or elevation have occurred to the Site since the 1954, 1955 Hicksville, Sea Cliff, Freeport and Lynbrook quadrant topographic map.

2013 Hicksville, Sea Cliff, Freeport and Lynbrook Quadrant Topographic Map (1:24,000)

Based on a review of the 2013 Hicksville, Sea Cliff, Freeport and Lynbrook quadrant topographic map, no significant changes in development or elevation have occurred to the Site since the 1967, 1968, 1969 Hicksville, Sea Cliff, Freeport and Lynbrook quadrant topographic map. Several disturbed areas are noted to the southwest of the Site. Urban development is no longer shown on the 2013 map, with only elevation, street and municipality names, and important landmarks shown.

4.3.4 City Directory

City directories serve as a historical resource by listing the name of a resident or the name and type of a business at a particular address. A search was made by EDR for historical city directories of the Site and immediately adjacent properties. As a result of the search, the city directories were reviewed for the years 1972, 1977, 1982, 1992, 1995, 1999, 2003, 2008, and 2013. Sources of the reviewed city directories include Cole Information Services. A copy of the City Directory Abstract Report is included in Appendix H.

Based on a review of the City Directory Abstract, the Site 161-163 2nd Street, Mineola, NY was identified in the EDR City Directory Abstract as further described below:

Use	Year(s) Listed
Wilson Sinclair Co.	1972, 1977
Mid Island Frozen Food Co. /Mid Island Whole Fruit	1972, 1977, 1982, 1992, 1995, 2008
Kozy Shack	1982, 1987, 1992, 2003
New York Ravioli and Pasta Company	2003

Adjoining properties on adjacent streets were further researched in the city directory. The only adjoining property identified in the City Directory was the property located at 165 2nd Street. This property was identified as commercial and residential as described below:

Use	Year(s) Listed
165 2nd Street	
Mineola Gun Shop	1972
Mineola Ordinance	1977, 1982
Emily Beauty Salon	1992, 1995
Margaret Beauty Salon	1999
Terra Latina	2008, 2013
Maranatha Construction Inc.	2013
164 2nd Street	
Treasure Island Food	1972, 1982, 1987, 1992, 1995,
Christopher Schmidt	1977
Emmet Properties Corp.	2003, 2008
2nd Street Plumbing and Heating	2013
162 2nd Street	
Wilson Sinclair	1972
J K Barnett	1977, 1982, 1987, 1992, 2008, 2013
Cristobal Fuentes	2003

4.4 Tier 1 Vapor Encroachment Screening

Matrix conducted a VES in general accordance with the ASTM Designation E2600-15 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*.

The objective of the VES is to conduct an initial screening to determine whether current or historical practices associated with the Site or nearby properties have the potential to have created a Vapor Encroachment Condition (VEC). The term VEC is defined by ASTM Standard 2600-15 "as the presence or likely presence of chemicals of concern (COC) vapors in the subsurface of the Site caused by the release of vapors from contaminated soil and/or groundwater on or near the Site as identified by Tier 1 or Tier 2 procedures."

The Tier 1 screening process includes the following: (1) a search distance test to determine if there are known or suspect contaminated properties in the AOC; and (2) a COC test to determine for those known or suspect contaminated properties within the AOC whether or not a COC is likely to be present.

Matrix reviewed standard environmental record sources typically collected as part of the ASTM E1527-13 Phase I to determine if there are known or suspected sources of contamination within the AOC. The AOC is determined utilizing the approximate minimum search distances as defined by ASTM E2600-15. The approximate minimum search distance is based upon the type of COC; petroleum hydrocarbons or non-petroleum hydrocarbons. Generally, the approximate minimum search distance with regards to the AOC is one-third mile for non-petroleum hydrocarbons and one-tenth mile for petroleum hydrocarbons.

There are four possible conclusions of the Tier 1 screening process which include: (1) a VEC exists; (2) a VEC likely exists; (3) a VEC cannot be ruled out; or (4) a VEC can be ruled out because a VEC does not or is not likely to exist. If a VEC does not exist or is unlikely to exist, then the VES process is considered complete in accordance with ASTM E2600-15. If a VEC cannot be ruled out in the Tier 1 screen, then further action may be recommended (i.e., Tier 2). A Tier 2 screening is excluded from the scope of the Tier 1 process.

4.4.1 Standard Environmental Record Sources

A VES was completed for the Site and surrounding area through a search by EDR dated April 5, 2017. The VES utilizes standard environmental record sources to determine if there are known or suspected sources of contamination within the AOC. The search was conducted in general accordance with ASTM E 2600-15 standards.

Based on the findings of the VES Worksheet, VECs could not be ruled out for the Site based on the records reviewed. The Site was identified on one of the databases, and the remaining properties were identified within the minimum search distance where VECs could not be ruled out and the potential to present VECs to the Site. A copy of the Vapor Encroachment Screen is included in Appendix I.

Site Name	Address	Elevation	Gradient	Databases
Mid Island Wholesale	163 2nd Street	Target Property	Crossgradient	NY SPILLS
516 E Adams	109-115 N. Main Street	Equal	Crossgradient	LTANKS
Post Office	North Main Street	Higher	Upgradient	LTANKS
Boulevard Towers	190 First Street	Higher	Upgradient	NY MANIFEST, SPILLS, TANKS, LTANKS,
Sumner's Cleaner	100 Mineola Blvd.	Higher	Upgradient	Drycleaners, Historical Drycleaners

Apartments	225 1st Street	Higher	Upgradient	LTANKS

4.5 User Provided Information

4.5.1 Title Records

Chain-of-Title records were not provided for review by Matrix. Based on information obtained from *http://lrv.nassaucountyny.gov/*, 161 2nd Street (Block 426, Lots 7, 113, 212 & 213) is owned by The People of the State of New York. No other chain-of-title records were made available by the User.

4.5.2 Environmental Liens or Activity and Use Limitations

No records regarding environmental liens or activity and use limitations were provided by the User for Matrix to review.

4.5.3 Specialized Knowledge

Specialized knowledge of RECs or potential RECs in connection with the Site has been included in Section 5.

4.5.4 Commonly Known or Reasonably Ascertainable Information

Commonly known or reasonably ascertainable information has been provided in the reference section (Section 10).

4.5.5 Valuation Reduction for Environmental Issues

No information regarding the valuation reduction for environmental issues was provided by the owner.

4.5.6 Owner, Property Manager, and Occupant Information

The Site is currently owned by the People of the State of New York.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

A reconnaissance of the Site and surrounding area was performed on March 13, 2017 by Christiana Seiffer of Matrix. The property is a parking lot and a property representative was not present during the site reconnaissance. Photographs of significant features identified during the Site reconnaissance are included in Appendix B.

5.2 General Site Setting

The Site is located at 161-163 2nd Street and occupies Block 426, Lots 7, 113, 212 and 212 in the Village of Mineola, Town of North Hempstead, Nassau County, New York. The Site consists of four parcels which are improved with an asphalt-paved parking lot.

5.3 Exterior Observations

5.3.1 Hazardous Substances/Wastes

During the Site reconnaissance, no hazardous waste was observed on site. No cracks were observed in the asphalt and no staining was noted.

5.3.2 Bulk Storage Tanks and Appurtenances

Aboveground Tanks and Associated Piping

No evidence of ASTs and associated piping was observed on exterior portions of the Site during the Site reconnaissance.

Underground Tanks and Associated Piping

No evidence of USTs and associated piping was observed on exterior portions of the Site during the Site reconnaissance.

Storage Pads and Areas Including Drum/Waste Storage

No evidence of storage pads and areas including drum/waste storage was observed on exterior portions of the Site during the Site reconnaissance.

Rail, Truck, or Other Loading and Unloading Areas

No evidence of rail, truck, or other loading and unloading areas was observed on exterior portions of the Site during the Site reconnaissance.

Pump Stations, Sumps, and Pits

No pump stations, sumps, or pits were observed on exterior portions of the Site during the Site reconnaissance.

Surface Lagoons and Impoundments

No surface lagoons or impoundments were observed on exterior portions of the Site during the Site reconnaissance.

5.3.3 Drainage Systems and Areas

Surface Water Bodies

No surface water bodies were observed on exterior portions of the Site during the Site reconnaissance.

Sanitary Sewer Collection Systems

No sanitary sewer collection systems were observed on exterior portions of the Site during the Site reconnaissance.

Stormwater Collection Systems

Five stormwater catch basins were observed throughout the Site.

Septic Systems and Leach Fields

No septic systems or leach fields were observed on exterior portions of the Site during the Site reconnaissance.

Seepage Pits and Dry Wells

No seepage pits or dry wells were observed on exterior portions of the Site during the Site reconnaissance.

Storm Water Detention Ponds and Fire Water Ponds

Six storm water collections sewer gates were observed on the property. No evidence of staining or a release was identified in the vicinity of the storm water collection sewer grates.

Drainage Swales and Culverts

No drainage swales or culverts were observed on exterior portions of the Site during the Site reconnaissance.

5.3.4 Discharge and Disposal Areas

Solid Waste Generation/Disposal and Dumpsters

No evidence of solid waste generation/disposal and dumpsters were observed on exterior portions of the Site during the Site reconnaissance.

Sanitary/Process Waste Generation/Discharge Points

No evidence of sanitary/process waste generation or discharge points was observed on exterior portions of the Site during the Site reconnaissance.

Underground Piping, Including Industrial Process Sewers

No evidence of underground piping, including industrial process sewers were observed on exterior portions of the Site during the Site reconnaissance.

Waste Piles

No evidence of waste piles was observed on exterior portions of the Site during the Site reconnaissance.

Landfills or Landfarms

Based on a review of the State's Solid Waste Facility Directory and the Site reconnaissance, no landfills or landfarms are located in close proximity to the Site.

Open Pipe Discharges

No open pipe discharges were observed on exterior portions of the Site during the Site reconnaissance.

5.3.5 Transformers

One pad-mounted transformer was observed at the southwestern corner of the eastern adjacent property, behind the building but north of the LIRR. There was no visible staining and no indication of any leaks and no indication of the contents. Pole-mounted transformers were observed at the northern entrance to the site. There was no visible staining and no indication of any leaks and no indication of the contents.

Matrix contacted LIPA, the owner of the transformers, regarding the contents of the transformers and received the following response:

"No analytical data is available for these transformers. However, all distribution transformers owned by LIPA were specified at the time of purchase from the manufacturer to contain a dielectric fluid consisting of mineral oil,

not PCBs. As a result, LIPA's in-service transformers typically are expected to either contain no detectable PCBs or low levels of PCBs (typically <0.01%). Even though mineral oil was specified, low levels of PCBs could nonetheless be present because manufacturers sometimes manufactured mineral oil transformers in close proximity to transformers manufactured to specifically contain PCBs. LIPA does not routinely conduct sampling and analysis of transformers for PCBs as that would require the incurrence of an outage and costs that would have to be passed on to the customer. Instead, units are tested when they retired from active service."

5.4 Interior Observations

5.4.1 Hazardous Substances/Wastes

No evidence of hazardous substances/wastes was observed on the interior portions of the Site during the Site reconnaissance.

5.4.2 Bulk Storage Tanks and Appurtenances

Aboveground Tanks and Associated Piping

No ASTs and associated piping were observed on interior portions of the building during the Site reconnaissance.

Underground Tanks and Associated Piping

No USTs and associated piping were observed on interior portions of the building during the Site reconnaissance.

Storage Pads and Areas Including Drum/Waste Storage

No evidence of storage pads and areas including drum/waste storage was observed on interior portions of the Site during the Site reconnaissance.

Pump Stations, Sumps, and Pits

No pump stations, sumps, or pits were observed on interior portions of the Site during the Site reconnaissance.

Chemical Storage Cabinets or Closets

No chemical storage cabinets or closets were observed on interior portions of the Site during the Site reconnaissance.

5.4.3 Drainage Systems and Areas

Floor Drains or Trenches and Piping

No floor drains or trenches and piping were observed on interior portions of the Site during the Site reconnaissance.

Process Area Sinks and Piping

No process area sinks or piping were observed on interior portions of the Site during the Site reconnaissance.

Sanitary Sewer Collection Systems

No sanitary sewer collection systems were observed on interior portions of the building during the Site reconnaissance.

Stormwater Sewer Collection Systems

Stormwater on-Site is collected in catch basins which lead to the municipal storm sewer along 2nd Street.

Seepage Pits and Dry Wells

No seepage pits or dry wells were observed on interior portions of the building during the Site reconnaissance.

5.4.4 Discharge and Disposal Areas

Solid Waste Generation/Disposal and Dumpsters

No solid waste generation/disposal and dumpsters were observed on interior portions of the building during the Site reconnaissance.

Waste Piles

No waste piles were observed on interior portions of the Site during the Site reconnaissance.

6.0 INTERVIEWS

6.1 Interview with Owner

No additional personnel were present on the Site during the Site reconnaissance. A user questionnaire was provided to the client and information provided has been included throughout this report. A copy of the completed Prospective Landowner and/or User Questionnaire is included in Appendix J.

6.2 Interview with Site Manager

As indicated above, the property manager was not present during the Site reconnaissance. Information obtained from the property manager over the phone is included throughout Section 6.

6.3 Interview with Occupants

The Site is currently unoccupied by any tenants or buildings. No interview was conducted.

6.4 Interview with Local Government Officials

As indicated above (Section 5.2), Matrix contacted the USEPA, NJDEP, Nassau County Clerk, Nassau County Fire Department and the Mineola Township Municipal Clerk regarding environmental files for the Site. Information request letters and responses associated with these agencies are included in Appendix C. Should relevant information be obtained subsequent to the publication of this report, an amendment will be issued.

6.5 Interview with Others

A Prospective Landowner and/or User Questionnaire was provided to the client for completion. Responses provided on the Prospective Landowner and/or User Questionnaire have been included throughout this report. A copy of the Prospective Landowner and/or User Questionnaire is provided in Appendix J.

7.0 FINDINGS & OPINIONS

Based on the site reconnaissance, database review, historical review, review of available records, and interviews with persons familiar with the Site and surrounding area, Matrix is providing findings and opinions including RECs, historical recognized environmental conditions (HRECs), *de minimis* conditions, and data gaps.

Recognized Environmental Conditions

- The following RECs were identified that may pose an environmental concern as a result of past uses of the Site and neighboring properties.
    - The Site, under the names NYSDOT –Former Kozy Shack (161 2nd Street) and NYSDOT – Former Mineola Realty (163 2nd Street) was listed twice as a RCRA NonGen/NLR RCRA facility. The database listing, from June 2002, did not provide information on the materials handled on-Site, although it is noted that hazardous materials were not generated on-Site. The former handling of hazardous materials on-Site is considered a REC.
    - There are indications of potential petroleum storage on-Site. Under the name Mid-Island Fruit & Produce, 163 2nd Street, the Site was listed on the NY UST database with USTs, the sizes of the USTs are not noted; however, the USTs are reported as being installed on 1/1/1978 and 2/22/1961 with a last test date of 3/26/1996 for both. On the 1925 through 1970 Sanborn maps, a gasoline tank is shown just east of the garage on-Site. The former storage of potential petroleum products in a UST on-Site is considered a REC.
    - Vapor Encroachment Condition (VEC): A Tier 1 Vapor Encroachment Screen (VES) was completed by Matrix using EDR's Vapor Encroachment Screen Worksheet. Based on available information, a potential VEC was identified at the Site. Please see Section 4.5 above for further discussion on the Tier 1 VES.
    - Dry Cleaner/Historic Dry Cleaners – Sumners Cleaners, 100 Mineola Blvd, is listed on the DRYCLEANERS and HIST DRYCLEANERS. Based on the proximity to the Site (0.101 miles to the northwest) across 2nd Street and the presumed groundwater flow direction, there is potential impact to the site from Sumners Cleaners should a release have occurred.
    - The property directly adjacent to the east of the Site was used as a coal yard, identified as the Birdsall Coal Co. on the 1917 through 1950 Sanborn maps.
    - Potential petroleum storage is noted at three facilities directly across 2nd Street, in the presumed upgradient groundwater flow direction. One automobile garage located at 162 2nd Street had a

gasoline tank, as shown on the Sanborn map in 1925. A dwelling at 154 2nd Street was shown with two gasoline tanks in 1937. The third, a property to the northeast of the Site, is shown as a printing facility with three gasoline tanks in 1937 through 1963 Sanborn maps. The potential for leaks to have occurred from these USTs in proximity to the Site is considered a REC.

Controlled RECs

- Controlled Recognized Environmental Conditions (CRECs) are recognized environmental conditions resulting from a past release of hazardous substances or petroleum products that have been addressed to the satisfaction of the applicable regulatory authority with hazardous substance or petroleum products allowed to remain in place subject to the implementation of required controls. No CRECs have been identified for the Site.

Historical RECs

- Historical Recognized Environmental Conditions (HRECs) are recognized environmental conditions resulting from a past release of hazardous substances or petroleum products that have been addressed to the satisfaction of the applicable regulatory authority, without subjecting the property to any required controls. Two HRECs were identified in connection with the Site.
    - At 163 2nd Street, Mid Island Wholesale is listed as a NY SPILLS site under Spill number 9516021, opened on March 14, 1996. An unknown quantity of #2 fuel oil was spilled as a result of a leak from the fuel line to the furnace. The spill occurred on concrete and was cleaned with Speedi Dri. The status of the spill is closed as of May 21, 1997.
    - At 161 2nd Street, the Site is listed as Lilco with Spill #8701685 assigned on May 30, 1987. The spill of 2 gallons of mineral oil was closed on June 4, 1987.

Other Findings

The term “other finding” is not defined by ASTM; rather, Matrix uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard. Although not a considered REC based on currently available information, Matrix identified the following other findings based on review of the database reports. Sites within 0.1 miles of the Site and at a higher elevation that were determined to have the potential to impact the Site should a spill have occurred were deemed other findings. These facilities were not identified on any other databases and there are no records of spills or other known sources of contamination from these facilities.

- ABC Car Service is located adjacent to the Site, to the west, along 2nd Street and was listed as being a historic auto station in 1999 and 2000. No other information is provided in the listing. Based on its proximity to the Site, should a spill have occurred in connection with this facility, there is potential for it to have impacted the Site.

De Minimis Conditions

- No *de minimis* conditions were observed or identified through interviews or records review of current or historical uses of the Site and adjoining properties.

Data Gaps

- To date, a response to the FOIA and FOIL requests submitted to the USEPA, NYSDEC, Nassau County Clerk and Fire Department and Mineola Municipal Clerk has not been received. A response from this agency will be forwarded upon receipt with recommendations, if necessary.
- In addition, a limitation was encountered in determining the historical use of the subject property. The earliest source of historical information reasonably ascertainable within the time frame of this report from which usage could be determined was a Sanborn Map from 1908. The Sanborn Map shows domestic residence, a storage building, and an unknown structure. Therefore, the ASTM E1527 requirement to determine all obvious uses of the property from the present back to the property's first obvious developed use, or back to 1940, whichever is earlier, could not be achieved. However, it is unlikely that there had been significant prior development; therefore, this data failure is not expected to impact the results of this assessment.

8.0 DEVIATIONS

The Phase I ESA was performed in accordance with the ASTM 1527-13 Standards as well as the detailed scope of services presented in Section 2.2 of this report.

9.0 ADDITIONAL SERVICES

No additional services were performed beyond the detailed scope presented in Section 2.2 of this report.

11.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Matrix declares, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and preformed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Brian Crespi
Project Manager

Mindy Chassin Horowitz
Program Director

12.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

CHRISTIANA SEIFFER
Environmental Scientist
Ms. Seiffer has 3 years of environmental and ecological experience in the following areas: environmental screenings, site investigations, soil/sediment/surface/groundwater sample collection, benthic surveys, macroinvertebrate assessment studies, toxicity studies, habitat assessments, ground and surface water sampling, aquatic species, and hydrophytic plant species identification. Ms. Seiffer has conducted several environmental site investigations, including planning and coordination of soil, groundwater and sediment sampling, and has done project oversight for environmental remediation projects.

BRIAN CRESPI
Project Manager
Mr. Crespi has over eight years of experience in the environmental consulting field performing initial and remedial site assessments, hazardous materials assessments, construction oversight, health and safety monitoring, remedial design, and landfill gas evaluations. Mr. Crespi's areas of expertise include brownfield cleanup and redevelopment; investigation and remediation of sites with potential hazardous material contamination; litigation support for cost recovery and insurance matters; development of remedial cost estimates; and vapor intrusion assessments and remediation. Mr. Crespi has extensive experience conducting investigations for clients in both the public and private sectors, including projects focusing on railroads, landfills, industrial and commercial facilities, as well as impacts on neighboring or proposed residential development. Mr. Crespi has developed and directed the implementation of numerous soil, groundwater and vapor intrusion sampling programs for remedial investigations at industrial facilities being evaluated under the New York Spill Response Program and SRRA and ISRA in New Jersey. His environmental science and engineering background, along with varied experience in New York and New Jersey, provide the foundation to develop and implement investigation and remediation plans and develop the findings into reports for various state and federal regulatory programs. Mr. Crespi is certified through the NYC Mayor's Office of Environmental Remediation, as an OER Certified Brownfield Professional, to efficiently achieve brownfield cleanup and redevelopment on New York City Brownfield sites.

MINDY CHASSIN HOROWITZ
Project Director
Ms. Horowitz has over 20 years of experience in the environmental consulting field performing hazardous materials assessments, waterfront permitting, construction oversight and remedial design. Ms. Horowitz's areas of expertise include brownfield cleanup and redevelopment; investigation and remediation of New York City e-designation sites (sites with a zoning map amendment) with potential hazardous material contamination; stormwater pollution prevention; environmental due diligence of industrial, commercial, residential and mixed-use facilities; litigation support for cost recovery and insurance matters; and development of remedial cost estimates. She has extensive experience managing and conducting hydrogeologic investigations for clients in both the public and private sectors, including projects focusing on rail roads, highways, airports and industrial and commercial facilities. Ms. Horowitz has developed and directed the implementation of numerous soil, groundwater and sediment sampling programs for remedial investigations at industrial facilities being evaluated under ISRA. Her combined hydrogeological and geo-environmental engineering background, along with her varied experience in New York and New Jersey, enable her to compile and interpret analytical data to develop clear and technically defensible conceptual site models and incorporate these findings into reports for various state and federal regulatory programs. Mindy is certified through the NYC Mayor's Office of Environmental Remediation, as an OER Certified Brownfield Professional, to efficiently achieve brownfield cleanup and redevelopment on New York City Brownfield sites.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal Delisted NPL site list

Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

A review of the Delisted NPL list, as provided by EDR, and dated 12/05/2016 has revealed that there is 1 Delisted NPL site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

WINTHROP UNIVERSITY	***259 1ST ST***	***W 1/8 - 1/4 (0.225 mi.)***	***Q106***	***258***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/14/2016 has revealed that there are 7 NY SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 01/04/2017 has revealed that there is 1 NY SWF/LF site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
GARVIES POINT TRANSF	39 WILLIS AVE	SE 0 - 1/8 (0.103 mi.)	E55	104

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/06/2017 has revealed that there are 47 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 18 NY UST sites within approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, and dated 11/14/2016 has revealed that there is 1 NY VCP site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 02/06/2017 has revealed that there are 27 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/12/2016 has revealed that there are 21 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
LILCO GARDEN CITY	HILTON AVENUE AND 11	S 1/2 - 1 (0.789 mi.)	145	424

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MINEOLA G16 (LIRR) (Continued) **S106122271**

Updated By:	GTBOBERS
Site Description:	Site Location: The Long Island Rail Road (LIRR) Mineola substation site is located in a urban portion of Nassau County, NY. It is located near Front Street and Main Street in Mineola. Site Features: The main site features are the two-story brick building, transformer yard, and parking area. Current Zoning and Land Use: The site is currently zoned for transportation and used by the LIRR as a rectifying station to supply power to the rail road. The immediate areas surrounding the site are used for a mix of commercial and industrial purposes. Past Use of the Site: The site was previously used by the LIRR to convert AC to DC power to power the rail road. The historic source of contamination is mercury from rectifiers that have since been replaced. A site assessment was conducted by the LIRR in August 1999, the assessment identified mercury contamination. The LIRR entered this site into the Voluntary Cleanup Program (VCP) in 2004. Site Geology and Hydrogeology: The soil at the site consists of primarily sand to a depth of several hundred feet. Bedrock is encountered at greater depths. The groundwater is approximately 40 feet below grade.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminant of concern was mercury.
Health Problem:	A fence limits access to the site so the public is unlikely to come in contact with surface contaminants, if present. The public is not likely to be drinking contaminated groundwater since public water serves the area and there are no known users of private well water nearby.

DEC Memo:	"10/08/12 @16:10 t/c to notifier; by S.Witt 275 AST in the basement released some oil, Petro plumber stopped the leak, Milro on the way with temp tank. (VP) 10/09/12 1105 Hrs: Checked internet for Peykar's address. DR 10/24/12 0915 Hrs: DOT NAPOLI (MILRO ASSOCIATES) left message. DR 10/24/12 0930 Hrs: Left message for Napoli. DR 10/24/12 0940 Hrs (A): Napoli called- THE OIL IMPACTED TWO ROOMS. The impacted area in one room was approximately 10ft x 7ft, and in the other room approximately 11ft x 11ft. 10/24/12 0940 Hrs (B): They found cracks in the floor, so they performed SIX borings through the floor to check for subsurface contamination. They checked the soil at 1.ft deep and 3ft deep, and the PID readings ranged from 7ppm to 168ppm. 10/24/12 0940 Hrs (C): DEC informed her the file would be updated and given to a supervisor for review, and directed her to call back later this week to determine whether an inspector had been assigned to the case. DR 01/24/13 1515 Hrs (A): Napoli called to determine whether an inspector had been assigned to the case- informed her the case was still unassigned. 01/24/13 1515 Hrs (B): She said they have been hired to perform the cleanup. They will be excavating TWO area, one approximately 11ft x 11ft and the other approximately 7ft x 10ft; she suspects the DEPTH will be 3-4ft. 01/24/13 1515 Hrs (C): DEC informed her the file would be updated and given to a supervisor for review, and directed her to call back next week to determine whether an inspector had been assigned to the case. DR 1/24/13: FILE REASSIGNED"
Remarks:	"Oil was leaking from a crack in the tank to the concrete floor. Cleanup in progress by handyman from realty company. Floor drain on site, unknown if oil entered drain."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"07/30/09 1345 Hrs (A): Shawn Grand (NCHD) called to report that contaminated soil had been found during the routine removal of 1 4,000gal fuel oil tank. 07/30/09 1345 Hrs (B): He asked whether the spill had been reported. DEC INFORMED HIM IT HAD NOT BEEN REPORTED, AND THAT DEC WOULD CALL AARCO TO DETERMINE WHY. 07/30/09 1345 Hrs (C): Grand said approximately 4cy of soil had been removed, and he was satisfied with the cleanup. DR 07/31/09 0940 Hrs: DEC called STEVE PLOFKER (AARCO)- provided him with the Spill Number. DR 07/31/09 0950 Hrs: DEC called Grand- updated him, and requested a copy of his report. DR 07/31/09 1300 Hrs (A): Received NCHD's report- IT SAID THE CONTAMINATED SOIL WAS DUE TO SOME PRODUCT BEING SPILLED DURING THE REMOVAL OF THE TANK. 07/31/09 1300 Hrs (B): NEITHER NCHD NOR AARCO HAD MENTIONED THIS TO DEC. DR 08/03/09: Received hardcopy of NCHD's report. DR"
Remarks:	"SHAWN GRAND CALLED TO REPORT THAT CONTAMINATED SOIL HAD BEEN FOUND DURING THE ROUTINE REMOVAL OF 1 4,000GAL FUEL OIL TANK, AND TO SEE WHETHER THE SPILL HAD BEEN REPORTED. DEC INFORMED HIM IT HAD NOT BEEN REPORTED. GRAND SAID THAT APPROXIMATELY 4CY OF SOIL HAD BEEN REMOVED, AND HE WAS SATISFIED WITH THE CLEANUP. (DR)"

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste name: 2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-, 2-OXIDE (OR) CYCLOPHOSPHAMIDE

. Waste code: U059
. Waste name: 5,12-NAPHTHACENEDIONE, 8-ACETYL-10-[(3-AMINO-2,3,6-TRIDEOXY)-ALPHA-L-LYXO-HEXOPYRANOSYL)OXY]-,8,9,10-TETRAHYDRO-6,8,11-TRIHYDROXY-1-METHOXY-, (8S-CIS)- (OR) DAUNOMYCIN

. Waste code: U150
. Waste name: L-PHENYLALANINE, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) MELPHALAN

. Waste code: U206
. Waste name: D-GLUCOSE, 2-DEOXY-2-[[(METHYLNITROSOAMINO)-CARBONYL]AMINO]- (OR) GLUCOPYRANOSE, 2-DEOXY-2-(3-METHYL-3-NITROSOUREIDO)-,D- (OR) STREPTOZOTOCIN

Facility Has Received Notices of Violations:
Regulation violated: Not reported
Area of violation: TSD IS-Preparedness and Prevention
Date violation determined: 09/09/2008
Date achieved compliance: 11/04/2008
Violation lead agency: State
Enforcement action: WRITTEN INFORMAL
Enforcement action date: 09/23/2008
Enf. disposition status: Action Satisfied (Case Closed)
Enf. disp. status date: 11/04/2008
Enforcement lead agency: State
Proposed penalty amount: Not reported
Final penalty amount: Not reported
Paid penalty amount: Not reported

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated

ONCOGENE SCIENCE INC (Continued) **1000332483**

Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Registry ID: 110009469627

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"01/23/14 1140 Hrs: Left message for Lotito. DR 01/23/14 1320 Hrs (A): Lotito called- he said they suspect the petrometer is the cause of the test failure, 'and if this is the tank they believe it is, it was installed in 1971 and will probably be removed.' 01/23/14 1320 Hrs (B): DEC directed him to contact HC with any questions. DR 2/7/14 FILE REASSIGNED Approx. 60 cu. yards of #2 oil contaminated soil has been removed along with 1,000 UST removal. Excavation stopped at ~15' below the grade due to structural concerns of nearby building. ~100 ppp by PID meter soil sample on the bottom. Sub-surface investigation requested. 02-07-14 @8:00 Geo Probe rig mobilized on site. Two bores on the previous location of the tank made. PID meter field screening used. vertical spreading of petroleum undetected at ~27' below the grade in both bores. Ground water level has been reached at ~45' b.g. and appeared to be not affected. It has been assumed that minimal petroleum related contaminants left on the bottom of the excavation will be naturally attenuated before any impact to the ground water. Cleanup has been completed, no further action required.(VP)"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Record Add: 07/14/2004
Record Upd: 09/16/2015
Updated By: DJEVANS
Site Description: Site Location: The site is located in an urban/suburban portion of Nassau County in Mineola. The site is located at 255 East Second Street on approximately 4.5 acres. Site Features: The main site features include several interconnected one-story buildings and asphalt parking areas. The site is adjacent to the Long Island Railroad and a residential neighborhood to the south. To the north, east, and west are other commercial and industrial properties. Current Zoning/ Use(s): The site is currently used as machine shop. It has been in use as a machine shop since 1947.Historical Use(s): Prior operations that primarily led to the contamination include improper storage of drums of waste metal shavings. A remedial investigation was completed in 1996. Supplemental RI work was completed in 2003. An IRM to remove contaminated soil was also completed in 2003. A feasibility study was completed in June 2005. The Record of Decision was issued in March 2006. The soil removal along and under the LIRR was completed during the track shutdown during the weekend of August 24-26, 2007. A soil vapor extraction system has been operating since January 2008. Site Geology and Hydrogeology: The site is situated on unconsolidated coastal plain deposits of the Cretaceous to Quaternary age. Glacial outwash soil deposits known as the Upper Glacial Aquifer of Long Island underlie the area in which the site is located ot a thickness of apporimately 50 feet below ground surface.
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs) including tetrachloroethene (PCE, or perc), 1,1,1-trichloroethane (TCA), trichloroethene (TCE) and polychlorinated bi-phenyls (PCBs). Residual contamination in the soil and groundwater is being managed under a Site Management Plan.
Health Problem: Off-site contamination of PCB's, VOC's and heavy metals, are restricted to the Long Island Railroad (LIRR) behind the property; accessiblity to this area appears to be limited. Therefore, public exposures to off-site contamination in this area is not likely. A soil vapor extraction system has been proposed to remediate existing on site soil gas contamination. NYSDOH and NYSDEC will evaluate the need to conduct additional investigations to determine the potential for soil vapor intrusion into structures on or near the site.

Substance: TRICHLOROETHYLENE (TCE)
CAS #: 79-01-6
Pathway: NO PATHWAY INDICATED
Scoring: 1

Summary Details:

Conditions at Proposal October 22, 1999): The Jackson Steel site is an inactive roll form metal shapes manufacturing facility located in Mineola/North Hempstead, Nassau County, New York. It is not known when Jackson Steel began operating; however, they submitted a form/application to the Nassau County Health Department on October 19, 1977. Jackson Steel reportedly ceased operations at the site in April 1991. Degreasers, including tetrachloroethylene also referred to as perchloroethylene PCE)), trichloroethylene TCE), and 1,1,1-trichloroethane TCA), were used at the site until March 1985. Degreasing sludge was stored in drums on a paved area located southwest of the building. The site property is bordered to the northwestby First Street, to the northeast by an apartment building, to the southeast by a billiard parlor and an electronics store, and to the southwest by a paved parking area, law offices, and a bar/restaurant. The site is located on the edge of a mixed-use area, with commercial and industrial properties located to the south and west and residential properties located to the north and east. The Nassau County Department of Health conducted numerous inspections of the Jackson Steel site between1979 and 1996; improper spill control at the waste storage area was noted once, in 1981, during the period when degreasers were used on site. A Limited Phase II Assessment of the Jackson Steel site was performed in December 1991. During this inspection, a third dry well was observed in the building, in the loading dock. Soil samples collected beneath the dry wells indicated the presence of PCE, TCE, 1,1,1-TCA, 1,2-dichloroethylene DCE), and 1,1-dichloroethane DCA) at depths up to 17 feetbelow ground surface. 1,2-DCE is a degradation product of TCE and PCE and 1,1-DCA is a breakdown product of PCE, TCE, and 1,1,1-TCA. A reconnaissance of the site was conducted in November 1992 as part of an Environmental Site Investigation ESI). Numerous stained areas and puddles were observed in the building. Drums containing petroleum products were stored in the building and on the paved area. The dry wells were partially filled with liquid and a 275-gallon degreasing tank was observed in close proximity

JACKSON STEEL (Continued) **1000272610**

to the dry well located in the loading dock. Between December 1992 and February 1993, numerous samples were collected in, around, and below the dry wells and nine ground water samples at the site. The analytical results reportedly indicated the presence of PCE, TCE, 1,1,1-TCA, and 1,2-DCE at depths up to 40 feet below the ground level and PCE, TCE, 1,1,1-TCA, 1,2-DCE, and 1,1-DCA in ground water collected from monitoring wells located downgradient of the dry wells. The ESI report suggests that a release of PCE, TCE, and 1,1,1-TCA to ground water has occurred from the site. Drinking water within 4 miles of the site is derived from public/municipal supply wells screened in the Upper Glacial, Magothy, and Lloyd Aquifers. The nearest well drawing from the aquifer of concern is located approximately 3,100 feet south and side-gradient to the site. Potable wells within 4 miles of the site, and drawing from the aquifer of concern, serve over 300,000people. Status February 2000): EPA is considering various alternatives for this site. The description of the site is based on information available at the time the site was scored. The description may change as additional informationis gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices.

Alias Comments:	Not reported

Site Description: The Jackson Steel Site includes a parcel of property located at 435 First Street in Mineola, Town of North Hempstead, Nassau County, New York in a residential/commercial area. The 1.5-acre property contains a one-story 43,000-square-foot building formerly used as a metal-forming facility and an approximately 10,000-square foot paved parking area. The building consists of two sections-the original building, constructed in 1959, is located closer to First Street, and the newer section, which was added in 1963, is at the rear. The former office space is located along the north wall, and a loading dock is located in the southwest corner of the front section of the building. The building is currently inactive and predominantly empty, except for miscellaneous small equipment and supplies abandoned by interim tenants of the building. An old vertical aboveground storage tank-possibly used to store degreasing substances-is situated in the front section of the building next to the former offices. A trench is located in the floor along the inside western wall of the building extension, above which a degreasing station is suspected to have been located. Two sumps are located in the front section of the building behind the former office space. One sump is located under the heater and the other one is located along the eastern wall of the main building. A third sump is located outside the building, near the main entrance. A fence extends along the southern border of the parking area and separates the Jackson Steel Site's parking lot from the adjacent commercial property's parking lot. A narrow strip of unpaved soil is also located along the east wall of the building, between the building and the wooden fence separating the Jackson Steel property from the adjacent apartment complex. Subsurface features include two dry wells designed to collect stormwater runoff located under the

JACKSON STEEL (Continued) **1000272610**

parking area to the west of the building and a third dry well located under the loading dock area. The Site is bordered to the north by residential, single-family dwellings, to the east by multiple-family dwellings in a two-story apartment complex, to the south by a former billiards parlor and a building that housed a daycare center until April 2002, and to the west by an office building and restaurant. Herricks Road to the west has predominantly commercial properties on both sides of the heavily traveled road. Village of Mineola supply well #4 and Garden City Village supply well #12 are located within a half-mile radius of the Site (east-southeast or side-gradient of the property). There are no private wells in the area. Area residents utilize municipal water. The property, which has been used for industrial/commercial purposes since it was constructed, has been zoned for a number of different uses through the past several decades. The property is presently zoned B-1 for business use as retail or office space. The Village of Mineola is currently reviewing its master plan; there is likelihood that the Jackson Steel property may be rezoned "residential" in the near future. The property was used from the mid-1970s until 1991 as a "roll form metal shapes" manufacturing facility. Degreasers, including tetrachloroethene (PCE), trichloroethene (TCE), and 1,1,1-trichloroethane (TCA), were used at the facility until 1985. Sludges from degreasing equipment were stored in drums and in an on-property 275-gallon tank. The analytical results from samples collected by the Nassau County Department of Health (NCHD) in the early 1990s from within, around, and below three on-property dry wells indicated the presence of PCE, TCE, 1,1,1-TCA, 1,2-dichloroethylene (DCE), and 1,1-dichloroethane (DCA) at depths down to 40 feet below the ground surface. PCE, TCE, 1,1,1-TCA, 1,2-DCE, and 1,1-DCA were also detected in groundwater samples collected from monitoring wells located downgradient of the dry wells. Dumping of wastes into the dry wells and spills and leaks from drums storing various chemicals during the facility's operations are the likely sources of the contamination found at the Site. In October 1999, the Site was proposed for placement on EPA's Superfund National Priorities List (NPL). On February 4, 2000, the Site was listed on the NPL. EPA initiated a search to identify Potentially Responsible Parties (PRPs) in January 2000. Viable PRPs have not been found. Following commencement of fieldwork in October 2001, because of concerns about the proximity of the Site to a daycare center, NCHD performed air sampling inside the daycare center's building. The air samples detected PCE at levels below the Health Department's guideline for indoor PCE exposure. The levels were also within EPA's acceptable cancer and noncancer risk ranges. Given the sensitivity of the population exposed (preschool children), the Health Department collected additional samples in mid-December 2001. At that time, indoor testing was also conducted inside the Jackson Steel building and a restaurant located adjacent to the Site. The results, which were received in mid-January 2002, indicated that PCE levels in the indoor air of several rooms in the daycare center were above the Health Department's guideline for indoor PCE exposure. In addition, the maximum PCE level exceeded EPA's acceptable noncancer risk level. Low levels of PCE were detected in air samples from the Jackson Steel building and the restaurant. After receiving the daycare center's sampling results, EPA's emergency response team installed a vacuum extraction system under the concrete slab of the daycare center to prevent any contaminants from entering the building in case the soil and groundwater under the building were the source. In addition, in order to provide fresh air circulation in the building, the daycare center's contractor installed a ventilation system. Samples taken to assess the effectiveness of the measures implemented showed that the PCE levels in the air were significantly below the New York State Health Department guideline and below EPA's acceptable noncancer risk levels. Because elevated PCE levels were detected in a former billiards club which shares common walls with the Jackson Steel Site building

JACKSON STEEL (Continued) **1000272610**

and the former daycare center, EPA installed a vacuum extraction system under the concrete slab of both buildings. In addition, ventilation systems were installed in those buildings. A Remedial Investigation (RI) was conducted from 2001 to 2002 to determine the nature and extent of the contamination at and emanating from the Site The Village of Mineola is currently reviewing its master plan; there is a likelihood that the Jackson Steel property may be rezoned "residential" in the near future. The groundwater underlying the Site and downgradient is contaminated. Potable water for the Site and downgradient areas is obtained from public-supply sources. Although it is not likely that the groundwater underlying the property will be used for potable purposes in the foreseeable future, regional groundwater is a sole source of potable water and is designated as a drinking water source by New York State Department of Environmental Conservation (NYSDEC). A Record of Decision (ROD) addressing operable unit (OU) 1 was completed in September 2004. The cleanup of the building, the excavation and removal of the contaminated soil and the contaminated materials from the sumps and the trench inside the building and from the dry wells were completed in early 2006 (170 cubic yards of material were excavated and disposed of). The in-situ soil vapor extraction (ISVE) system, which began operation as a pilot-scale treatability study in July 2005, has, to date, removed approximately 55 pounds of volatile organic compounds (VOCs) from the soil. It is anticipated that the ISVE system will continue to operate for an additional two years before the cleanup goals have been met. Periodic injections of chemicals via a network of 20 injection wells as part of the in-situ chemical oxidation (ISCO) treatment of the Upper Glacial Aquifer at the site are currently underway. Postinjection analytical results from the Upper Glacial Aquifer (April 2007) indicate that the treatment has been effective in reducing contaminant levels. A supplemental groundwater investigation was conducted from March 2005 to September 2006 in an attempt to determine the source of the Magothy Aquifer contamination underneath the site and to establish whether there is a relationship between the contamination at the site and the VOC contamination detected in a nearby municipal well (before treatment). As part of this investigation, six monitoring wells were installed. Three wells were installed in the Magothy Confining Bed at the location of the on-site dry wells. Three additional wells were installed off-site into the Magothy Aquifer. One well is located approximately 300 feet northeast of the site. This well is considered upgradient under regional flow conditions and side gradient when the municipal well is pumping. The second monitoring well is located southwest of the site. This well is considered downgradient under regional flow conditions and side gradient when the municipal well is pumping. The third well is located between the site and Mineola's municipal well, approximately 1,200 feet southeast of the site. This well is considered side gradient under regional flow conditions and downgradient when the municipal well is pumping. The investigation indicates that because of the industrial/ commercial nature of the area, multiple unknown sources appear to contribute to the contamination in the lower reaches of the Magothy Aquifer underlying the site. The investigation showed that the levels of contamination in the Magothy Aquifer increase or decrease in response to whether or not the municipal well is operating. In addition, VOCs were not detected in the three monitoring wells that were installed at various depths in the Magothy Confining Bed underlying the location of the two former dry wells where the disposal of chemicals occurred. In an on-site monitoring well located downgradient or side gradient of the dry wells (depending on whether or not the municipal well is operating), the maximum TCE concentration was 1.6 ug/l and the maximum PCE concentration was 1.2 ug/l (the state and federal groundwater standards for TCE and PCE is 5.0 ug/l). In comparison, the levels of contamination in the underlying Magothy Aquifer, at a depth of 454 feet, ranged from 95-330 ug/l TCE and 78-150 ug/l PCE. An Explanation of Significant Differences (ESD) addressing OU 1 was

JACKSON STEEL (Continued) **1000272610**

completed in August 2007.

Site Description: Location:The Jackson Steel Site is located in an urban area. It is on the southern side of First Street and the Eastern side of Herricks Road. It is located about 1,000 ft. east of the Fulton Avenue class 2 site, a recent addition to the Federal National Priorities List, which is situated in the Garden City Park Industrial Area. Site Features:The main site feature is a 30,000 square foot one story former manufacturing building, constructed in 1959, and a 13,000 square foot back section that was added in 1963. Current Zoning and Land Use:Jackson Steel ceased operations in 1991. The building currently houses a Soil Vapor Extraction system that is operated by USEPA. A restaurant and offices are located immediately west of the site. An industrial park is located west of Herricks Road. Residences are located immediately east of the site, and mixed business / residential on the north side of First Street. The Long Island Railroad is located south of the day care.Past Use of the Site:The property was used from the mid-1970s until 1991 as a "roll form metal shapes" manufacturing facility. Degreasers, including tetrachloroethylene (PCE), trichloroethylene (TCE), and 1,1,1-trichloroethane (TCA), were used at the facility until 1985. Sludges from degreasing equipment were stored in drums and in an on-Site 275-gallon tank. Dumping of wastes into the dry wells, spills, and leaks during the facilitys operations and from drums storing various chemicals are the likely sources of the contamination

JACKSON STEEL (Continued) **1000272610**

found at the Site.In December 1991, a limited environmental assessment of the former Jackson Steel Products property was conducted by Geraghty & Miller, Inc., environmental consultants. A Nassau County Department of Health (NC DOH) survey inspection was conducted at the site in May 1994. In October 1999, the Site was proposed for placement on EPAs Superfund National Priorities List (NPL). On February 4, 2000, the Site was listed on the NPL.Site Geology and Hydrogeology:Site geology consists of three units: the Upper Glacial Aquifer, the Magothy Confining Bed, and the Magothy Aquifer. The Upper Glacial unit consists predominantly of varying consistencies of intermixed to interbedded, brown-orange-yellow sands and gravels that extend to a depth of approximately 105 feet below ground surface (bgs). Some silts were observed mainly near the ground surface, but also in smaller quantities deeper in the formation, and in minor lenses throughout. Little to no clay was observed. Groundwater beneath the Jackson Steel site occurs within the Upper Glacial Aquifer at approximately 50 feet bgs. In this aquifer, a very slight, upward gradient exists but this gradient is negligible when compared to the dominant southwest horizontal groundwater flow.At approximately 105 feet bgs, the top of the Magothy Formation was encountered. The top of the formation consists of characteristic fine to medium sands interbedded with clay and sandy-silty clay, with gray coloration, and the presence of organic lignite (wood) fragments. The classic medium-to-coarse grained, gray sand of the Magothy Formation was observed below the silty-clay unit, beginning at 401 feet bgs at the site. The Magothy Confining Bed has a relatively low permeability and transmissivity resulting in its function as a semi-confining layer separating the transmissive Upper Glacial and Magothy aquifers. A downward groundwater flow gradient was noted within the bed. In the Magothy Aquifer, the trend for downward flow observed in the Magothy Confining Bed continued, but at a lower gradient. Similar to the Upper Glacial Aquifer, the horizontal southwest groundwater flow in this unit is again anticipated to dominate over the vertical flow.

Env Problem:	This property is near an industrial area in which high levels of contamination have been identified and a significant source was pinpointed. The chemicals found at Jackson Steel are similar, and appear to be the source of a separate, probably parallel plume, which may also overlap further downgradient, thereby amplifying the threat to several public supply wells.
Health Problem:	Drinking contaminated groundwater is not expected because public water serves the area. The on-site soil vapor extraction system is designed to protect occupants of the on-site building and two adjacent off-site buildings from exposure via soil vapor intrusion.

Updated By: JBSWARTO
Site Description: Location: The Former Garden Photoengraving Site is located in a light industrial area at 40 Roselle Street, Mineola, NY in Nassau County.Site Features: The site consists of a 2-story commercial building and a parking lot to the east and west. The site is 0.394 acres. Roselle Street is south of the property and a county recharge basin to the north. The surrounding parcels are used for light industrial. Current Zoning/Use(s): The site is currently active and is zoned industrial. Currently, the building is occupied by a dental implants fabrication business (Flexite Corporation Rapid Injection Systems), a cabinet maker, and Somar Insulation. The closest residences are located in an apartment complex 200 feet to the east.Historical Use(s): The building was built in 1953 and has been used as office space, pesticide storage, and as a photoengraving facility. Fumex Pest Control reportedly stored pesticides and herbicides in cargo containers within the building and in sheds in the parking lot from 1992 until 1997. The photoengraving facility, Garden Photoengraving Co., Inc. operated here from 1955 until at least 1977 and would have made extensive use of chemicals. An investigation performed in April 2002, under the oversight of Nassau County Department of Health (NCDH), detected elevated levels of pesticides in the on-site soil and chlorinated solvents in the on-site groundwater. During the 2002 investigation and clean-out of the cesspools under Nassau County Department of Health (NCDH) oversight, no herbicides were detected anywhere, no pesticides were detected in the cesspools, and only low levels of dichlorodiphenyl trichloroethane (DDT) and chlordane were found in soil in the floor drain but at levels less than the soil cleanup objectives. As a result, pesticides are not considered to be one of the contaminants of concern at the site. Public supply wells N0097 and N08576 are located approximately 2,500 feet downgradient of the site.NYSDEC has completed a Preliminary Site Assessment on this site and the adjacent 50 Roselle Street property. The site is currently undergoing a Remedial Investigation.Site Geology and Hydrogeology: Depth to groundwater is 50 ft bgs. Groundwater flow direction is to the south-southwest. Soil is composed mostly of sand and some gravel.
Env Problem: Nature and Extent of Contamination: Contaminated bottom sediments were removed from on site cesspools number 1 through 5 and from drywell 1 and floor drain 1 in 2002 under Nassau County Department of Health (NCDH) oversight. Follow-up investigation directly below cesspool 4 in 2003 detected trichloroethene (TCE) at 474 ppm in the soil (20 feet above the water table) and 630 ppb in the groundwater. Soil below this cesspool was found to be impacted by petroleum

FORMER GARDEN PHOTOENGRAVING CO., INC. (Continued) **S110137791**

hydrocarbons, primarily naphthalene, from 12 to 48 feet below ground surface and groundwater contained 1,085 ppb naphthalene. The 2008-2009 Preliminary Site Assessment detected significant levels of volatile organic compounds in groundwater at the site. Maximum concentrations found were 1000 ppb TCE , 230 ppb tetrachloroethene (PCE), 890 ppb cis-1,2-dichloroethene, and 3200 ppb naphthalene. These contaminants all have groundwater standards of 5 ppb except for naphthalene which has a guidance value of 10 ppb. Significant Threat: This site poses a significant threat to the environment due to the ongoing release of contaminants into the groundwater from the source area cesspools.

Health Problem:	The site is covered by buildings and pavement so contact with contaminated soil is not expected unless excavation occurs. Because public water serves the area and there are no known users of well water in the vicinity, no one is likely to drink contaminated groundwater.

DEC Memo: "07/22/14 1600 Hrs: Checked the database for any prior reports for this address but found none. DR REFERRED TO LAW ENFORCEMENT"
Remarks: "Secretary from the business in the front of the building (Irene Porcelli) witnessed subject from the furniture refinishing business in the back of the building pouring paints or thinners that had been used for the furniture, into the ground outside of the building. Caller states that DEC has taken action against the Ali Moslem subject involving other violations, but the caller cannot recall who it was. Caller stated that as in the past his business had to be evacuated due to fumes vent through the air conditioning system from the painting/varnishing/refinishing activity (which has been reported to the town code enforcement) but the caller wants to report the intensional spill to do what he can to get the Ali Moslem shut down and moved out of the building."

Site Description: The site consists of a commercial building and a paved parking lot located at 50 Roselle Street. The one-story 10,680 sq ft building was constructed on a parcel of 0.4224 acres in 1955 with an addition in 1982. The property was occupied by a metal door and window manufacturer from 1961 to 1972, Richy-Bob Knitting Mill from at least

FORMER RICHY-BOB KNITTING (Continued) **S113916743**

1982 to 1997, and Lewis Oil (under ownership of Windsor Fuel Oil) since 2000. Lewis Oil is currently using the facility as a vehicle and equipment repair shop. A 550-gallon fuel oil UST was removed from the property in 2008. No contaminant concentrations exceeding NYSDEC RSCOs were identified. NYSDEC has completed a Preliminary Site Assessment (PSA) on this site and the adjacent 40 Roselle Street property, due to the proximity of the contamination to both properties. Although the PSA found no contaminants of concern (COCs) in the groundwater on the site, COCs were found directly downgradient of the site (approximately 30 ft south). COCs were identified in significant levels in the soil vapor underneath the sub-slab of the building. Public supply wells N0097 and N08576 are located approximately 2,500 feet downgradient of the site. A Remedial Investigation is currently unnderway at the 40 Roselle Street property under NYSDEC Site No. 130174. A supplemental Site Characterization was completed in April 2012. It found that no source of contamination was found on the 50 Roselle Street property. Based on an assessment for significant threat determination, it is found that the site does not qualify for the Registry and has been reclassified to N.

Site Description: Location: The Fumex Sanitation site is an inactive hazardous waste located on the corner of Bedford Avenue and Main Street (also known as Herricks Road) at 131 Herricks Road in the Village of Garden City Park in the Town of North Hempstead, Nassau County, New York. Site Features: The 0.24 acre site includes a one-story brick building and a paved parking area in the rear. The site is bordered on the north by Bedford Avenue, Herricks Road on the east, residential property to the west, and commercial property to the south. Access to the site is from the Bedford Avenue. Current Zoning/Use(s): The site is currently inactive, and is zoned for commercial use. The surrounding parcels

FUMEX SANITATION (Continued) **1002986042**

are currently used for a combination of residential, commercial, light industrial, and utility right-of-ways. A residential area borders the site to the west along Bedford Avenue.Historic Use(s): Fumex Termite Service Corporation operated a commercial termite extermination business at this location from 1952 to 1992. Reportedly, the originally unpaved parking lot was sprayed regularly with chlordane for insect control from 1952 to 1978. The parking lot was then paved sometime between 1978 and 1981. In 1981, a chlordane rinse water spill of less than 30 gallons occurred in the asphalt parking lot. Some of the rinse water entered a dry well located within the parking lot. Site investigations have confirmed that chlordane and other pesticides contaminated soil and the groundwater beneath the site and the soil of a neighboring yard.Site Geology and Hydrogeology: Beneath the Fumex Sanitation site are approximately 800 feet of unconsolidated deposits overlying crystalline bedrock. The shallowest soils beneath the site are the Upper Glacial formation. The Upper Glacial formation consists of Pleistocene age outwash sands and gravels and is approximately 100 feet thick in the vicinity of the Fumex Sanitation site. The depth to groundwater is approximately 40 to 50 feet below grade. Shallow groundwater flow is generally to the southwest. Immediately beneath the Upper Glacial formation is the Magothy formation. The Magothy is composed of sands with intermittent clay layers and is 300 to 400 feet thick in the vicinity of the site. The Magothy formation is used as the primary aquifer for public drinking water in Nassau County, with most wells screened 300-400 feet below the water table. Beneath the Magothy formation is the Raritan formation, consisting of the Raritan clay and the Lloyd sand. The Raritan formation is approximately 300 feet thick and overlies bedrock.

Env Problem: Remediation at the site is complete. Environmental and Institutional controls in place.Prior to remediation, the primary contaminants of concern were heptachlor, chlordane, and dieldrin in the soil and groundwater. Groundwater samples, collected from on-site and off-site monitoring wells, continue to indicate that heptachlor, chlordane and dieldrin detected in the on-site monitoring wells is not migrating off-site.

Health Problem: Some contaminated soils remain at the site below concrete or clean backfill, however, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

The Upper Glacial formation consists of Pleistocene age outwash sands and gravels and is approximately 100 feet thick in the vicinity of the Fumex Sanitation site. The depth to groundwater is approximately 40 to 50 feet below grade. Shallow groundwater flow is generally to the southwest. Immediately beneath the Upper Glacial formation is the Magothy formation. The Magothy is composed of sands with intermittent clay layers and is 300 to 400 feet thick in the vicinity of the site. The Magothy formation is used as the primary aquifer for public drinking water in Nassau County, with most wells screened 300-400 feet below the water table. Beneath the Magothy formation is the Raritan formation, consisting of the Raritan clay and the Lloyd sand. The Raritan formation is approximately 300 feet thick and overlies bedrock.

Env Problem: Remediation at the site is complete. Environmental and Institutional controls in place.Prior to remediation, the primary contaminants of concern were heptachlor, chlordane, and dieldrin in the soil and groundwater. Groundwater samples, collected from on-site and off-site monitoring wells, continue to indicate that heptachlor, chlordane and dieldrin detected in the on-site monitoring wells is not migrating off-site.

Health Problem: Some contaminated soils remain at the site below concrete or clean backfill, however, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

Site Code: 55772
Site Description: Location: The Fumex Sanitation site is an inactive hazardous waste located on the corner of Bedford Avenue and Main Street (also known as Herricks Road) at 131 Herricks Road in the Village of Garden City Park in the Town of North Hempstead, Nassau County, New York. Site Features: The 0.24 acre site includes a one-story brick building and a paved parking area in the rear. The site is bordered on the north by Bedford Avenue, Herricks Road on the east, residential property to the west, and commercial property to the south. Access to the site is from the Bedford Avenue. Current Zoning/Use(s): The site is currently inactive, and is zoned for commercial use. The surrounding parcels are currently used for a combination of residential, commercial, light industrial, and utility right-of-ways. A residential area borders the site to the west along Bedford Avenue.Historic Use(s): Fumex Termite Service Corporation operated a commercial termite extermination business at this location from 1952 to 1992. Reportedly, the originally unpaved parking lot was sprayed regularly with chlordane for insect control from 1952 to 1978. The parking lot was then paved sometime between 1978 and 1981. In 1981, a chlordane rinse water spill of less than 30 gallons occurred in the asphalt parking lot. Some of the rinse water entered a dry well located within the parking lot. Site investigations have confirmed that chlordane and other pesticides contaminated soil and the groundwater beneath the site and the soil of a neighboring yard.Site Geology and Hydrogeology: Beneath the Fumex Sanitation site are approximately 800 feet of unconsolidated deposits overlying crystalline bedrock. The shallowest soils beneath the site are the Upper Glacial formation. The Upper Glacial formation consists of Pleistocene age outwash sands and gravels and is approximately 100 feet thick in the vicinity of the Fumex Sanitation site. The depth to groundwater is approximately 40 to 50 feet below grade. Shallow groundwater flow is generally to the southwest. Immediately beneath the Upper Glacial formation is the Magothy formation. The Magothy is composed of sands with intermittent clay layers and is 300 to 400 feet thick in the vicinity of the site. The Magothy formation is used as the primary aquifer for public drinking water in Nassau County, with most wells screened 300-400 feet below the water table. Beneath the Magothy formation is the Raritan formation, consisting of the Raritan clay and the Lloyd sand. The Raritan formation is approximately 300 feet thick and overlies bedrock.

Site Description: Location: The Fumex Sanitation site is an inactive hazardous waste located on the corner of Bedford Avenue and Main Street (also known as Herricks Road) at 131 Herricks Road in the Village of Garden City Park in the Town of North Hempstead, Nassau County, New York. Site Features: The 0.24 acre site includes a one-story brick building and a paved parking area in the rear. The site is bordered on the north by Bedford Avenue, Herricks Road on the east, residential property to the west, and commercial property to the south. Access to the site is from the Bedford Avenue. Current Zoning/Use(s): The site is currently inactive, and is zoned for commercial use. The surrounding parcels are currently used for a combination of residential, commercial, light industrial, and utility right-of-ways. A residential area borders the site to the west along Bedford Avenue.Historic Use(s): Fumex Termite Service Corporation operated a commercial termite extermination business at this location from 1952 to 1992. Reportedly, the originally unpaved parking lot was sprayed regularly with chlordane for insect control from 1952 to 1978. The parking lot was then paved sometime between 1978 and 1981. In 1981, a chlordane rinse water spill of less than 30 gallons occurred in the asphalt parking lot. Some of the rinse water entered a dry well located within the parking lot. Site investigations have confirmed that chlordane and other pesticides contaminated soil and the groundwater beneath the site and the soil of a neighboring yard.Site Geology and Hydrogeology: Beneath the Fumex Sanitation site are approximately 800 feet of unconsolidated deposits overlying crystalline bedrock. The shallowest soils beneath the site are the Upper Glacial formation. The Upper Glacial formation consists of Pleistocene age outwash sands and gravels and is approximately 100 feet thick in the vicinity of the Fumex Sanitation site. The depth to groundwater is approximately 40 to 50 feet below grade. Shallow groundwater flow is generally to the southwest. Immediately beneath the Upper Glacial formation is the Magothy formation. The Magothy is composed of sands with intermittent clay layers and is 300 to 400 feet thick in the vicinity of the site. The Magothy formation is used as the primary aquifer for public drinking water in Nassau County, with most wells screened 300-400 feet below the water table. Beneath the Magothy formation is the Raritan formation, consisting of the Raritan clay and the Lloyd sand. The Raritan formation is approximately 300 feet thick and overlies bedrock.
Env Problem: Remediation at the site is complete. Environmental and Institutional controls in place.Prior to remediation, the primary contaminants of concern were heptachlor, chlordane, and dieldrin in the soil and groundwater. Groundwater samples, collected from on-site and off-site monitoring wells, continue to indicate that heptachlor, chlordane and dieldrin detected in the on-site monitoring wells is not migrating off-site.
Health Problem: Some contaminated soils remain at the site below concrete or clean backfill, however, people will not come in contact with contaminated

FUMEX SANITATION (Continued) **1002986042**

soils unless they dig below the surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

Site Code: 55772
Site Description: Location: The Fumex Sanitation site is an inactive hazardous waste located on the corner of Bedford Avenue and Main Street (also known as Herricks Road) at 131 Herricks Road in the Village of Garden City Park in the Town of North Hempstead, Nassau County, New York. Site Features: The 0.24 acre site includes a one-story brick building and a paved parking area in the rear. The site is bordered on the north by Bedford Avenue, Herricks Road on the east, residential property to the west, and commercial property to the south. Access to the site is from the Bedford Avenue. Current Zoning/Use(s): The site is currently inactive, and is zoned for commercial use. The surrounding parcels are currently used for a combination of residential, commercial, light industrial, and utility right-of-ways. A residential area borders the site to the west along Bedford Avenue.Historic Use(s): Fumex Termite Service Corporation operated a commercial termite extermination business at this location from 1952 to 1992. Reportedly, the originally unpaved parking lot was sprayed regularly with chlordane for insect control from 1952 to 1978. The parking lot was then paved sometime between 1978 and 1981. In 1981, a chlordane rinse water spill of less than 30 gallons occurred in the asphalt parking lot. Some of the rinse water entered a dry well located within the parking lot. Site investigations have confirmed that chlordane and other pesticides contaminated soil and the groundwater beneath the site and the soil of a neighboring yard.Site Geology and Hydrogeology: Beneath the Fumex Sanitation site are approximately 800 feet of unconsolidated deposits overlying crystalline bedrock. Program: HW
Site Code: 58432
Classification: Does not present a significant threat to the public health or the environment - action may be deferred.
Region: 1
Acres: Not reported
HW Code: 130073E
Record Add: 11/18/1999
Record Upd: 06/06/2007
Updated By: JBSWARTO
Site Description: This property consists of a one-story, 11,200 square foot masonry building which houses an active heating, ventilation and air conditioning contractor (Conair) in the front (northern) portion and a snack food distributor (Bonaire) in the rear (southern) portion. The rear portion of the building was occupied by Town Sheet Metal Works, Inc. from 1975 until September 1985. Operations at the site reportedly involved fabrication of sheet metal, particularly duct work. A 1986 NCDH report identified regional groundwater contamination in the Garden City Park Industrial Area (GCPIA). The plume consisted of volatile organic compounds (VOCs), predominantly chlorinated solvents, including tetrachloroethene (PCE), trichloroethene (TCE), 1,2-dichloroethene (1,2-DCE) and 1,1,1-trichloroethane (TCA). A follow-up investigation by NCDH and the Nassau County Department of Public Works (NCDPW) in 1993 confirmed elevated VOCs, in particular PCE, in groundwater within the GCPIA. In 1994, an area-wide Preliminary Site Assessment (PSA) was performed in the GCPIA, to identify potential sources of the VOC contamination. The results of sampling conducted during that investigation led the NYSDEC to conduct PSAs in 1995 at four facilities that had been identified as potential sources. Samples collected from locations upgradient of the Town Sheet Metal facility contained PCE, TCE, and TCA concentrations ranging from below detection limits (BDL) to 8.2, 1.2 and 3.6 micrograms per liter (ug/l) respectively. No upgradient samples contained 1,2-DCE. Downgradient samples for PCE, TCE and 1,2-DCE ranged from BDL to 9.6, 1.8 and 2.4 ug/l, but TCA ranged from 4.7 to 59 ug/l. The similar upgradient and downgradient PCE, TCE and 1,2-DCE results implied that there was an upgradient source for these compounds. The distribution of TCA, however, suggested that there was a source in the vicinity of the Town Sheet Metal Site. In the 1999 focused PSA, which was conducted in response to the 1995 PSA, TCA was detected in two on-site sediment samples and was again found at higher levels in downgradient versus upgradient groundwater. The degree of threat posed by this contamination source was judged not to be significant.
Env Problem: Both sediment and groundwater data indicate that 1,1,1-trichloroethane was disposed at this facility in the past. However, the levels are relatively low and do not present a significant threat.
Health Problem: There is some evidence that volatile organic compounds (VOCs) were

TOWN SHEET METAL WORKS (Continued) **S105586277**

discharged into on-site drains. Only very low concentrations of contamination remain and they do not present a threat to public health. Groundwater at the site has been contaminated with VOCs at concentrations slightly above groundwater standards. A large VOC contaminant plume from the nearby 150 Fulton Avenue site and other sources is present downgradient from this site. Public water supply wells in the area of this larger regional contaminant plume are monitored for VOCs and treated if necessary.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

HIST LTANKS: Listing of Leaking Storage Tanks

A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database. Department of Environmental Conservation.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Data Release Frequency: Varies

HIST SPILLS: SPILLS Database
This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

SPILLS 90: SPILLS90 data from FirstSearch

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

SPILLS 80: SPILLS80 data from FirstSearch

Spills 80 includes those spill and release records available from FirstSearch databases prior to 1990. Typically, they may include chemical, oil and/or hazardous substance spills recorded before 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 80.
